Advances in Human Aspects of Transportation Neville A. Stanton, Steven Landry, Giuseppe Di Bucchianico, Andrea Vallicelli, 2016-07-26 This book discusses the latest advances in research and development, design, operation and analysis of transportation systems and their complementary infrastructures. It reports on both theories and case studies on road and rail, aviation and maritime transportation. The book covers a wealth of topics, from accident analysis, vehicle intelligent control, and human-error and safety issues to next-generation transportation systems, model-based design methods, simulation and training techniques, and many more. A special emphasis is given to smart technologies and automation in transport, as well as to user-centered, ergonomic and sustainable design of transport systems. The book, which is based on the AHFE 2016 International Conference on Human Factors in Transportation, held on July 27-31, 2016, in Walt Disney World®, Florida, USA, mainly addresses transportation system designers, industrial designers, human-computer interaction researchers, civil and control engineers, as well as vehicle system engineers. Moreover, it represents a timely source of information for transportation policy-makers and social scientists dealing with traffic safety, management, and sustainability issues in transport.

Satellite Communications Nazzareno Diodato,2010-09-18 This study is motivated by the need to give the reader a broad view of the developments, key concepts, and technologies related to information society

evolution, with a focus on the wireless communications and geoinformation technologies and their role in the environment. Giving perspective, it aims at assisting people active in the industry, the public sector, and Earth science fields as well, by providing a base for their continued work and thinking.

The Mobile Photographer ,2014-11-17 It's been said that, with smartphones, everyone is a photographer. There is a snide implication with that statement—that camera phones aren't "real" cameras and that the people who use them aren't "real" photographers. In this book, Robert Fisher proves that today's Android devices offer cameras that are remarkably powerful and more than capable of producing images that rival those made with more "serious" equipment. In this book, Fisher guides readers through the menus of the Android operating system, helping them to understand how to choose and use out-of-the-box controls for better images. Next, he covers add-on accessories and applications designed to enhance the devices' capabilities. While the photographic capabilities of the "base" camera are pretty terrific and will meet with rave reviews from many users, the camera really produces images that sing when suited up with DSLR functions, filters, and postproduction effects—all of which Fisher covers with prowess and technical skill.

Arduino IV: DIY Robots Tyler Kerr, Steven Barrett, 2022-09-13 This book gives a step-by-step introduction to designing and building your own robots. As with other books in the Arduino series, the book begins with a quick overview of the Arduino Integrated Development Environment (IDE) used to write sketches, and the hardware systems aboard the Arduino UNO R3 and the Mega 2560 Rev 3. The level of the text makes it accessible for students, hobbyist and professionals' first introduction to both

Arduino and Robotics. This book will be accessible by all levels of students, advanced hobbyists and engineering professionals, whether using as a self-reference or within a structure design laboratory. The text then examines the many concepts and characteristics common to all robots. In addition, throughout the book, reasonably priced, easily accessible and available off-the-shelf robots are examined. Examples include wheeled robots, tracked robots and also a robotic arm. After a thorough and easy to follow Arduino IDE and hardware introduction, the book launches into "do it yourself" or DIY concepts. A unique feature of the book is to start with a hands-on introduction to low cost 3D printing. These concepts will allow you to design and print your own custom robot parts and chassis. We then explore concepts to sense a robot's environment, move the robot about and provide a portable power source. We conclude with a several DIY robot projects.

Kala Azar in South Asia E. Noiri, T.K. Jha, 2017-01-11 Visceral leishmaniasis (VL), (also known as black fever or Kala-azar) is a life-threatening disease first reported from the Indian subcontinent. VL ranks as the world's second largest parasitic disease killer and is a neglected tropical disease. Most of those infected by this life-threatening disease are uneducated daily wagers working to support their families, and vectors easily disseminate the disease to their neighbors. Owing to recent involvement of stakeholders, the number of patients is decreasing, but eradication remains a distant goal. This second edition presents latest reports of visceral Leishmaniasis by specialists working at the forefront of the endemic areas in Indian subcontinent. It also introduces vaccine development and inhibitors to Trypanosomatidae; some of them describing feasibility studies in visceral Leishmaniasis for the first time. Recent progress of the Science and

Technology Research Partnership for Sustainable Development (SATREPS) is also reviewed and the contents share this collaborative research from the forefront of endemic sites in Bangladesh. Widely covering basic, clinical, epidemiological and entomological aspects, this volume will be of great interest to dedicated researchers interested in Leishmaniasis and to experts of NTDs in global health. There is a tide in the affairs of men. Which, taken at the flood, leads on to fortune; Omitted, all the voyage of disease control is bound in shallows and in miseries. ~modified from Shakespeare ~

Trustworthy Global Computing Gilles Barthe, Cédric Fournet, 2008-03-18 This book constitutes the thoroughly refereed post-conference proceedings of the Third Symposium on Trustworthy Global Computing, TGC 2007; it moreover contains tutorials from the adjacent Workshop on the Interplay of Programming Languages and Cryptography, both held in Sophia-Antipolis, France, in November 2007. The 19 revised papers presented together with 3 invited papers were carefully selected from 48 submissions during two rounds of reviewing and improvement. The TGC 2007 symposium papers focus on providing tools and frameworks for constructing well-behaved applications and for reasoning about their behavior and properties in models of computation that incorporate code and data mobility over distributed networks with highly dynamic topologies and heterogeneous devices. The volume concludes with 3 tutorial papers, presented at the co-located Workshop on the Interplay of Programming Languages and Cryptography.

