How to Make Money Installing GPS Trackers for Cars A. B. Lawal,2019-09-13 About the Book The market for GPS tracking services is a rapidly growing and relatively untapped opportunity for small businesses and entrepreneurs. Currently there are more than 12 million registered commercial vehicles in the USA alone. In Latin America, there are over 20 million. However, a very small percentage of these vehicles are protected by fleet management software. Fortunately, this has started to change. There are many facets in a GPS car tracking business that are profitable for entrepreneurs (and that's why you should read this guide), including the benefit of recurring revenue from service subscriptions. Before you start your GPS vehicle tracking business, you should consider several steps that will help your company to succeed. Use this guide to walk yourself through some important steps that you must take to launch a successful GPS vehicle tracking business. Finally, In the last chapter of my guide, I introduce a world-class GPS tracking platform provider (vendor) that will help you get started, and put your new GPS tracking business on the map. They will ensure you're in business for yourself, but never by yourself. A link to a demo of their GPS tracking software is provided for you so you can learn how their team of GPS experts can start you up in business.

GPS Tracking with Java EE Components Kristof Beiglböck,2018-08-06 GPS Tracking with Java EE Components: Challenges of Connected Cars highlights how the self-driving car is actually changing the automotive industry, from programming embedded software to hosting services and data crunching, in real time, with really big data. The book analyzes how the challenges of the Self Driving Car (SDC) exceed the limits of a classical GPS Tracking System (GTS.) It provides a guidebook on setting up a tracking system by customizing its components. It also provides an overview of the prototyping and modeling process, and how the reader can modify this process for his or her own software. Every component is introduced in detail and includes a number of design decisions for development. The book introduces Java EE (JEE) Modules, and shows how they can be combined to a customizable GTS, and used as seed components to enrich existing systems with live tracking. The book also explores how to merge tracking and mapping to guide SDCs, and focuses on client server programming to provide useful information. It also discusses the challenges involved with the live coordination of moving cars. This book is designed to aid GTS developers and engineers in the automotive industry. It can also help Java Developers, not only interested in GPS Tracking, but in modern software design from many individual modules. Source code and sample applications will be available on the book's website.

Building a Dedicated GSM GPS Module Tracking System for Fleet Management Franjieh El Khoury,Antoine Zgheib,2018-01-31 This book shows how to build a INFelecPHY GPS Unit (IEP-GPS) tracking system for fleet management that is based on 3G and GPRS modules. This model should provide reliability since it deals with several protocols: 1) HTTP and HTTPS to navigate, download and upload in real time the information to a web server, 2) FFTP and FTTPS to handle in a non-real time the files to the web application, and 3) SMTP and POP3 to send and receive email directly from the unit in case of any alert. Similar to a mobile device, but without screen for display, it is multifunctional because it links to a GPRS module, a camera, a speaker, headphone, a keypad and screen.

Smart-Puter Base GPS Tracker Using Areal Device Naveen Kolla,2012-04 We have designed 'GPS based Automated Guided Vehicle which flies to any required place if we know the latitude and longitude of that particular location.This project concludes that it's an economical and effective way to reach an unknown location. Now in our project we completed up to the point of interfacing with micro-controller i.e., we have designed sensor circuits.In the future the system will be implemented to find the location of different vehicle, if they met with any crashes. Also it can be used in the enabling technologies, such as scheduling and routing.Automated guided vehicles (AGVs) are becoming popular in automatic materials handling systems, flexible manufacturing systems and even container-handling applications.

Pioneering Technologies for Mountaineers. Developing an IoT-based Health and GPS Tracking System Bandar Hezam,2023-09-14 Bachelor Thesis from the year 2023 in the subject Sport - Sports Equipment and Supplies, grade: B+, , course: Mechatronics, language: English, abstract: In the contemporary realm of adventure sports, the safety of mountaineers takes center stage. This study aims to forge an IoT-based solution capable of real-time monitoring of not only the location but the health of mountaineers, thereby minimizing potential risks and facilitating rapid response in emergencies. The summary offers a detailed overview of the various chapters and sections integral to this pivotal research. The introduction highlights the prominence of mountaineering as a global sport and delineates the challenges and risks associated with it. It emphasizes the imperative for a reliable health monitoring system that withstands physical constraints while being lightweight and wearable. Chapter one delves deeply into the problem statement and the study's objective, focusing particularly on creating a wearable device that monitors the health and location of mountaineers in real time. Chapter two furnishes a comprehensive review of the existing literature, particularly focusing on the diverse technologies and systems presently utilized for health monitoring and navigation. In chapter three, the concept development and research methodology are detailed extensively. Here, the various phases of the project, including material and software selection, as well as the proposed methodology, are discussed. The document concludes with an extensive repository of references and an appendix that includes a literature review matrix.

