Estimation with Applications to Tracking and Navigation Yaakov Bar-Shalom,X. Rong Li,Thiagalingam Kirubarajan,2004-04-05 Expert coverage of the design and implementation of state estimation algorithms for tracking and navigation Estimation with Applications to Tracking and Navigation treats the estimation of various quantities from inherently inaccurate remote observations. It explains state estimator design using a balanced combination of linear systems, probability, and statistics. The authors provide a review of the necessary background mathematical techniques and offer an overview of the basic concepts in estimation. They then provide detailed treatments of all the major issues in estimation with a focus on applying these techniques to real systems. Other features include: * Problems that apply theoretical material to real-world applications * In-depth coverage of the Interacting Multiple Model (IMM) estimator * Companion DynaEst(TM) software for MATLAB(TM) implementation of Kalman filters and IMM estimators * Design guidelines for tracking filters Suitable for graduate engineering students and engineers working in remote sensors and tracking, Estimation with Applications to Tracking and Navigation provides expert coverage of this important area.

Programming GPS and OpenStreetMap Applications with Java Kristof Beiglböck,2012-01-27 Written by an expert in the development of GPS systems with digital maps and navigation, Programming GPS and OpenStreetMap Applications with Java: The RealObject Application Framework provides a concrete paradigm for object-oriented modeling and programming. It presents a thorough introduction to the use of available global positioning data for the development of applications involving digital maps. The author first describes the

different formats of GPS data and digital maps and shows how to use recorded GPS traces to replay and display this data on a digital map. Then, he works through in detail the processing steps of obtaining dedicated data from OpenStreetMaps and how to extract a network for a simple navigation application. For each topic covered—GPS data, OpenStreetMaps, and navigation—Java code is developed that can easily be adapted to the readers' needs and locality. Finally, all components are put together in a sample computer-game application modeled on the well-known board game, Scotland Yard. The computer game is intended to be a basis from which readers can develop and customize their own application for their desired geographical area. The developed application can be published on the Internet and made available for interactive multiplayer competition. This book provides a fun and interesting way to learn distributed programming with Java and real-world data. Open-source software is available on a companion website at www.roaf.de

  Event Data Recorder (EDR) Interpretation Christopher D Armstrong,2018-11-02 Collision Reconstruction Methodologies - Volume 7A - The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include: • Night Vision Study and Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction The goal is to provide the

4

latest technologies and methodologies being introduced into collision reconstruction – appealing to crash analysts, consultants and safety engineers alike.

  AI, Pandemic and Healthcare Nuoya Chen,2024-02-13 The demand for telehealth solutions has been growing exponentially after the Covid-19 pandemic. Hospitals remain understaffed, which leads to staff burnouts and unsatisfactory patient experience. They also find it difficult to use AI to reduce the workload for doctors and nurses. Doctors barely use data collected from wearables and home-use medical devices to make diagnosis. As generative AI advances, traditional medical device manufacturers are exploring with open innovation to transform into a software-based business model facing competition from large tech companies and startups. This book shares the perspectives from different stakeholders around the challenges of the use of AI in healthcare.

We uncover why different periods and places have caught our attention and imaginations at different times. We meet the characters, some celebrated and some forgotten, who found world-famous discoveries like the Rosetta Stone, the Terracotta Warriors and Machu Picchu. We investigate ancient human footprints, stunning shipwrecks, mythical princesses and surprising rituals as keyholes to the wonders of past civilisations. And we unravel how archaeological finds have often become emblems of modern fascinations and dilemmas. Crossing millions of

Fuzzy Systems and Data Mining VI A.J. Tallón-Ballesteros,2020-11-13 The interdisciplinary field of fuzzy logic encompass applications in the electrical, industrial, chemical and engineering realms as well as in areas of management and environmental issues, while data mining covers new approaches to big data, massive data, and scalable, parallel and distributed algorithms. This book presents papers from the 6th International Conference on Fuzzy Systems and Data Mining (FSDM 2020). The conference was originally due to be held from 13-16 November 2020 in Xiamen, China, but was changed to an online conference held on the same dates due to ongoing restrictions connected with the COVID-19 pandemic. The annual FSDM conference provides a platform for knowledge exchange between international experts, researchers academics and delegates from industry. This year, the committee received 316 submissions, of which 76 papers were selected for inclusion in the conference; an acceptance rate of 24%. The conference covers four main areas: fuzzy theory; algorithms and systems, which includes topics like stability; foundations and control; and fuzzy applications, which are widely used and cover various types of processing as well as hardware and architecture for big data and time series. Providing a current overview of research and developments in fuzzy logic and data mining, the book will be of interest to all those working in the field of data science.

Tracking People Anthea Hucklesby,Raymond

Holt,2023-08-30 Tracking technologies are now
ubiquitous and are part of many people's everyday
lives. Large sections of the population
voluntarily use devices and apps to track fitness,
medical conditions, sleep, vital signs or their
own or others' whereabouts. Governments, health
services, immigration and criminal justice
agencies increasingly rely upon tracking
technologies to monitor individuals' whereabouts,
behaviour, medical conditions and interventions.
Despite the human rights concerns of some
organisations and individuals, most wearers and
their significant others tend to welcome the
technologies. This paradox is only one of the many
fascinating challenges raised by the widespread
use of tracking technologies which are explored in
this book. This book critically explores the
ethical, legal, social, and technical issues
arising from the current and future use of
tracking technologies. It provides a unique and
wide-ranging discussion, via a cross-disciplinary
collection of essays, on issues relating to
technological devices and apps whose use is
imposed upon wearers or suggested by others,
whether agencies or individuals, including in the
domains of criminal justice, terrorism, and health
and social care. Contributions from leading
academics from across social sciences,
engineering, computer and data science,
philosophy, and health and social care address the
diverse uses of tracking technologies including
with individuals with dementia, defendants and
offenders, individuals with mental health
conditions and drug users alongside legal, ethical
and normative questions about the appropriate use
of these technologies. Cross-disciplinary themes
emerge focusing on both the benefits of the
technologies – freedom, improved safety, security,
well-being and autonomy, and increased capacity of
and efficiencies for public services - and the

challenges – implementation and operational costs, mission creep, privacy concerns, stigmatisation, whether the technologies work as expected, and useability and wearability for all wearers. This book is essential reading for academics and students engaged in criminology, criminal justice, socio-legal studies, science and technology studies, medicine, health and social care, psychology, engineering, computer and data science, philosophy, social policy and social work and security studies. It will also be of great interest to policy-makers, regulators, practitioners already deploying or considering using tracking technologies, and to current and potential wearers.
