Tense and Text in Classical Arabic Michal Marmorstein,2016-03-21 In Tense and Text in Classical Arabic, Michal Marmorstein presents a new discourse-oriented analysis of the indicative tense system

in Classical Arabic. Critical of commonly held assumptions regarding the binary structure of the tense system and the perfect-imperfect asymmetry, the author redefines the discussion by analysing the extended syntactic and textual environments in which the paradigm of the indicative forms is used. The study shows that the function of Classical Arabic tenses is determined by the interaction of their inherent grammatical meaning and the overall dialogic, narrative, or generic contexts in which they occur. It also demonstrates the particularizing effect of context, so that temporal and aspectual meanings are always more nuanced, delicate, and pragmatically motivated in actual discourse.

The Go Programming Language Alan A. A. Donovan, Brian W. Kernighan, 2015-11-16 The Go Programming Language is the authoritative resource for any programmer who wants to learn Go. It shows how to write clear and idiomatic Go to solve real-world problems. The book does not assume prior knowledge of Go nor experience with any specific language, so you'll find it accessible whether you're most comfortable with JavaScript, Ruby, Python, Java, or C++. The first chapter is a tutorial on the basic concepts of Go, introduced through programs for file I/O and text processing, simple graphics, and web clients and servers. Early chapters cover the structural elements of Go programs: syntax, control flow, data types, and the organization of a program into packages, files, and functions. The examples illustrate many packages from the standard library and show how to create new ones of your own. Later chapters explain the package mechanism in more detail, and how to build, test, and maintain projects using the go tool. The chapters on methods and interfaces introduce Go's unconventional approach to object-oriented programming, in which methods can be declared on any type and interfaces are implicitly satisfied. They explain the key principles of encapsulation, composition, and substitutability using realistic examples. Two chapters on concurrency present in-depth approaches to this increasingly important topic. The first, which covers the basic mechanisms of goroutines and channels, illustrates the style known as communicating sequential processes for which Go is renowned. The second covers more traditional aspects of concurrency with shared variables. These chapters provide a solid foundation for programmers encountering concurrency for the first time. The final two chapters explore lower-level features of Go. One covers the art of metaprogramming using reflection. The other shows how to use the unsafe package to step outside the type system for special situations, and how to use the cgo tool to create Go bindings for C libraries. The book features hundreds of interesting and practical examples of well-written Go code that cover the whole language, its most important packages, and a wide range of applications. Each chapter has exercises to test your understanding and explore extensions and alternatives. Source code is freely available for download

from <http://gopl.io/> and may be conveniently fetched, built, and installed using the go get command.

Transformational Grammar Of Modern Literary Arabic M.Z. Kebbe, 2013-01-11 First Published in 2000. This transformational analysis will greatly enrich the field of Arabic linguistics. While the majority of works on the Arabic language have concentrated on regional dialects, the present work fulfils a longfelt need by focusing on modern written or literary Arabic. Although literary Arabic is not used in casual conversation in any of the Arab countries, it is the formal and official form of the language and has great influence on the colloquial dialects, particularly those spoken by educated Arabs. Arranged in five chapters, the work gives particular emphasis to three major types of Arabic sentences the co-ordinate, the negative and the interrogative - and gives a generative account of them. The work is largely based on transformational theory as formulated by Chomsky, but reference is made to subsequent development in linguistic theory.

Translation between English and Arabic Noureldin Abdelaal, 2020-02-18 This textbook provides a comprehensive resource for translation students and educators embarking on the challenge of translating into and out of English and Arabic. Combining a solid basis in translation theory with examples drawn from real texts including the Qu'ran, the author introduces a number of the problems and practical considerations which arise during translation between English and Arabic, equipping readers with the skills to recognise and address these issues in their own work through practical exercises. Among these considerations are grammatical, semantic, lexical and cultural problems, collocations, idioms and fixed expressions. With its coverage of essential topics including culturally-bound terms and differences, both novice and more experienced translators will find this book useful in the development of their translation practice.

The Arabic Language in America Aleya Rouchdy, 1992 As in any other situation of languages in contact, Arabic spoken in the United States is changing under the influence of English. It has incorporated different linguistic innovations, and interference from English occurs on the various linguistic levels. However, in many cases this interference does not lead to language attrition, but rather to the creation of an ethnic language with special uses understood only by members of the Arab-American community. Developed out of Aleya Rouchdy's own involvement and teaching of Arabic in the United States, this book--the first of its kind--is devoted to the full range of Arabic in America. In

Part I contributors discuss borrowing and the changes occurring on the various linguistic levels of Arabic and the social factors that have contributed to these changes. Other chapters in Part I deal with code-switching between English and Arabic. Part II examines the shift toward English and the maintenance of Arabic as well as the attitudes that speakers display toward Arabic. Chapters in Part III are pedagogical in nature. The essays explore the history of the study of Arabic in the United States and examine methods and materials used in the teaching of Arabic, as well as some of the theoretical and practical implications associated with these different approaches. Primarily for readers with special interest in Arab immigration, settlement, and ethnicity, *The Arabic Language in America* will also engage the attention of sociologists, social historians, anthropologists, linguists, and sociolinguists, who will find the book relevant for their work.

Selected Studies in Modern Arabic Narrative Roger Allen, 2019-02-15 No Western scholar has contributed as much to the study of modern Arabic narrative as has Roger Allen. His doctoral dissertation was the very first Oxford D.Phil. in modern Arabic literature, completed in 1968 under the supervision of Mustafa Badawi. That same year, he took a position in Arabic language and literature at the University of Pennsylvania, the oldest professorial post in Arabic in the United States. Roger Allen has been phenomenally prolific: fifty books and translations, two hundred articles and counting - on Arabic language pedagogy, on translation, on Arabic literary history, criticism and literature. He is also one of the most decorated and acclaimed translators of Arabic literature. The present volume brings together sixteen of Roger Allen's articles on modern Arabic narrative, with a focus on genre, translation and literary history, and features analyses of the works of Rashid Abu Jadrah, Bensalem Himmich,
