Master Google Keep Can Akdeniz, We all want to be more productive. When you sense you have increased your productivity you feel like you do have control over your workflow and life, you are an accomplisher, you feel organized and being on the right track. If there's something that accompanies us all the time it's our smartphone or tablet. It's only naturally that, on one hand, we want to use them also to increase our productivity, and on the other hand, app developers want to exploit the potential of this constantly increasing segment of the market. Sometimes, when a really useful organizational app comes out, both parts can be winners here. This book is dedicated to one such relatively recent productivity app. Specifically, we'll be focusing on Google's entry into the productivity app market, its somewhat controversial Keep. Basically, Google Keep is designed to help you create, share, and collaborate notes in a quick and easy fashion. Being Google's offspring, the app offers seamless sync to Google; this means that you and people whom you choose to share with can access notes made in Keep from anywhere: on your Android phone, tablet, Android wearable, through a Chrome app, and, of course, on the web (though the web version

is poorer in options and features).

Beginning App Development with Flutter Rap Payne, 2019-12-04 Create iOS and Android apps with Flutter using just one codebase. App development on multiple platforms has historically been difficult and complex. This book breaks down complex concepts and tasks into easily digestible segments with examples, pictures, and hands-on labs with starters and solutions. In doing so, you'll develop a basic understanding of the Dart programming language; the entire Flutter development toolchain; the differences between stateful and stateless widgets; and a working knowledge of the architecture of apps. All the most important parts of app development with Flutter are covered in this book. Work with themes and styles. Develop custom widgets. Teach your app to respond to gestures like taps, swipes, and pinches. Design, create and control the layout of your app. Create tools to handle form data entry from users.
