Global Satellite Meteorological Observation (GSMO)

Theory Stojče Dimov Ilčev, 2017-10-11 This book presents the principal structure of space systems, functionality, media and applications for modern remote sensing, transmission systems, meteorological antennas, propagation meteorological observation and transferring weather data from satellite to the ground infrastructures and users. The book starts with a short background to the development of Radio and Space systems including overview, concepts and applications of satellite communications in function of transfer meteorological observation data and images. It goes on to discuss the fundamental principles of the space platforms and orbital parameters, laws of satellite motions, new types of launching systems, satellite orbits and geometric relations, spacecraft configuration, payload structure, type of onboard antenna systems, satellite orbits and components of satellite bus. The author also provides comprehensive coverage of baseband and transmission systems, fundamentals of atmospheric electromagnetic radiation, satellite meteorological parameters and instruments, and research and applications in antenna systems and propagation. This is a companion book of Global Satellite Meteorological Observation Applications (Springer).

Global Mobile Satellite Communications Theory Stojče

Dimov Ilčev, 2016-09-23 This book discusses current theory regarding global mobile satellite communications (GMSC) for maritime, land (road and rail), and aeronautical applications. It covers how these can enable connections between moving objects such as ships, road and rail vehicles and aircrafts on one hand, and on the other ground telecommunications subscribers through the medium of communications satellites, ground earth stations, Terrestrial Telecommunication Networks (TTN), Internet Service Providers (ISP) and other wireless and landline telecommunications providers. This new edition covers new

developments and initiatives that have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits and projects of new hybrid satellite constellations. The book presents current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphics, illustrations and mathematics equations. The first edition of Global Mobile Satellite Communications (Springer, 2005) was split into two books for the second edition—one on applications and one on theory. This book presents global mobile satellite communications theory.

Global Satellite Meteorological Observation (GSMO)

Applications Stojče Dimov Ilčev, 2018-12-05 This book presents principal structures of space systems functionality of meteorological networks, media and applications for modern remote sensing, transmission systems, meteorological ground and users segments and transferring weather data from satellite to the ground infrastructures and users. The author presents techniques and different modes of satellite image interpretation, type of satellite imagery, spectral imaging properties, and enhancement of imaging technique, geo-location and calibration, atmospheric and surface phenomena. Several satellite meteorological applications are introduced including common satellite remote sensing applications, weather analysis, warnings and prediction, observation and measurements of meteorological variables, atmosphere and surface applications, ocean and coastal applications, land, agriculture and forestry applications, and maritime and aviation satellite weather applications. The author also covers ground segment and user segment in detail. The final chapter looks to the future, covering possible space integrations in meteorological and weather observation. This is a companion book of Global Satellite Meteorological Observation Theory (Springer), which provides the following topics: Evolution of meteorological observations and history satellite meteorology

Synoptic Analysis and Forecasting Shawn Milrad,2017-11-16
Synoptic Analysis and Forecasting: An Introductory Toolkit
provides the bridge between the introductory fundamentals of a
meteorology course and advanced synoptic-dynamic analysis for
undergraduate students. It helps students to understand the
principles of weather analysis, which will complement computer
forecast models. This valuable reference also imparts qualitative
weather analysis and forecasting tools and techniques to non-
meteorologist end users, such as emergency/disaster managers,
aviation experts, and environmental health and safety experts
who need to have a foundational knowledge of weather
forecasting. Presents the fundamentals of weather analysis and
forecasting Offers clear accessible writing aimed at students from
a variety of mathematical backgrounds Discusses the reading and
interpretation of surface observations and METAR code,
processes associated with the motion and intensity of cyclones
and anticyclones, and quantitative and/or qualitative diagnosis of
processes associated with ascent and descent

Data Assimilation for Atmospheric, Oceanic and Hydrologic Applications (Vol. IV) Seon Ki Park,Liang Xu,2021-11-09 This book contains the most recent progress in data assimilation in meteorology, oceanography and hydrology including land surface. It spans both theoretical and applicative aspects with various methodologies such as variational, Kalman filter, ensemble, Monte Carlo and artificial intelligence methods. Besides data assimilation, other important topics are also covered including adaptive observations, sensitivity analysis, parameter estimation and AI applications. The book is useful to individual researchers as well as graduate students for a reference in the field of data assimilation.
