Interactive Road Information System of a Modern City Kamal Kumar Tanti,2015-05-05 The current study conveys the suitability and applications of GIS and GPS technology in the development of an interactive Road Information System (RIS) for a modern city. This RIS can help the planners and administrators to identify the problems associated with rural road development activities, location and provision of appropriate facilities, monitoring and maintenance management of the assets created in the rural areas. This RIS provides an interactive information database that consists of a range of available utility services within the selected road network. This interactive system provides the end-users a list of query-based services. These query-based services include the road connectivity between any two selected points, informations about distances and accessibility, buffering-based information bank and related proximity analysis etc. It will also provide necessary details about different network analysis-based route information (e.g., alternate route, shortest possible route, finding closest facility etc.) in any selected area during various emergency situations.

English for Environmental Science in Higher Education Studies Richard Lee,2009 English for Environmental Science in Higher Education Studies The Garnet Education English for Specific Academic Purposes series won the Duke of Edinburgh English Speaking Union English Language Book Award in 2009. English for Environmental Science is a skills-based course designed specifically

for students of environmental science who are about to enter English-medium tertiary level studies. It provides carefully graded practice and progressions in the key academic skills that all students need, such as listening to lectures and speaking in seminars. It also equips students with the specialist language they need to participate successfully within an environmental science department. Extensive listening exercises come from environmental science lectures, and all reading texts are taken from the same field of study. There is also a focus throughout on the key environmental science vocabulary that students will need. Listening: how to understand and take effective notes on extended lectures, including how to follow the argument and identify the speaker's point of view. Speaking: how to participate effectively in a variety of realistic situations, from seminars to presentations, including how to develop an argument and use stance markers. Reading: how to understand a wide range of texts, from academic textbooks to Internet articles, including how to analyze complex sentences and identify such things as the writer's stance. Writing: how to produce coherent and well-structured assignments, including such skills as paraphrasing and the use of the appropriate academic phrases. Vocabulary: a wide range of activities to develop students' knowledge and use of key vocabulary, both in the field of environmental science and of academic study in general. Vocabulary and Skills banks: a reference source to provide students with revision of the key words and phrases and skills presented in each unit. Full transcripts of all listening exercises. The Garnet English for Specific Academic Purposes series covers a range of academic subjects. All titles present the same skills and vocabulary points. EIB Investment Report 2020/2021 European Investment Bank, 2021-02-04 The European Union's massive efforts to rebuild after the coronavirus pandemic present a unique opportunity to transform its economy, making it more green and digital – and ultimately more competitive. The Investment Report 2020-2021 looks at the toll the pandemic took on European firms' investment and future plans, as well as their efforts to meet the demands of climate change and the digital revolution. The report's analysis is based on a unique set of databases and data from a survey of 12 500 firms conducted in the summer of 2020, in the midst of the COVID-19 crisis. While providing a snapshot of the heavy toll the pandemic took on some forms of investment, the report also offers hope by pointing out the economic areas in which Europe remains strong, such as technologies that combine green and digital innovation.

The Illusion Of Presidential Government Hugh Heclo, Lester M Salamon, 2019-07-11 Presidential government is an illusion. It is an image that misleads presidents no less than the media and the American public. Thus begins this realistic look at the presidency, in which nine leading presidential scholars examine how and why we are under the illusion of presidential government and ask such questions as: What is the president's actual role? What has happened to his traditional tools of executive leadership? How is the office of the president organized to deal with domestic, economic, and national security affairs? Is federal regulation an area of potential power for the president? And, if presidential government is indeed a myth, what can be done to help the presidency play a more effective part in constitutional government? Each chapter probes a different facet of the image of presidential government by looking at the major operations of the modern presidency—from struggles with Congress for control of administrative detail to problems of managing the economy and national security. The book closes with the final report of the National Academy of Public Administration's Panel on Presidential Management. Not surprisingly, the authors do not always agree; nevertheless, they are united in the view that the managerial role of the president must be seen as a whole—and without illusions.

Springer Handbook of Global Navigation Satellite Systems Peter Teunissen, Oliver Montenbruck, 2017-06-16 This Handbook presents a complete and rigorous overview of the fundamentals, methods and applications of the multidisciplinary field of Global Navigation Satellite Systems (GNSS), providing an exhaustive, one-stop reference work and a state-of-the-art description of GNSS as a key technology for science and society at large. All global and regional satellite navigation systems, both those currently in operation and those under development (GPS, GLONASS, Galileo, BeiDou, QZSS, IRNSS/NAVIC, SBAS), are examined in detail. The functional principles of receivers and antennas, as well as the advanced algorithms and models for GNSS parameter estimation, are rigorously discussed. The book covers the broad and diverse range of land, marine, air and space applications, from everyday GNSS to high-precision scientific applications and provides detailed descriptions of the most widely used GNSS format standards, covering receiver formats as well as IGS product and meta-data formats. The full coverage of the field of GNSS is presented in seven parts, from its fundamentals, through the treatment of global and regional navigation satellite systems, of receivers and antennas, and of algorithms and models, up to the broad and diverse range of applications in the areas of positioning and navigation, surveying, geodesy and geodynamics, and remote sensing and timing. Each chapter is written by international experts and amply illustrated with figures and photographs, making the book an invaluable resource for scientists, engineers, students and institutions alike.
