Enabling Smart Urban Services with GPS Trajectory Data Chao Chen, Daqing Zhang, Yasha Wang, Hongyu Huang, 2021-04-01 With the proliferation of GPS devices in daily life, trajectory data that records where and when people move is now readily available on a large scale. As one of the most typical representatives, it has now become widely recognized that taxi trajectory data provides rich opportunities to enable promising smart urban services. Yet, a considerable gap still exists between the raw data available, and the extraction of actionable intelligence. This gap poses fundamental challenges on how we can achieve such intelligence. These challenges include inaccuracy issues, large data volumes to process, and sparse GPS data, to name but a few. Moreover, the movements of taxis and the leaving trajectory data are the result of a complex interplay between several parties, including drivers, passengers, travellers, urban planners, etc. In this book, we present our latest findings on mining taxi GPS trajectory data to enable a number of smart urban services, and to bring us one step closer to the vision of smart mobility. Firstly, we focus on some fundamental issues in trajectory data mining and analytics, including data map-matching, data compression, and data protection. Secondly, driven by the real needs and the most common concerns of each party involved, we formulate each problem mathematically and propose novel data mining or machine learning methods to solve it. Extensive evaluations with real-world datasets are also provided, to demonstrate the effectiveness and efficiency of using trajectory data. Unlike other books, which deal with people and goods transportation separately, this book also extends smart urban services to goods transportation by introducing the idea of crowdshipping, i.e., recruiting taxis to make package deliveries on the basis of real-time information. Since people and goods are two essential components of smart cities, we feel this extension is both logical and essential. Lastly, we discuss the most important scientific problems and open issues in mining GPS trajectory data.

Information Technology for Management Efraim Turban, Ephraim R. McLean, James C. Wetherbe, 2002 Taking a practical, managerial-oriented approach, this text stresses how information technology provides solutions to organisational problems and challenges, and emphasises the innovative use of information technology.

GIS Knut Grindrud, 2009 Today, few texts offer a comprehensive overview of geographic information systems (GIS). The literature common in academic circles is highly technical and pays little attention to the role GIS plays as a tool in the planning and shaping of society and the world around us. The contributors to this book feel strongly about the potential inherent in the concepts and methodologies that make up a GIS. Similarly, the contributors are aware of the limitations of the uniformly technical and structural approach that dominates discussions about GIS in many professional circles. This book is a guide and an educational, easy-to-understand journey that introduces the concepts and methodologies that lie behind today's GIS. It makes GIS both more familiar and more relevant to a far broader section of the professional circles which plan, organize, and shape our surroundings.

The Power of Premonitions Larry Dossey, 2009-10-05 The doctor - and bestselling author - who first demonstrated the healing effects of prayer now offers an unprecedented look at the science of premonitions. The Power of Premonitions takes readers through documented cases of premonitions, including a remarkable instance when an entire Nebraska community skipped church the very day it exploded; an examination of recent scientific study of 'presentiment'; a discussion of what it all means to daily life; and practical field-tested techniques for inviting premonitions. In this compelling new book Dossey uses cutting-edge science to prove the value of what has long been considered spiritual mumbo-jumbo. This is a book for the sceptical mind, but it's also for the believer's heart - because its author possesses the rare gift of having both.

Handbook of Mobility Data Mining, Volume 3 Haoran Zhang, 2023-01-29 Handbook of Mobility Data Mining: Volume Three: Mobility Data-Driven Applications introduces the fundamental technologies of mobile big data mining (MDM), advanced AI methods, and upper-level applications, helping readers comprehensively understand MDM with a bottom-up approach. The book explains how to preprocess mobile big data, visualize urban mobility, simulate and predict human travel behavior, and assess urban mobility characteristics and their matching performance as conditions and constraints in transport, emergency management, and sustainability development systems. The book contains crucial information for researchers, engineers, operators, administrators, and policymakers seeking greater understanding of current technologies' infra-knowledge structure and limitations. The book introduces how to design MDM platforms that adapt to the evolving mobility environment-and new types of transportation and users-based on an

integrated solution that utilizes sensing and communication capabilities to tackle significant challenges faced by the MDM field. This third volume looks at various cases studies to illustrate and explore the methods introduced in the first two volumes, covering topics such as Intelligent Transportation Management, Smart Emergency Management—detailing cases such as the Fukushima earthquake, Hurricane Katrina, and COVID-19—and Urban Sustainability Development, covering bicycle and railway travel behavior, mobility inequality, and road and light pollution inequality. Introduces MDM applications from six major areas: intelligent transportation management, shared transportation systems, disaster management, pandemic response, low-carbon transportation, and social equality Uses case studies to examine possible solutions that facilitate ethical, secure, and controlled emergency management based on mobile big data Helps develop policy innovations beneficial to citizens, businesses, and society Stems from the editor's strong network of global transport authorities and transport companies, providing a solid knowledge structure and data foundation as well as geographical and stakeholder coverage

This volume focuses on how to efficiently pre-process mobile big data to extract and utilize critical feature information of high-dimensional city people flow. The book first provides a conceptual theory and framework, then discusses data sources, trajectory map-matching, noise filtering, trajectory data segmentation, data quality assessment, and more, concluding with a chapter on privacy protection in mobile big data mining. Introduces the characteristics of different mobility data sources, like GPS, CDR, and sensor-based mobility data Summarizes existing visualization technologies of the current transportation system into a multi-view frame, covering the perspective of the three leading actors Provides recommendations for practical open-source tools and libraries for system visualization Stems from the editor's strong network of global transport authorities and transport companies, providing a solid knowledge structure and data foundation as well as geographical and stakeholder coverage

Disruptions as Opportunities Taiyi Sun,2023-03-01 *Disruptions as Opportunities: Governing Chinese Society with Interactive Authoritarianism* addresses the long-standing puzzle of why China outlived other one-party authoritarian regimes with particular attention to how the state manages an emerging civil society. Drawing upon

over 1,200 survey responses conducted in 126 villages in the Sichuan province, as well as 70 interviews conducted with Civil Society Organization (CSO) leaders and government officials, participant observation, and online research, the book proposes a new theory of interactive authoritarianism to explain how an adaptive authoritarian state manages nascent civil society. Sun argues that when new phenomena and forces are introduced into Chinese society, the Chinese state adopts a three-stage interactive approach toward societal actors: toleration, differentiation, and legalization without institutionalization. Sun looks to three disruptions—earthquakes, internet censorship, and social-media-based guerrilla resistance to the ride-sharing industry—to test his theory about the three-stage interactive authoritarian approach and argues that the Chinese government evolves and consolidates its power in moments of crisis.
