**In the Plex** Steven Levy, 2021-02-02 "The most interesting book ever written about Google" (The Washington Post) delivers the inside story behind the most successful and

admired technology company of our time, now updated with a new Afterword. Google is arguably the most important company in the world today, with such pervasive influence that its name is a verb. The company founded by two Stanford graduate students—Larry Page and Sergey Brin—has become a tech giant known the world over. Since starting with its search engine, Google has moved into mobile phones, computer operating systems, power utilities, self-driving cars, all while remaining the most powerful company in the advertising business. Granted unprecedented access to the company, Levy disclosed that the key to Google's success in all these businesses lay in its engineering mindset and adoption of certain internet values such as speed, openness, experimentation, and risk-taking. Levy discloses details behind Google's relationship with China, including how Brin disagreed with his colleagues on the China strategy—and why its social networking initiative failed; the first time Google tried chasing a successful competitor. He examines Google's rocky relationship with government regulators, particularly in the EU, and how it has responded when employees left the company for smaller, nimbler start-ups. In the Plex is the “most authoritative...and in many ways the most entertaining” (James Gleick, The New York Book Review) account of Google to date and offers “an instructive primer on how the minds behind the world's most influential internet company function” (Richard Waters, The Wall Street Journal).

Literary Information in China Bruce Rusk, Anatoly Detwyler, Christopher Nugent, Xiao Liu, Jack W. Chen, 2021-05-11 “Information” has become a core concept across the disciplines, yet it is still often seen as a unique feature of the Western world that became central only in the digital age. In this book, leading experts turn to China's textual tradition

to show the significance of information for reconceptualizing the work of literary history, from its beginnings to the present moment. Contributors trace the organization of literary information across China's three millennia of history, examining the forms and practices of information management that have evolved alongside the increasing scale and complexity of textual production. They reimagine literary history as information processing, detailing the many kinds of storage, encoding, sorting, and transmission that constitute and feed back into China's long and ever-growing cultural tradition. The volume features state-of-the-field essays on all major forms of literary information management, from graphs to internet literature, and from commentaries to literary museums and archives. By shifting focus from individual works and their authors to the informatic schemata of literature, it identifies three scales of information management—the word, the document, and the collection—and surveys the forms that operate at each level, such as the dictionary, the anthology, and the library. *Literary Information in China* is a groundbreaking work that provides a systematic and innovative reassessment of literary history with implications that extend beyond the particular Chinese context, revealing how informatic practices shape literary tradition.

A New Method to Achieve Fluency in Reading and Writing Chinese. Wang Lingli, Keith Robinson, 2015-04-23 This book offers a completely new sequence for learning Chinese writing. If foreign students start learning to write Chinese by first inputting Radicals on the computer, they will make faster progress in being able to remember the vocabulary, and their transition to writing Chinese by hand will be more successful. At every stage in this carefully thought out sequence, the student should be encouraged to also practice what they have learnt on computer by writing the characters out by hand. The biggest problem

that students have with learning Mandarin Chinese is being able to write Chinese. It is a daunting task because of the sheer number of different characters involved and also because until now each character has been treated as a unique and separate entity. The time needed to commit all this vocabulary to memory and gain fluency and facility in writing Chinese is immense, but using this method it will make learning faster.
