Mobile Vas R Krishna Kumar, 2010-07-10 Mobile Value Added Services (VAS) are the services that offer differentiation and the ability for mobile operators to charge a premium price. Mobile VAS include non-voice advanced messaging services such as SMS, MMS, MIM, and wireless data services based on wireless data bearer technologies such as GPS, GPRS, WAP. It also includes mobile gaming and voice-based services such as PTT and WDA. In the recent years, VAS has grown rapidly because of decreasing margin for the mobile network operators from basic voice services and advances in hardware and infrastructure technology. The objective of this book is to help the readers understand the usage, utility and implementation of mobile value added services. The content of the book has been divided in three parts. The first part provides introduction to important concepts on which VAS are implemented. It provides an overview of the core concepts like cellular networks, information access through Web interface and WAP. It also includes description of various value added services like voice based services, SMS based services, data based services, etc. the second part deals with implementation of mobile VAS. It discusses architecture, application development, security, and billing aspects. The third part discusses the future trends in the mobile industry. It includes location based services, mobile payment and mobile TV.

China Satellite Navigation Conference (CSNC) 2015 Proceedings: Volume III Jiadong Sun, Jingnan Liu, Shiwei Fan, Xiaochun Lu, 2015-04-21 China Satellite Navigation Conference (CSNC) 2015 Proceedings presents selected research papers from CSNC2015, held during 13th-15th May in Xian, China. The theme of CSNC2015 is Opening-up, Connectivity and Win-win. These papers discuss the technologies and applications of the Global Navigation Satellite System (GNSS), and the latest progress made in the China BeiDou System (BDS) especially. They are divided into 10 topics to match the corresponding sessions in CSNC2015, which broadly covered key topics in GNSS. Readers can learn about the BDS and keep abreast of the latest advances in GNSS techniques and applications. SUN Jiadong is the Chief Designer of the Compass/ BDS, and the academican of Chinese Academy of Sciences (CAS); LIU Jingnan is a professor at Wuhan University. FAN Shiwei is a researcher at China Satellite Navigation Office; LU Xiaochun is an academican of Chinese Academy of Sciences (CAS).

SMS and MMS Interworking in Mobile Networks A. Henry-Labordère, Vincent Jonack, 2004 Here is a comprehensive and highly practical guide to SMS and MMS interworking in GSM, TDMA, and CDMA mobile communications systems. The text provides the knowledge needed to plan SMS or MMS interworking both commercially and technically, and to develop software for SMS and MMS centers.

MMS Daniel Ralph, Paul Graham, 2004-04-21 MMS has evolved from the huge popularity of the SMS text service for GSM networks. It is a departure from the transport mechanism used for SMS (which is based on the GSM signalling channels) to the use of IP to transport messages within the MMS network. To this end MMS has similarities with Internet email and standard IETF protocols. As with any new technology it is difficult to accurately predict the position within the next 5 years, although based on previous experience with WAP and SMS it would be fair to say that these protocols will increase in usage over the next 5 years and become legacy for a further 5 years following which, users will migrate onto the next wave of messaging. Significant revenue growth and data usage is expected to be driven by consumer usage of MMS. But MMS technology offers more than just a broadening of message content. With MMS, it is not only possible to send your multimedia messages from one phone to another, but also from phone to email, and vice versa. This feature dramatically increases the possibilities of mobile communication, both for private and corporate use. Multimedia messaging will reshape the landscape of mobile communication, making it more personal, more versatile, and more expressive than ever before. MMS: Is the first book to address how MMS (and the use of IP to transport messages) will affect existing infrastructure and business models. Covers the fundamental changes to mail and billing systems. Includes future recommendations, such as interoperability and evolution. Presents an overview of the MMS technology components. Drawing on the authors hands-on experience in the implementation of MMS technology (developing,

billing and delivering services) at BT, this innovative book will appeal to engineering managers, network operators, market analysts, business decision makers, content providers and operator organizations.

GPS Trends in Precise Terrestrial, Airborne, and Spaceborne Applications Gerhard Beutler, Günter Hein, William Melbourne, Günter Seeber, 2012-12-06 These proceedings include most of the papers presented at the IAG Symposium GPS Trends in Precise Terrestrial, Airborne, and Spaceborne Applications held in July 1995 during the XXI-th IUGG General Assembly in Boulder, Colorado. The symposium was jointly organized by the IAG and the International Union of Surveys and Mapping (IUSM). The symposium was divided into four sessions, namely (1) The International GPS Service for Geodynamics (IGS) and other Permanent Networks, (2) Spaceborne Applications of the GPS, (3) Kinematic Applications of the GPS, and (4) The GPS and its Relations to Geophysics. The main purpose was to give an overview of the state of the art in 1995 of the applications of the GPS to geodynamics, geodesy, surveying, and navigation. The call for papers generated a flood of originally more than 70 abstracts; quite a few could be redirected to other symposia, but still 56 papers found their way into these proceedings. We thus conclude that the volume gives a rather complete overview of GPS Trends in Precise Terrestrial, Airborne, and Spaceborne Applications in the year 1995.

GNSS Remote Sensing Shuanggen Jin, Estel Cardellach, Feiqin Xie, 2013-10-01 The versatile and available GNSS signals can detect the Earth's surface environments as a new, highly precise, continuous, all-weather and near-real-time remote sensing tool. This book presents the theory and methods of GNSS remote sensing as well as its applications in the atmosphere, oceans, land and hydrology. Ground-based atmospheric sensing, space-borne atmospheric sensing, reflectometry, ocean remote sensing, hydrology sensing as well as cryosphere sensing with the GNSS will be discussed per chapter in the book.

V Hotine-Marussi Symposium on Mathematical Geodesy Fernando Sansò, 2013-03-09 Just as in the era of great achievements by scientists such as Newton and Gauss, the mathematical theory of geodesy is continuing the tradition of producing exciting theoretical results, but today the advances are due to the great technological push in the era of satellites for earth observations and large computers for calculations. Every four years a symposium on methodological matters documents this ongoing development in many related underlying areas such as estimation theory, stochastic modelling, inverse problems, and satellite-positioning global-reference systems. This book presents developments in geodesy and related sciences, including applied mathematics, among which are many new results of high intellectual value to help readers stay on top of the latest happenings in

the field.

Multifunctional Operation and Application of GPS Rustam B. Rustamov,A.M. Hashimov,2018-05-30 Today, Global Positioning System (GPS) has taken a significant place in human life with wide-scale applications. It is a multi-use, space-based radio-navigation system, embracing defense and security, civil, commercial, and scientific research needs. Taking into account the importance of the system, it has been suggested to present current advances of GPS with attention focused on vital aspects of technology. This book provides a general description of GPS, GNSS, and GLONASS with reference to the improvement of characteristics of the segments, including software applications and the equipment itself containing GPS. The book also provides information on application areas. Equally, a number of common shortcomings and errors are described, and elimination and minimization of such consequences are demonstrated.

GPS for Geodesy Peter J.G. Teunissen,Alfred Kleusberg,2012-12-06 An in-depth description of the theory and mathematical models behind the application of the global positioning system in geodesy and geodynamics. The contributions by leading experts in the field ensure a continuous flow of ideas and developments. The mathematical models for GPS measurements are developed in the first half of the book, and these are followed by GPS solutions for geodetic applications on local, regional and global scales.
