Dispatches from the AIDS Pandemic Kevin M. De Cock, Harold W. Jaffe, James W. Curran, 2003 The United States Centers for Disease Control and Prevention (CDC) is the nation's leading public health agency. Among its responsibilities, the agency works with public health partners to investigate unexplained illnesses and help prevent future cases. For example, CDC investigators identified the cause of a severe respiratory illness among attendees at an American Legion convention in Philadelphia in 1976 (Legionnaires' Disease) and linked the newly recognized toxic-shock syndrome with the use of super-absorbent tampons by American women a few years later (,). And, when reports of rare and severe diseases in previously healthy young homosexual men in the United States began appearing in the early

1980s, CDC launched investigations into what would become known as acquired immunodeficiency syndrome (AIDS)--

Air Traffic Control: Human Performance Factors Anne R.

Isaac, Bert Ruitenbergh, 2017-03-02 From the Foreword by Captain Daniel Maurino, ICAO: '...Air Traffic Control...will remain a technology-intensive system. People (controllers) must harmoniously interact with technology to contribute to achieve the aviation system's goals of safe and efficient transportation of passengers and cargo...This book...considers human error and human factors from a contemporary and operational perspective and discusses the parts as well as the whole...I hope you enjoy reading it as much as I did.' The motivation for writing this book comes from the author's long standing belief that the needs of Air Traffic Service personnel are inadequately represented in the aviation literature. There are few references to air traffic control in many of the books written for pilots and about pilots and this is also observed at the main international conferences. In line with the ICAO syllabus for human factors training for air traffic controllers, the book covers the main issues in air traffic control, with regard to human performance: physiology including stress, fatigue and shift work problems; psychology with emphasis on human error and its management, social psychology including issues of communication and working in teams, the environment including ergonomic principles and working with new technologies and hardware and software issues including the development of documentation and procedures and a study of the changes brought about by advanced technologies. Throughout the text there are actual examples taken from the air traffic control environment to illustrate the issues discussed. A full bibliography is included for those who want to read beyond these issues. It has been written for all in air

traffic services, from ab initio to the boardroom; it is important that the men and women in senior management positions have some knowledge and awareness of the fundamental problems that limit and enhance human performance.

The Future Air Navigation System (FANS) Vincent P. Galotti,2019-05-23 In view of the increase in air traffic, there has been

a great deal of work by the nations of the world, under the auspices of ICAO, toward developing the concept for a future air navigation infrastructure to serve worldwide civil aviation efficiency. Even though the concept is well described and implementation is beginning, only technical manuals are available to advance the systems concept. This book describes the global vision for the Future Air Navigation System (FANS) and is the first text of its kind dedicated solely to Communications Navigation, Surveillance/Air Traffic Management and the CNS/ATM systems concept. In addition to the technical issues associated with CNS/ATM, the book also examines institutional, economic, labour and Human Factors issues. It is designed as a text usable in the classroom environment in universities and aviation technical schools.
