SUMMARY – The Four: The Hidden DNA Of Amazon, Apple, Facebook, And Google By Scott Galloway Shortcut Edition,2021-06-16 * Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. As you read this summary, you will learn about the hidden DNA of four of the world's largest companies: Amazon, Apple, Facebook and Google, known as the Four. You will also learn : that the Four had a combined market capitalization of \$2.3 trillion in 2017; that Facebook has 1.2 billion users; that Google has 2 billion users; that Amazon's market capitalization in 2017 was greater than the combined market capitalization of twelve of the world's largest retailers; that Google is one of the most profitable companies in the world; that the first two mobile applications in the United States belong to the Facebook group. The Four, that is, Amazon, Apple, Facebook and Google, are the companies on the planet that have the greatest influence on today's modernity. Everyone knows these companies, or at least believes they do. And everyone is wrong. Because their hidden DNA is very different from the nice, civic-minded and a bit mawkish, a bit boy-scout image that these firms go to great lengths to dismiss from them. As is often the case, their true identity is based on an insatiable quest for power and domination, first economic, then cultural and social. All the facts are brought to light by Scott Galloway in The Four. *Buy now the summary of this book for the modest price of a cup of coffee!

Google Web Toolkit Solutions (Digital Short Cut) David Geary,2007-01-18 This is the eBook version of the printed book. The Google Web Toolkit (GWT) is a cutting-edge UI framework for Java developers, which lets you create rich, interactive user interfaces using familiar idioms from Java's Abstract Window Toolkit (AWT), Swing, and the Eclipse Foundation's SWT. If you've used any of those frameworks in the past, you're already halfway up the GWT learning curve. This short cut assumes that you have already installed GWT and have experimented with its basic features. It also assumes that you're comfortable with techniques like implementing event listeners as anonymous inner classes and know how to construct applications using panels and widgets. Some of the more advanced aspects of the GWT are explored in this short cut using two applications: an address book and a Yahoo! trip viewer. Both applications use remote procedure calls to access information on the server or an online web service. The Yahoo! Trips application also shows how you can incorporate Scriptaculous, a powerful JavaScript toolkit, to apply a useful effect for displaying results. Other cool and useful techniques, including how to implement drag and drop and how to integrate with a database using Hibernate are demonstrated. Since you'll eventually want to move your GWT application to a servlet container such as Tomcat or Resin, the process of deploying a GWT application to Tomcat with Ant is also covered. Lastly, this short cut shows how to use popup panels and deferred commands to provide a much more interactive user interface. A JAR file containing the source code for both applications can be downloaded by going to www.prenhallprofessional.com/title/0131584650.
