Rio de Janeiro José L. S. Gámez,Zhongjie Lin,Jeffrey S. Nesbit,2019-06-25 Using Rio de Janeiro as the case study city, this book highlights and examines issues surrounding the development of mega-cities in Latin America and beyond. Complex dynamics of urbanization such as mega-event-driven development, infrastructure investment, and informal urban expansion are intertwined with changing climatic conditions that demand new approaches to sustainable urbanism. The urban conditions facing 21st century cities such as Rio emphasize the need to revisit urban forms, reintegrate infrastructure, and re-evaluate practices. With contributions from 15 scholars from several countries exploring urbanism, urbanization, and climate change, this book provides insights into the contextual and environmental issues shaping Rio in the age of globalization. Each of the book's three sections addresses an interdisciplinary range of topics impacting urbanism in Latin America, which will be accessible to researchers and professionals interested in urbanization, urban design, sustainability, planning, and architecture.

Protest Movements as Media Vehicles of the Brazilian New Right Nicole

McLean,2022-09-08 This book investigates right-wing populism in Brazil. It is a unique study of the

major protest movements of the New Right that dominated the streets of São Paulo from 2014 to 2018 and acted as a prelude to Jair Bolsonaro's election. Examining the populist rhetoric that circulated among the movements' online followers, McLean reveals the formation of different right-wing publics and gives insight into the topics that have the greatest impact on public political debate. Through interviewing multiple activists and observing them at political events, McLean also exposes motivations for engaging in political action and demonstrates how the movements act as media vehicles of the New Right. Such an intimate study on the Brazilian New Right has never before been carried out in such in-depth detail.

Urban Operating Systems Andres Luque-Ayala, Simon Marvin, 2020-12-15 A new wave of enthusiasm for smart cities, urban data, and the Internet of Things has created the impression that computation can solve almost any urban problem. Subjecting this claim to critical scrutiny, in this book, Andrés Luque-Ayala and Simon Marvin examine the cultural, historical, and contemporary contexts in which urban computational logics have emerged. They consider the rationalities and techniques that constitute emerging computational forms of urbanization, including work on digital urbanism, smart cities, and, more recently, platform urbanism. They explore the modest potentials and serious contradictions of reconfiguring urban life, city services, and urban-networked infrastructure through computational operating systems—an urban OS. Luque-Ayala and Marvin argue that in order to understand how digital technologies transform and shape the city, it is necessary to analyze the underlying computational logics themselves. Drawing on fieldwork that stretches across eleven cities in American, European, and Asian contexts, they investigate how digital products, services, and ecosystems are reshaping the ways in which the city is imagined, known, and governed. They discuss the reconstitution of the contemporary city through digital technologies, practices, and techniques, including data-driven governance, predictive analytics, digital mapping, urban sensing, digitally enabled control rooms, civic hacking, and open data narratives. Focusing on the relationship between the emerging operating systems of the city and their traditional infrastructures, they shed light on the political implications of using computer technologies to understand and generate new urban spaces and flows.
