GPS Outdoors Russell Helms, 2011-06-15 For about \$150 anyone can access the United States' multi-billion dollar GPS program. Using *GPS Outdoors: A Practical Guide for Hikers, Bikers, Paddlers, and Climbers* shows readers how to plug in and enhance most any outdoor experience. Whether a hiker on a weekend trip through the Great Smokies, a backpacker cruising the Continental Divide Trail, a mountain biker kicking up dust in Moab, a paddler running the Lewis and Clark bicentennial route, or a climber pre-scouting the routes up Mount Shasta, a simple handheld GPS unit is fun, useful, and can even be a lifesaver. Described in conjunction with today's most popular GPS software, easy to understand information enables readers to: - Plan a trip - Navigate along a route - Gather data from the outing - Analyze trip data after the trip Information is power, and a GPS unit is today's preferred tool to harness the power of navigational technology for a more enjoyable, more informative, and possibly safer outdoor experience.

An Automated Tool for Mission Planning in GPS-Denied Areas, 2006 GPS is critical to many military and civilian systems. It is therefore incumbent upon operational planners to ensure GPS integrity to friendly military forces and civilians, provide protection from GPS-guided weapons, and conduct testing of advanced, anti-jam equipment for use in GPS-denied areas. In order to support these complementary planning functions, the Navy is developing a software toolbox to evaluate GPS performance in specific scenarios, to automatically optimize vehicle routes to avoid GPS jamming, and to optimize placement and configuration of self-protection jammers or jammers used in testing anti-jam GPS equipment. The toolbox includes multiple optimization algorithms, various propagation algorithms suited to different conditions, a flexible software architecture for controlling optimization, and an intuitive graphical user interface. A prototype version of the toolbox has been delivered to the Navy. This paper describes the design and features of the software and presents an example of optimal jammer placement for an equipment test scenario.

GPS Stochastic Modelling Xiaoguang Luo,2013-07-06 Global Navigation Satellite Systems (GNSS), such as GPS, have become an efficient, reliable and standard tool for a wide range of applications. However, when processing GNSS data, the stochastic model characterising the precision of observations and the correlations between them is usually simplified and incomplete, leading to overly optimistic accuracy estimates. This work extends the stochastic model using signal-to-noise ratio (SNR) measurements and time series analysis of observation residuals. The proposed SNR-based observation weighting model significantly improves the results of GPS data analysis, while the temporal correlation of GPS observation noise can be efficiently described by means of autoregressive moving average (ARMA) processes. Furthermore, this work includes an up-to-date overview of the GNSS error effects and a comprehensive description of various mathematical methods.
