Charting the World Richard Panchyk,2011-08-01 As soon as early humans began to scratch images on cave walls, they began to create maps. And while these first drawings were used to find hunting grounds or avoid danger, they later developed into far more complex navigational tools. Charting the World tells the fascinating history of maps and mapmaking, navigators and explorers, and the ways that technology has enhanced our ability to understand the world around us. Richly illustrated with full-color maps and diagrams, it gives

children an in-depth appreciation of geographical concepts and principles and shows them how to unlock the wealth of information maps contain. It also features 21 hands-on activities for readers to put their new skills to the test. Children will: build a three-dimensional island model using a contour map, engrave a simple map on an aluminum "printing plate," determine the elevation of hills in their neighborhood, draw a treasure map and have a friend search for the hidden stash, create a nautical chart of a small puddle, survey their backyard or local park, navigate a course using a compass, and much more. Now more than ever, the study of geography is crucial to understanding our ever-changing planet, from political change and warfare to environmental conservation and population growth.

GPS and Google Earth for Development: How to Create, Share and Collaborate with Maps on the Net Santiago Arnalich, Julio Urruela, 2012-09 This book shows you how to use a GPS and Google Earth to create simple and expressive maps to share on the web like the one shown on the cover. With a reading time of a mere 10 hours you will learn to work with a GPS without making mistakes, to use it with Google Earth including in areas without internet access and to quickly create diverse interactive maps that other people can see and modify over the internet without the need for experts or unnecessary complications. Even though it has been written in the context of Relief and Development work, the same process is valid for whatever other application.

Essential Wilderness Navigation Craig Caudill, Tracy Trimble, 2019-04-09 All the Skills You Need to Navigate Unfamiliar Terrain In this must-have guide, top wilderness trainer and author Craig Caudill partners with fellow wilderness instructor Tracy Trimble to help you find your way in nature—no matter the tools you have on hand. Using real-life stories of wilderness navigation successes—and cautionary tales of wilderness exploration gone awry—Craig and Tracy start with the basics of rudimentary compass and map use

before teaching the finer points of these indispensable resources, making Essential Wilderness Navigation the ultimate go-to guide for explorers of all skill levels. You'll also learn how technological aids like GPS and natural elements like flora, fauna and celestial bodies can help you identify your position. Armed with your new knowledge and skills, you will be well equipped to troubleshoot any problems, explore nature and become a master wilderness navigator.

GPS for Walkers Clive Thomas, 2006 The new edition of this easy-to-use guide, updated by the experienced walker and outdoor navigation expert Clive Thomas, uses non-technical language to introduce you to choosing and using a GPS receiver to enhance leisure walking and to participate in geocaching. This fully updated edition uses the new Garmin eTrex 10 model to explain the basic principles and step-by-step functionality of using GPS or walking and geocaching. It includes everything you need to know, with expert tips, reliable advice, valuable information and practical guidance. The guide includes: how a GPS functions; how to navigate using a GPS; its practical uses when walking; and an extended chapter on how to geocache with your GPS. This is the perfect introduction to GPS, digital maps and geocaching.

Programming GPS and OpenStreetMap Applications with Java Kristof Beiglböck, 2012-01-27 Written by an expert in the development of GPS systems with digital maps and navigation, Programming GPS and OpenStreetMap Applications with Java: The RealObject Application Framework provides a

concrete paradigm for object-oriented modeling and programming. It presents a thorough introduction to the use of available global positioning data for the development of applications involving digital maps. The author first describes the different formats of GPS data and digital maps and shows how to use recorded GPS traces to replay and display this data on a digital map. Then, he works through in detail the processing steps of obtaining dedicated data from OpenStreetMaps and how to extract a network for a simple navigation application. For each topic covered—GPS data, OpenStreetMaps, and navigation—Java code is developed that can easily be adapted to the readers' needs and locality. Finally, all components are put together in a sample computer-game application modeled on the well-known board game, Scotland Yard. The computer game is intended to be a basis from which readers can develop and customize their own application for their desired geographical area. The developed application can be published on the Internet and made available for interactive multiplayer competition. This book provides a fun and interesting way to learn distributed programming with Java and real-world data. Open-source software is available on a companion website at www.roaf.de
