Including papers from the Tenth International Conference on Computer System Design and Operation in the Railway and Other Transit Systems, the book will be of interest to railway management, consultants, railway engineers (including signal and control engineers), designers of advanced train control systems and computer specialists. Themes of interest include: Planning; Human Factors; Computer Techniques, Management and languages; Decision Support Systems; Systems Engineering; Electromagnetic Compatibility and Lightning; Reliability, Availability, Maintainability and Safety (RAMS); Freight; Advanced Train Control; Train Location; CCTV/Communications; Operations Quality; Timetables; Traffic Control; Global Navigation using Satellite Systems; Online Scheduling and Dispatching; Dynamics and Wheel/Rail Interface; Power Supply; Traction and Maglev; Obstacle Detection and Collision Analysis; Railway Security.

Assistive Technology on the Threshold of the New Millennium Christian Bühler,Harry Knops,1999 The field of assistive technology is influenced by the ongoing and rapid development of mainstream technologies on the one hand and continuing changes to social systems in relation to societal events – such as the ageing of the population – on the other. The articles in this book provide a broad overview of developments in technical support for people with functional restrictions: key technologies like telecommunications and IT are addressed, while low-tech practical solutions are also considered.

AXTracker, an Inexpensive Satellite Transmitter for Sensing Changes at Remote Locations Gary Kees,2005 The AXTracker is a battery-operated, self-contained telemetry device designed to communicate via the Globalstar satellite network and capable of providing asset tracking and fleet management in remote regions.

How Information Systems Can Help in Alarm/Alert Detection Florence Sedes,2018-11-12 Alarm or alert detection remains an issue in various areas from nature, i.e. flooding, animals or earthquake, to software systems. Liveness, dynamicity, reactivity of alarm systems: how to ensure the warning information reach the right destination at the right moment and in the right location, still being relevant for the recipient, in spite of the various and successive filters of confidentiality, privacy, firewall policies, etc.? Also relevant in this context are to technical contingency issues: material failure, defect of connection, break of channels, independence of information routes and sources? Alarms with crowd media, (mis)information vs. rumours: how to make the distinction? The prediction of natural disasters (floods, avalanches, etc.), health surveillance (affectionate fevers of cattle, pollution by pesticides, etc.), air, sea and land transport, or space surveillance to prevent Risks of collisions between orbital objects involve more and more actors within Information Systems, one of whose purposes is the dissemination of alerts. By expanding the capabilities and functionality of such national or international systems, social networks are playing a growing role in dissemination and sharing, eg. with the support of systems like the Google Alert (https://www.google.fr/alerts) which concerns the publication of contents online. Recently, the Twitter microblogging platform announced a broadcast service, designed to help government organizations with alerts to the public. The proper functioning of such systems depends on fundamental properties such as resilience, liveliness and responsiveness: any alert must absolutely reach the right recipient at the right time and in the right place, while remaining relevant to him, despite the various constraints. on the one hand to external events, such as hardware failures, connection faults, breaks in communication channels, on the other hand to confidentiality, such as the collection and use of personal data (with or without the consent of the user), or the disparity of access policies (generation according to industrial, technological, security constraints, management of internal / external policies, etc.) between actors. This book opens the discussion on the procrastination, the dynamics and the reactivity of the alert systems, but also the problems of confidentiality, filtering of information, and the means of distinguishing information and rumor. Presents alarm or alert detection in all its aspects Finds a solution so that the alert information reaches the right destination Find relevance to various technical issues

Rethinking Perception and Centering the Voices of Unique Individuals: Reframing Autism Inclusion in Praxis Nerren, Jessica Block,2022-06-30 Ensuring classrooms are inclusive to all students, particularly those with disabilities such as autism spectrum disorder, is crucial in today's educational landscape. It is vital that educators are prepared and knowledgeable on the current best practices and policies in order to provide these students with the most thorough education possible. Rethinking Perception and Centering the Voices of Unique Individuals: Reframing Autism Inclusion in Praxis introduces a new model of reframing autism spectrum disorder inclusion for professors of preliminary teacher candidates and provides meaningful understanding and support for professors who prepare preliminary teacher candidates. Covering key topics such as equity, mental disorders, inclusive education, and educational reform, this reference work is ideal for administrators, stakeholders, policymakers, teacher educators, counselors, researchers, academicians, scholars, practitioners, instructors, and students.

