**International Financial Statistics, April 2018** International Monetary Fund. Statistics Dept.,2018-03-28 This paper discusses that for each quarter, the IMF prepares a financial transactions plan, in which it indicates the amounts of particular currencies and SDRs to be used during the relevant period. The IMF selects the currencies of members with strong balance of payments and reserve positions. It also seeks to promote, over time, balanced positions in the IMF. The effects of IMF transactions and operations are summarized in the IMF's holdings of members' currencies and in two other measures: reserve position in the IMF, and total IMF credit and loans outstanding. The IMF's holdings of a member's currency reflect, among other things, the transactions and operations of the IMF in that currency. This concept is used in calculating the amounts that a member can draw under tranche policies and in respect to certain of its obligations to the IMF.

*International Financial Statistics, March 2018* International Monetary Fund. Statistics Dept.,2018-03-01 This paper discusses that for countries that have introduced new currencies, the rates shown in International Financial Statistics (IFS) for the period before the introduction of the most recent currency may be used as conversion factors—they may be used to convert national currency in IFS to US dollar or SDR. In such cases, the factors are constructed by chain linking the exchange rates of the old and the new currencies. The basis used is the value of the new currency relative to the old currency, as established by the issuing agency at the time the new currency was introduced. Notes on the introduction of new currencies can be found in the Country Notes or in IFS print publication (if recent). Data on members' IMF accounts are presented in the Fund Position section in the country tables and in four world tables. Terms and concepts of IMF accounts and the time series in the country and world tables are explained below.
