Theory and Explanation in Geography Henry Wai-chung Yeung, 2023-08-15 THEORY AND EXPLANATION IN GEOGRAPHY "With this book Henry Yeung puts Geography back into the driver's seat of new theory development. Foregrounding mid-range theories and mechanism-based explanations, he offers a pragmatic approach that has the capacity to shape the wider social sciences for years to come. The timing of this intervention is pitch-perfect, as scholars search for ways to understand and intervene in an increasingly distrustful and polarized world." -KATHARYNE MITCHELL, Distinguished Professor, University of California, Santa Cruz, USA "Critical human geography possesses a distinctive theory culture-pluralist, creative, distributed, restless, contested-prone to "turning," wary of orthodoxies and fixed positions. In this original and provocative contribution, the leading economic geographer Henry Yeung steps out beyond his home turf to engage styles and practices of theorizing across this diverse field, carving out a new remit and rubric for middle-range theorizing." -JAMIE PECK, Canadian Research Chair and Distinguished University Scholar, University of British Columbia, Canada Grounded in a generous reading of a multitude of critical approaches in human geography and their diverse conceptions of theory, *Theory and Explanation in Geography* draws upon cutting-edge debates on the mechanism-based approach to theory and explanation in analytical sociology, political science, and the philosophy of social sciences to inform current and future geographical thinking on theory. This consolidated conceptual work represents an extension and much further development of the author's well-cited works on relational geography, critical realism and causal explanation, process-based methodology, globalization and the theory of global production networks, and "theorizing back" and situated knowledges that were published in leading journals in Geography. The work has several chapters that identify new directions for Geography's current and future engagement with the wider social sciences and relevant research agendas in geographical thought. Its main chapters provide the necessary conceptual toolkits for mobilizing such an expanding research program in the 2020s and beyond. Compared to typical texts on geographical thought, this book is less retrospective and historical and more prospective in nature. Detailing why and how mid-range explanatory theories can be better developed through causal mechanisms and relational thinking that have been revitalized in the social sciences, *Theory and Explanation in Geography* is an essential read for academics, geographers, and scholars seeking unique perspective on an important facet of the field.

Geocomputation with R Robin Lovelace, Jakub Nowosad, Jannes Muenchow, 2019-03-22 Geocomputation with R is for people who want to analyze, visualize and model geographic data with open source software. It is based on R, a statistical programming language that has powerful data processing, visualization, and geospatial capabilities. The book equips you with the knowledge and skills to tackle a wide range of issues manifested in geographic data, including those with scientific, societal, and environmental implications. This book will interest people from many backgrounds, especially Geographic Information Systems (GIS) users interested in applying their domain-specific knowledge in a powerful open source language for data science, and R users interested in extending their skills to handle spatial data. The book is divided into three parts: (I) Foundations, aimed at getting you up-to-speed with geographic data in R, (II) extensions, which covers advanced techniques, and (III) applications to real-world problems. The chapters cover progressively more advanced topics, with early chapters providing strong foundations on which the later chapters build. Part I describes the nature of spatial datasets in R and methods for manipulating them. It also covers geographic data import/export and transforming coordinate reference systems. Part II represents methods that build on these foundations. It covers advanced map making (including web mapping), bridges to GIS, sharing reproducible code, and how to do cross-validation in the presence of spatial autocorrelation. Part III applies the knowledge gained to tackle real-world problems, including representing and modeling transport systems, finding optimal locations for stores or services, and ecological modeling. Exercises at the end of each chapter give you the skills needed to tackle a range of geospatial problems. Solutions for each chapter and supplementary materials providing extended examples are available at <https://geocompr.github.io/geocompkg/articles/>. Dr. Robin Lovelace is a University Academic Fellow at the University of Leeds, where he has taught R for geographic research over many years, with a focus on transport systems. Dr. Jakub Nowosad is an Assistant Professor in the Department of Geoinformation at the Adam Mickiewicz University in Poznan, where his focus is on the analysis of large datasets to understand environmental processes. Dr. Jannes Muenchow is a Postdoctoral Researcher in the GIScience Department at the University of Jena, where he develops and teaches a range of geographic methods, with a focus on ecological modeling, statistical geocomputing, and predictive mapping. All three are active developers and work on a number of R packages, including stplanr, sabre, and RQGIS.

Geography in America at the Dawn of the 21st Century Gary L. Gaile,Cort J. Willmott,2005
Geography in America at the Dawn of the 21st Century surveys American geographers' current research in their specialty areas and tracks trends and innovations in the many subfields of geography. As such, it is both a 'state of the discipline' assessment and a topical reference. It includes an introduction by the editors and 47 chapters, each on a specific specialty. The authors of each chapter were chosen by their specialty group of the American Association of Geographers (AAG). Based on a process of review and revision, the chapters in this volume have become truly representative of the recent scholarship of American geographers. While it focuses on work since 1990, it additionally includes related prior work and work by non-American geographers. The initial Geography in America was published in 1989 and has become a benchmark reference of American geographical research during the 1980s. This latest volume is completely new and features a preface written by the eminent geographer, Gilbert White.