Saving America "More Than One Long Day" Governmental and Corporation Deception = Patent Thievery Daniel B Hock,2012-09-20 Our DEDICATION TO PROTECT has risen from my past rescues as a professional firefighter. My wife and I have innovated, prototyped, and patented, an alert system to allow safety concerns for our public and military. Many lives have been lost, and continue. With our patented innovation, our Country has regained recourse, by means of deception. Military operations, I truly believe, have led to the dispatching of many terrorists, and continue to improve with more actions. Our dedication has turned our device into an International success. Many companies, that were trusted interests, decided to eliminate our DESTINY, to call their own. As more insightful innovations evolve, more volumes, to this book, will be created. With the fabulous return of our troops from overseas, the locating and destructing of the Taliban, I salute. If this meant the thieving of our patent, to achieve greatness, than I am grateful. Otherwise, stop the deceiving corporations and government . Our Country's children need our device today. I continue to be inundated with the screams of terror from abductions, torture, and death. OUR COUNTRY NEEDS THIS PROTECTION....not tens of thousands of unmanned drone planes following our cell phones.. If our new cell phones are implemented with an Auto-Id, GPS Auto-Tracker microprocessor, I WANT TO KNOW. (I believe, I already know) GOVERNMENT FOR THE PEOPLE AND BY THE PEOPLE...when did this stop?

Using Technology in Dementia Care Arlene Astell,Sarah Smith,Philip Joddrell,2019-06-21 Many new pieces of technology can be beneficial to individuals living with dementia, including both hardware and software. This straightforward guide summarises the current research on this growing topic, and gives practical advice on how available technology can be used to improve the everyday lives of people with dementia. Looking at a range of available products, such as off-the-shelf computers and smartphones, to dementia specific applications and programs, it also addresses some common obstacles and barriers faced when introducing technology in dementia care. The past twenty years have seen an array of technologies developed to improve the day-to-day lives of people with dementia; this guide shows how they can be effectively used.

Industrial Process Automation Systems B.R. Mehta,Y. Jaganmohan Reddy,2014-11-26 Industrial Process Automation Systems: Design and Implementation is a clear guide to the practicalities of modern industrial automation systems. Bridging the gap between theory and technician-level coverage, it offers a pragmatic approach to the subject based on industrial experience, taking in the latest technologies and professional practices. Its comprehensive coverage of concepts and applications provides engineers with the knowledge they need before referring to vendor documentation, while clear guidelines for implementing process control options and worked examples of deployments translate theory into practice with ease. This book is an ideal introduction to the subject for junior level professionals as well as being an essential reference for more experienced practitioners. Provides knowledge of the different systems available and their applications, enabling engineers to design automation solutions to solve real industry problems. Includes case studies and practical information on key items that need to be considered when procuring automation systems. Written by an experienced practitioner from a leading technology company

Big Data Analysis and Deep Learning Applications Thi Thi Zin,Jerry Chun-Wei Lin,2018-06-06 This book presents a compilation of selected papers from the first International Conference on Big Data Analysis and Deep Learning Applications (ICBDL 2018), and focuses on novel techniques in the fields of big data analysis, machine learning, system monitoring, image processing, conventional neural networks, communication, industrial information, and their applications. Readers will find insights to help them realize more efficient algorithms and systems used in real-life applications and contexts, making the book an essential reference guide for academic researchers, professionals, software engineers in the industry, and regulators of aviation authorities.