<u>Canon EOS 6D Digital Field Guide</u> Michael Corsentino,2013-05-23 The Canon EOS 6D is Canon's smallest and lightest full-frame DSLR camera to date and boasts an extensive feature set. This full-color,

Operational Oceanography N.C. Flemming, S. Vallerga, N. Pinardi, H.W.A. Behrens, G. Manzella, D. Prandle, J.H. Stel, 2002-06-05 The Global Ocean Observing System (GOOS) is an international programme for a permanent global framework of observations, modelling and analysis of ocean variables that are needed to support operational services around the world. The EuroGOOS strategy has two streams: the first is to improve the quality of marine information in European home waters, and the second is to collaborate with similar organisations in other continents to create a new global ocean observing and modelling system that will provide the open ocean forecasts needed to achieve the best possible performance by local marine information services everywhere. EuroGOOS held its second international conference in The Hague in

1999. Here, the operational services already in place in the EuroGOOS regions were presented and evaluated. In addition, a Forward Look was presented, with targets for the next 5-10 years. The proceedings of the first EuroGOOS conference were published by Elsevier in the /locate/inca/600827EOS Series No. 62 Editors: Stel et al, ISBN 0-444-82892-3.

The Power of Place in Play Christina R. Ergler,2020-03-31 »There's nothing really fun about the park in winter!« - Christina Ergler is the first one to explore why play resonates differently across urban localities and seasons. She draws on Bourdieu's theory of practice and Gibson's affordance theory to show that determinants of seasonal outdoor play transcend modifiable barriers such as traffic and unsuitable play spaces as well as the inevitable issue of inclement weather. In contrast, seasonal play determinants are grounded in locally constituted beliefs about what is seasonally appropriated children's activity. To foster a healthier and more sustainable life for children, outdoor play needs to become convenient all-year-round in all locations.

Big Data in Computational Social Science and Humanities Shu-Heng Chen,2018-11-21 This edited volume focuses on big data implications for computational social science and humanities from management to usage. The first part of the book covers geographic data, text corpus data, and social media data, and exemplifies their concrete applications in a wide range of fields including anthropology, economics, finance, geography, history, linguistics, political science, psychology, public health, and mass communications. The second part of the book provides a panoramic view of the development of big data in the fields of computational social sciences and humanities. The following questions are addressed: why is there a need

for novel data governance for this new type of data?, why is big data important for social scientists?, and how will it revolutionize the way social scientists conduct research? With the advent of the information age and technologies such as Web 2.0, ubiquitous computing, wearable devices, and the Internet of Things, digital society has fundamentally changed what we now know as data, the very use of this data, and what we now call knowledge. Big data has become the standard in social sciences, and has made these sciences more computational. Big Data in Computational Social Science and Humanities will appeal to graduate students and researchers working in the many subfields of the social sciences and humanities.

Geoinformatics for Intelligent Transportation Igor Ivan,Itzhak Benenson,Bin Jiang,Jiří Horák,James Haworth,Tomáš Inspektor,2014-11-29 The aim of the book is to present and discuss new methods, issues and challenges involved in geoinformatics' contribution to making transportation more intelligent, efficient and human-friendly. It covers a wide range of topics related to transportation and geoinformatics. The themes are divided into four main sections: Transport modeling, Sensor data and services, Intelligent transport systems, and Transport planning and accessibility.

The Biology and Conservation of Australasian Bats Bradley Law, Peggy Eby, Lindy Lumsden, Daniel Lunney, 2011 This book, the Biology and Conservation of Australasian Bats, follows from the successful 3-day forum of the same name held in April 2007 at the Australian Museum. The forum was organised jointly by the Royal Zoological Society of NSW and the Australasian Bat Society.

Handbook of Position Location Reza Zekavat,R. Michael Buehrer,2019-03-06 A comprehensive review of position location technology — from fundamental theory to advanced practical applications Positioning systems and location technologies have become significant components of modern life, used in a multitude of areas such as law enforcement and security, road safety and navigation, personnel and object tracking, and many more. Position location systems have greatly reduced societal vulnerabilities and enhanced the

quality of life for billions of people around the globe — yet limited resources are available to researchers and students in this important field. The Handbook of Position Location: Theory, Practice, and Advances fills this gap, providing a comprehensive overview of both fundamental and cutting-edge techniques and introducing practical methods of advanced localization and positioning. Now in its second edition, this handbook offers broad and in-depth coverage of essential topics including Time of Arrival (TOA) and Direction of Arrival (DOA) based positioning, Received Signal Strength (RSS) based positioning, network localization, and others. Topics such as GPS, autonomous vehicle applications, and visible light localization are examined, while major revisions to chapters such as body area network positioning and digital signal processing for GNSS receivers reflect current and emerging advances in the field. This new edition: Presents new and revised chapters on topics including localization error evaluation, Kalman filtering, positioning in inhomogeneous media, and Global Positioning (GPS) in harsh environments Offers MATLAB examples to demonstrate fundamental algorithms for positioning and provides online access to all MATLAB code Allows practicing engineers and graduate students to keep pace with contemporary research and new technologies Contains numerous application-based examples including the application of localization to drone navigation, capsule endoscopy localization, and satellite navigation and localization Reviews unique applications of position location systems, including GNSS and RFID-based localization systems The Handbook of Position Location: Theory, Practice, and Advances is valuable resource for practicing engineers and researchers seeking to keep pace with current developments in the field, graduate students in need of clear and accurate course material, and university instructors teaching the fundamentals of wireless

localization.
