Geocoding Health Data Gerard Rushton,Marc P. Armstrong,Josephine Gittler,Barry R. Greene,Claire E. Pavlik,Michele M. West,Dale L. Zimmerman,2007-11-19 In the past, disease pattern mapping depended on census tracts based on political units, such as states and counties. However, with the advent of geographic information systems (GIS), researchers can now achieve a new level of precision and flexibility in geographic locating. This emerging technology allows the mapping of many different kinds of geographies, including disease rates in relation to pollution sources. Geocoding Health Data presents a state-of-the-art discussion on the current technical and administrative developments in geographic information science. In particular, it discusses how geocoded residential addresses can be used to examine the spatial patterns of cancer incidence, staging, survival, and mortality. The book begins with an introduction of various codes and their uses, including census geographic, health area, and street level codes. It goes on to describe the specific application of geocodes to cancer, detailing methods, materials, and technical issues. The text illustrates how to compile data maps for analysis and addresses issues, such as mismatch correction and data quality. It describes the current state of geocoding practices and discusses the use of individually geocoded cancer incidences in spatial epidemiology, distance estimation and spatial accessibilities, and tips for handling non-geocoded cases. Special consideration is given to privacy and confidentiality issues by focusing on disclosure limitation methods. With recent disease outbreaks and escalating concerns about bioterrorism, interest in the application of GIS to individual data is growing. The fundamental concepts presented by this book are of great value to anyone trying to understand the causes, prevention, and control of cancer as well as a variety of other diseases.

ArcGIS 9 Scott Crosier,2004 This book is a useful reference for geocoding in ESRI ArcGIS Desktop products ArcInfo, ArcEditor, and ArcView. Geocoding enables you to create and manage address locators and use them to locate an individual address or table of addresses. The geocoding results can be mapped and viewed directly or used to analyze the distribution of addresses, intersections, or other predominant features. Whether you are mapping crime locations or planning the best routes to your customers, geocoding provides the building blocks for mapping and analyzing address data. A quick-start tutorial provides an overview of how to execute the basic linear referencing functions. The book also includes concise, step-by-step, fully illustrated examples.

An Evaluation of Geocoding Practices Yuen-Yan Ma,2017-01-26 This dissertation, An Evaluation of Geocoding Practices by Yuen-yan, Ma, ☑ ☑ ☑ , was obtained from The University of Hong Kong (Pokfulam, Hong Kong) and is being sold pursuant to Creative Commons: Attribution 3.0 Hong Kong License. All rights not granted by the above license are retained by the author. Abstract: Abstract of dissertation entitled An Evaluation of Geocoding Practices Submitted by MA Yuen Yan for the degree of Master of Geographic Information Systems at The University of Hong Kong in June 2005 All Geographic Information Systems (GIS) applications need data, and data recognizes the reliability and the accuracy of the results. Location mapping in GIS requires address information to identify the exact location of an event which helps to analyze location-based problems. Address is therefore the core of GIS and very essential to any spatial analysis such as to identify where the patients locate, to correlate if the spreading patterns an infectious disease are related to the locations of patients, or to answer question about where the obese residents are, whether the locations of fast food shops or the locations of their homes and working places relate to the causes of obesity. Address is a mean to identify where a place or an event is in written format. People always use addresses in identifying locations, commonly use in postal delivery to communicate with a person or organization in another place. However, these addresses are always in alphanumeric format, which are difficult to apply in GIS analyses. In order to digitize the addresses, geocoding is a process that is specifically used in GIS to enhance the spatial characteristic of the addresses. Geocoding is always a core topic in the world of studying GIS. Its function of assigning coordinates to locations can help to locate addresses on maps. In this research, various types of geocoding method will be explored and the geocoding practices in different parts of the world will also be studied. Address database and address structure in different places will be evaluated so as to find out the relationship between them and the use of geocoding system. Area of Hong Kong is relatively small that people can reach the place easily without the helping of address guidelines. As a matter of less concern, the geocoding practice in Hong Kong cannot claim to be efficient or well-organized. Large amount of time or human resources is needed for analyzing and preprocessing the addresses before continuing any geocoding processes because addresses in Hong Kong are not standardized, and includes both Chinese and English versions. Since the lack of standardization and guidance, different people have different ideas on writing the addresses according to their own preferences and the interpretation of what an address is. Without a mutual standard on the component and structure of address, there will be difficulties in processing geocoding. This research will therefore specifically use Hong Kong as an example to find out the major constraints in carrying geocoding. A small-scale survey will be conducted for getting addresses in written format filled by a group of people in HK. This data will then be examined to identify the difference between each written address and to determine what the key components are for making a standard address in Hong Kong. Finally, the study will contribute to a better understanding on geocoding and a comprehensive idea about the effective usage of geocoding system for different applications in GIS. GIS Processing Geocoded Satellite Images Jonathan Williams,2001-09-15 This work opens with the basic techniques of satellite geocoding (including the use of GPS and mosaic production) before describing a wide range of algorithms for extraction of information from optical and radar satellite images. It then moves on to address the derivation of topographic information from space (including the Shuttle Topographic Radar Mission) followed by an explanation of the added-value obtained through the integrated use of geocoded satellite data in a geographic information system (GIS). Practical commercial and scientific applications