Spatial Database for GPS Wildlife Tracking Data Ferdinando Urbano, Francesca Cagnacci, 2014-03-12 This book guides animal ecologists, biologists and wildlife and data managers through a step-by-step procedure to build their own advanced software platforms to manage and process wildlife tracking data. This unique, problem-solving-oriented guide focuses on how to extract the most from GPS animal tracking data, while preventing error propagation and optimizing analysis performance. Based on the open source PostgreSQL/PostGIS spatial database, the software platform will allow researchers and managers to integrate and harmonize GPS tracking data together with animal characteristics, environmental data sets, including remote sensing image time series, and other bio-logged data, such as acceleration data. Moreover, the book shows how the powerful R statistical environment can be integrated into the software platform, either connecting the database with R, or embedding the same tools in the database through the PostgreSQL extension PL/R. The client/server architecture allows users to remotely connect a number of software applications that can be used as a database front end, including GIS software and WebGIS. Each chapter offers a real-world data management and processing problem that is discussed in its biological context; solutions are proposed and exemplified through ad hoc SQL code, progressively exploring the potential of spatial database functions applied to the respective wildlife tracking case. Finally, wildlife tracking management issues are discussed in the increasingly widespread framework of collaborative science and data sharing. GPS animal telemetry data from a real study, freely available online, are used to demonstrate the proposed examples. This book is also suitable for undergraduate and graduate students, if accompanied by the basics of databases.

AIoT and Big Data Analytics for Smart Healthcare Applications Shreyas Suresh Rao, Steven Lawrence Fernandes, Chandra Singh, Rathishchandra R. Gatti, Harisha A., Rohanchandra R. Gatty, 2023-12-26 AIoT (Artificial Intelligence of Things) and Big Data Analytics are catalyzing a healthcare revolution. This book is an accessible volume that summarizes the information available. In this book, researchers explore how AIoT and Big Data can seamlessly integrate into healthcare, enhancing medical services and devices while adhering to established protocols. The book demonstrates the crucial role of these technologies during healthcare crises like the COVID-19 pandemic. It presents novel solutions and computational techniques powered by AIoT, Machine Learning, and Deep Learning, providing a new frontier in healthcare problem-solving. Key Features: Real-Life Illustrations: Real-world examples showcase AIoT and Big Data in action, highlighting their impact in healthcare. Comprehensive Exploration: The book offers a thorough examination of AIoT, Big Data, and their harmonious synergy within the healthcare landscape. Visual Aids: Complex concepts become approachable through diagrams, flowcharts, and infographics, making technical processes and system designs more digestible. Ethical Insights: Delving

into the ethical dimensions of AIoT and Big Data, it addresses concerns like data bias, patient consent, and transparency in healthcare. Forward-Looking Discourse: The book engages with emerging trends, potential innovations, and the future direction of AIoT and Big Data, making it a compass for healthcare transformation. Researchers, whether from academia, industry, or research and development organizations, interested in AIoT, Big Data, artificial intelligence, and healthcare optimization, will find this book informative. It also serves as an update for tech enthusiasts who want to explore the future of healthcare powered by AI and data.

Find cell phones' area online by cell tower triangulation utilizing LAC (Location Area Code) and Celled from PC, iphone or Androide phone. Cell tower triangulation utilizes the LAC and Cellid to focus the position of a cellular smartphone. With information from no less than three cell towers, this strategy can ascertain a handset's area exactly. Each one base station covers a certain region, the more cell towers in your general vicinity, the more precise result it delivers. So the thickness of cell towers decides the precision. For the most part, the thickness is higher in the urban zones particularly at downtown. While in country territories, where there are less cell towers, the result is less precise.
