Literacy Intervention in the Middle Grades Kevin Flanigan,Latisha Hayes,2022-11-16 No two students in grades 4–8 are identical, and many struggle with literacy for different reasons. Using a teacher-friendly, hands-on approach, this eminently practical book walks educators through the nuts and bolts of literacy intervention in the middle grades. Highlights include "North Star" principles to orient instruction, an assessment flowchart, and extended case studies of three middle-grades learners. The book offers evidence-based intervention practices for targeting specific literacy components, including word recognition, fluency, vocabulary, and comprehension. Teachers are guided to plan structured but flexible interventions that promote literacy growth and engagement. Sample lesson plans and clear, engaging figures illustrate how to make literacy intervention work for all students.

Go Systems Programming Mihalis Tsoukalos,2017-09-26 Learning the new system's programming language for all Unix-type systems About This Book Learn how to write system's level code in Golang, similar to Unix/Linux systems code Ramp up in Go quickly Deep dive into Goroutines and Go

concurrency to be able to take advantage of Go server-level constructs Who This Book Is For Intermediate Linux and general Unix programmers. Network programmers from beginners to advanced practitioners. C and C++ programmers interested in different approaches to concurrency and Linux systems programming. What You Will Learn Explore the Go language from the standpoint of a developer conversant with Unix, Linux, and so on Understand Goroutines, the lightweight threads used for systems and concurrent applications Learn how to translate Unix and Linux systems code in C to Golang code How to write fast and lightweight server code Dive into concurrency with Go Write low-level networking code In Detail Go is the new systems programming language for Linux and Unix systems. It is also the language in which some of the most prominent cloud-level systems have been written, such as Docker. Where C programmers used to rule, Go programmers are in demand to write highly optimized systems programming code. Created by some of the original designers of C and Unix, Go expands the systems programmers toolkit and adds a mature, clear programming language. Traditional system applications become easier to write since pointers are not relevant and garbage collection has taken away the most problematic area for low-level systems code: memory management. This book opens up the world of high-performance Unix system applications to the beginning Go programmer. It does not get stuck on single systems or even system types, but tries to expand the original teachings from Unix system level programming to all types of servers, the cloud, and the web. Style and approach This is the first book to introduce Linux and Unix systems programming in Go, a field for which Go has actually been developed in the first place.

Increased Empiricism Zhuo Jing-Schmidt,2013-12-15 Increased Empiricism: Recent advances in Chinese Linguistics showcases recent trends in the co-development of theory and empiricism in Chinese linguistics. The volume tackles a wide range of theoretical and empirical problems in multiple subfields including sociolinguistics, discourse analysis, lexical semantics, pragmatics, phonetics and phonology, corpus linguistics, and Chinese second language acquisition. The contributions do not fall neatly into two sections traditionally labeled "theoretical" and "empirical". Rather, theoretical discussions are buttressed by empirical evidence, and empirical analyses lead to theoretical generalizations. Furthermore, the volume transcends the functional-formal division, showing that empiricism not only empowers functional-typological and sociolinguistic research, but can also have a place in formally oriented linguistic analysis.