are described in detail - first looking at land applications such as agriculture and civil engineering and then at the oceanographic, atmospheric and cryospheric worlds. Jonathan Williams reviews developments in environmental monitoring and global security such as hazard and disaster monitoring, population dynamics and space missions dedicated to environmental monitoring (such as the Earth Observing System and the European ENVISAT Mission).

It also includes new chapters on application areas such as LBSs for public health, indoor navigation, and advertising. In addition, the chapter on remote sensing has been revised to address advancements.

Spatial Analysis in Health Geography Pavlos Kanaroglou,Eric Delmelle,2016-03-09 Presenting current research on spatial epidemiology, this book covers topics such as exposure, chronic disease, infectious disease, accessibility to health care settings and new methods in Geographical Information Science and Systems. For epidemiologists, and for the management and administration of health care settings, it is critical to understand the spatial dynamics of disease. For instance, it is crucial that hospital administrators develop an understanding of the flow of patients over time, especially during an outbreak of a particular disease, so they can plan for appropriate levels of staffing and to carry out adaptive prevention measures. Furthermore, understanding where and why a disease occurs at a certain geographic location is vital for decision makers to formulate policy to increase the accessibility to health services (either by prevention, or adding new facilities). Spatial epidemiology relies increasingly on new methodologies, such as clustering algorithms, visualization and space-time modelling, the domain of Geographic Information Science. Implementation of those techniques appears at an increasing pace in commercial Geographic Information Systems, alongside more traditional techniques that are already part of such systems. This book provides the latest methods in GI Science and their use in health related problems.

Smart Use of State Public Health Data for Health Disparity Assessment Ge Lin,Ming Qu,2018-09-03 Health services are often fragmented along organizational lines with limited communication among the public health–related programs or organizations, such as mental health, social services, and public health services. This can result in disjointed decision making without necessary data and knowledge, organizational fragmentation, and disparate knowledge development across the full array of public health needs. When new questions or challenges arise that require collaboration, individual public health practitioners (e.g., surveillance specialists and epidemiologists) often do not have the time and energy to spend on them. Smart Use of State Public Health Data for Health Disparity Assessment promotes data integration to aid crosscutting program collaboration. It explains how to maximize the use of various datasets from state health departments for assessing health disparity and for disease prevention. The authors offer practical advice on state public health data use, their strengths and weaknesses, data management insight, and lessons learned. They propose a bottom-up approach for building an integrated public health data warehouse that includes localized public health data. The book is divided into three sections: Section I has seven chapters devoted to knowledge and skill preparations for recognizing disparity issues and integrating and analyzing local public health data. Section II provides a systematic surveillance effort by linking census tract poverty to other health disparity dimensions. Section III provides in-depth studies related to Sections I and II. All data used in the book have been geocoded to the census tract level, making it possible to go more local, even down to the neighborhood level.
