Coastal Disasters and Climate Change in Vietnam Nguyen Danh Thao, Hiroshi Takagi, Miguel Esteban, 2014-06-04 Coastal Disasters and Climate Change in Vietnam is the first book to focus specifically on natural hazards and climate change in Vietnam. The book examines threats such as tropical cyclones, sea-level rise, flooding, erosion, and salinity intrusion, and their respective effects on coastal structures and environments. It also looks at crucial management and mitigation efforts, including breakwater design, irrigation systems, coastal dunes and dikes, and more. The challenges faced by this country in the future will have important regional and global repercussions; areas such as the Mekong Delta produce a significant proportion of the world's rice, and coastal impacts on this region will have far-reaching economic and public health effects. This book is an important source of information for government and local policy makers, environmental and climate scientists, and engineers. Broad coverage of climate challenges specific to the region, including sea-level rise, storms, erosion, and more Assessments of impact on, and effects of, economic development and port construction Examination of public policy responses to climate change

**Deep Learning and Other Soft Computing Techniques** Nguyen Hoang Phuong, Vladik Kreinovich, 2023-06-26 This book focuses on the use of artificial intelligence (AI) and computational intelligence (CI) in medical and related applications. Applications include all aspects of medicine: from diagnostics (including analysis of medical images and medical data) to therapeutics (including drug design and radiotherapy) to epidemic- and pandemic-related public health policies. Corresponding techniques include machine learning (especially deep learning), techniques for processing expert knowledge (e.g., fuzzy techniques), and advanced techniques of applied mathematics (such as innovative probabilistic and graph-based techniques). The book also shows that these techniques can be used in many other applications areas, such as finance, transportation, physics. This book helps practitioners and researchers to learn more about AI and CI methods and their biomedical (and related) applications—and to further develop this important research direction.

*Socio-political and Cultural Determinants of Diarrheal Disease in the Mekong Delta* Panagiota Kotsila, 2014 This dissertation examines the cultural, social, environmental, and political factors that shape the spread of diarrhea in Vietnam's Mekong Delta. The case of the Mekong Delta shows why the spread of disease is not merely an epidemiological problem, but an institutional one as well. Social inequalities, the dominance of central-state led discourse, and the lack of participatory health education all contribute to a persistently high incidence of disease. This research calls for a re-politicization and contextualization of public health problems in order to better understand why they occur and therefore be better able to prevent them. Dissertation. (Series: ZEF Development Studies – Vol. 28) [Subject: Asian Studies, Vietnamese Studies, Epidemiology, Public Health]

Tracing and Making the State Nadine Reis, 2012 Lack of access to clean water is an urgent problem in developing countries, including Vietnam. This book investigates the 'everyday politics' of domestic water supply and sanitation in the rural Mekong Delta. It offers new theoretical perspectives on policy-making in Vietnam, as well as the cultural aspects of globalization. The book shows that policy practices have to be understood as mechanisms for the (re-)production of a political order, manifest in the cultural and social properties of the Vietnamese state. It provides a critical perspective on donor support to Vietnamese water policy and practice. (Series: ZEF Development Studies – Vol. 20)

**River Flow 2020** Wim Uijtewaald,Mário J. Franca,Daniel Valero,Victor Chavarrias,Clàudia Ylla Arbós,Ralph Schielen,Alessandra Crosato,2020-08-27 Rivers form one of the lifelines in our society by providing essential services such as availability of fresh water, navigation, energy, ecosystem services, and flood conveyance.

Because of this essential role, mankind has interfered continuously in order to benefit most and at the same time avoid adverse consequences such as flood risk and droughts. This has resulted in often highly engineered rivers with a narrow set of functions. In the last decades rivers are increasingly considered in a more holistic manner as a system with a multitude of interdependent processes. River research and engineering has therefore added to the river fundamentals also themes like ecohydraulics, consequences of climate change, and urbanisation. River Flow 2020 contains the contributions presented at the 10th conference on Fluvial Hydraulics, River Flow 2020, organised under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro-Environment Engineering and Research (IAHR). What should have been a lively physical gathering of researchers, students and practitioners, was converted into an online event as the COVID-19 pandemic hindered international travelling and large gatherings of people. Nevertheless, the fluvial hydraulics community showed their interest and to be very much alive with a high number of participations for such event. Since its first edition in 2002, in Louvain-la-Neuve, this series of conferences has found a large and loyal audience in the river research and engineering community while being also attractive to the new researchers and young professionals. This is highlighted by the large number of contributions applying for the Coleman award for young researchers, and also by the number of applications and attendants to the Master Classes which are aimed at young researchers and students. River Flow 2020 aims to provide an updated overview of the ongoing research in this wide range of topics, and contains five major themes which are focus of research in the fluvial environment: river fundamentals, the digital river, the healthy river, extreme events and rivers under pressure. Other highlights of River Flow 2020 include the substantial number of interdisciplinary subthemes and sessions of special interest. The contributions will therefore be of interest to academics in hydraulics, hydrology and environmental engineering as well as practitioners that would like to be updated about the newest findings and hot themes in river research and engineering.
