Sousveillance, Media and Strategic Political Communication Vian Bakir,2010-05-27 Fusing perspectives from politics, media studies and cultural studies, Sousveillance, Media and Strategic Political Communication offers insights into impacts on strategic political communication of the emergence of web-based participatory media ('Web 2.0') across the first decade of the 21st century. Countering the control engendered in strategic political communication, Steve Mann's concepts of hierarchical sousveillance (politically motivated watching of the institutional watchers) and personal sousveillance (apolitical, human-centred life-sharing) is applied to Web 2.0. Focusing on interplays of user-generated and mainstream media about, and from, Iraq, detailed case studies explore different levels of control over strategic political communication during key moments, including the start of the 2003 Iraq war, the 2004 Abu Ghraib scandal, and Saddam Hussein's execution in 2006. These are contextualized by overviews of political and media environments from 2001-09. Dr Bakir outlines broader implications of sousveillant web-based participatory media for strategic political communication, exploring issues of agenda-building, control, and the cycle of emergence, resistance and reincorporation of Web 2.0. Sousveillance cultures are explored, delineating issues of anonymity, semi-permanence, instantaneity resistance and social change.

Cervin Matterhorn Yvan Hostettler,2006 Par sa forme pyramidale proche du monument, le Cervin constitue LA référence incontournable des publicitaires, illustrateurs et créateurs, qui se l'approprient lorsqu'il s'agit d'intégrer une montagne à leurs œuvres. Retouché, inversé par erreur, ou montré de façon subliminale, le sommet mythique se retrouve ainsi sur des affiches, des publicités, des sites web, ou encore sur de nombreux objets dont certains ne possèdent aucun lien avec la fameuse montagne... Cet ouvrage présente plus de 400 créations plus ou moins insolites qui usent et abusent du Cervin, véritable star parmi les montagnes !

The Tao of Network Security Monitoring Richard Bejtlich,2004-07-12 The book you are about to read will arm you with the knowledge you need to defend your network from attackers—both the obvious and the not so obvious.... If you are new to network security, don't put this book back on the shelf! This is a great book for beginners and I wish I had access to it many years ago. If you've learned the basics of TCP/IP protocols and run an open source or commercial IDS, you may be asking 'What's next?' If so, this book is for you. —Ron Gula, founder and CTO, Tenable Network Security, from the Foreword Richard Bejtlich has a good perspective on Internet security—one that is orderly and practical at the same time. He keeps readers grounded and addresses the fundamentals in an accessible way. —Marcus Ranum, TruSecure This book is not about security or network monitoring: It's about both, and in reality these are two aspects of the same problem. You can easily find people who are security experts or network monitors, but this book explains how to master both topics. —Luca Deri, ntop.org This book will enable security professionals of all skill sets to improve their understanding of what it takes to set up, maintain, and utilize a successful network intrusion detection strategy. —Kirby Kuehl, Cisco Systems Every network can be compromised. There are too many systems, offering too many services, running too many flawed applications. No amount of careful coding, patch management, or access control can keep out every attacker. If prevention eventually fails, how do you prepare for the intrusions that will eventually happen? Network security monitoring (NSM) equips security staff to deal with the inevitable consequences of too few resources and too many responsibilities. NSM collects the data needed to generate better assessment, detection, and response processes—resulting in decreased impact from unauthorized activities. In *The Tao of Network Security Monitoring*, Richard Bejtlich explores the products, people, and processes that implement the NSM model. By focusing on case studies and the application of open source tools, he helps you gain hands-on knowledge of how to better defend networks and how to mitigate damage from security incidents. Inside, you will find in-depth information on the following areas. The NSM operational framework and deployment considerations. How to use a variety of open-source tools—including Sguil, Argus, and Ethereal—to mine network traffic for full content, session, statistical, and alert data. Best practices for conducting emergency NSM in an incident response scenario, evaluating monitoring vendors, and deploying an NSM architecture. Developing and applying knowledge of weapons, tactics, telecommunications, system administration, scripting, and programming for NSM. The best tools for generating arbitrary packets, exploiting flaws, manipulating traffic, and conducting reconnaissance. Whether you are new to network intrusion detection and incident response, or a computer-security veteran, this book will enable you to quickly develop and apply the skills needed to detect, prevent, and respond to new and emerging threats.

This volume addresses this latter application of corpora by providing research insights firmly based in the classroom context and reporting on several state-of-the-art projects around the world where learners have direct access to corpus resources and tools and utilize them to improve their control of the language systems and skills or their professional expertise as translators. Its aim is to

present recent advances in data-driven learning, addressing issues involving different types of corpora, for different learner profiles, in different ways for different purposes, and using a variety of different research methodologies and perspectives.
