*The Tracker* Chad Zunker,2015-11-23 Sam doesn't have a business card. Nothing that says Samuel W. Callahan, Political Tracker, Esq. Instead, he gets paid to hide in crowds, following candidates on the campaign trail to record their every misstep, public and private. It's something Sam's oddly good at since he grew up on the streets. And it's not like he has anyone waiting for him at home. After a life spent in and out of foster care, Sam isn't very good at getting close to people, or letting people get close to him. He just needs enough money to finish up at Georgetown Law and find a decent job so he can finally stop running. But when Sam witnesses something that could destroy a rising political star, he has no choice but to run. In the line of fire, Sam must outrun the memories of his past if he wants to have any hope of outrunning an assassin's bullets. \* Now in development for TV series A gritty, compelling and altogether engrossing novel that reads as if ripped from the headlines. I couldn't turn the pages fast enough. Chad Zunker is the real deal. -- Christopher Reich, New York Times Bestselling Author of Numbered Account and Rules of Deception Good Will Hunting meets The Bourne Identity. -- Fred Burton, New York Times Bestselling Author of Under Fire

**Pinpoint: How GPS is Changing Technology, Culture, and Our Minds** Greg Milner,2016-05-03 One of the most mesmerizing and exhilarating, yet alarming modern technology books...an extraordinary tale. —Gillian Tett, Financial Times Pinpoint tells the fascinating story of a hidden system that touches nearly every aspect of modern life. Tracking the development of GPS from its origins as a bomb guidance system to its present ubiquity, Greg Milner examines the technology's double-edged effect on the way we live, work, and travel. Savvy and original, this sweeping scientific history offers startling insight into how humans understand their place in the world.

**Mobile Entity Localization and Tracking in GPS-less Environments** Richard Fuller,Xenofon D. Koutsoukos,2009-09-11 This book constitutes the refereed proceedings of the second International Workshop on Mobile Entity Localization and Tracking in GPS-less Environments, MELT, held in Orlando, Florida, USA, in September 2009 in conjunction with the 11th International Conference on Ubiquitous Computing (UbiComp 2009). MELT is a forum for the state-of-the-art technologies in mobile localization and tracking and novel applications of location-based services. The research contributions in these proceedings cover significant aspects of localization and tracking of mobile devices that include techniques suitable for smart phones and mobile sensor networks in both outdoor and indoor environments using diverse sensors and radio signals. Novel theoretical methods, algorithmic design and analysis, application development, and experimental studies are presented in 14 papers that were reviewed carefully by the program committee. In addition, three invited papers, with topics on location determination using RF systems, Cramer-Rao-Bound analysis for indoor localization and approaches targeting mobile sensor networks, are also included in the proceedings.

*Tracker220* Jamie Krakover,2021-09-14 When everyone has a brain-interfacing tracking chip, one glitch threatens the entire network. Kaya Weiss is that glitch. Through thoughts and blinks, Kaya can access anyone or anything on the tracker network. But the authorities monitor everything-where Kaya goes, who she talks to, and what she searches. And without the ability to turn it off, Kaya and her family can't observe a tech-free Shabbat. To fix the glitch, the authorities slice into her skull to reset her tracker, leaving Kaya to question more than the system's invasion into her faith. Kaya won't be a lab rat again. Evading the authorities requires some serious tech skills the rogue underground Ghosts can offer. But Kaya's not sure she can trust them-even if their top tech wiz, Bailen, has interest in her running deeper than her bum tracker. Kaya must decide if gaining freedom is worth losing her tracker's infinite knowledge-because to take down the tracker network, she must betray the only tech she's ever known.

GPS G.S. Prentzas,2009-08-01 This book takes a product students are interested in, GPS, and provides them with details on how the product is created in the global market place of the 21st century.

But GPS is used for more than just finding your way! Readers will be fascinated by its beginnings as a military system and its many modern uses, such as catching criminals, predicting earthquakes, and creating maps. Colorful photographs illustrate real-life examples of GPS technology, military and civilian, and informative text clearly explains the science and math concepts behind the satellites and receivers used all over the world.

**Launch Strategy for a GPS-based Package Tracker Product** Jürgen Biermann,2006 The objective of this paper is to present a recommendation for a launch strategy for a new Package Tracker Product based on enhanced GPS location technology for a GPS software company, Guardian Mobile Monitoring Systems. We will first give an overview of Global Positioning System (GPS) technology and its more recent advancements and explain the potential for a package tracker product. Secondly, we will examine possible target market segments. Thirdly, we will perform an internal analysis of Guardian Mobile Monitoring Systems including their current products and an external analysis of the industry. In conclusion, we will weigh three strategies and present a recommended strategy. We will elaborate on the recommended strategy and outline a potential high

level implementation plan.

**Tracker** Darryl Varner, John McLean,2003-05-19 In 1947, on a military base absent from any map, a black ops project took place which, even after more than fifty years, is still categorically denied. The best and brightest Allied scientists met with a single purpose in mind: to reverse engineer a crippled UFO, prying the alien technology from within and claiming it for their own. In time, secrets pulled from the extraterrestrial craft send close friends Ed Reilly and Gil Randolph on a roller coaster ride that rushes from the desolate Nevada desert to a closely guarded industrial complex nestled in the pine forests of northern California. Working at San Diego's North Island Naval Station, he encounters unusual problems with a submarine tracking system manufactured by prime military contractor Randolph & Van Wyck -- the core company of Gil Randolph's industrial empire. Soon, information provided by his grandfather launches Charlie on a frantic mission to deflect a deadly attack against US submarines, orchestrated by rogue North Korean military officers. In the meantime, Ed faces his own dilemma: finding a way to send Charlie data crucial to the success of the mission and staying alive long enough to do it.

**A Tracker Assessment Tool for Comparing Tracker Performance** S. B. Colegrove, S. J. Davey, B. Cheung, Defence Science and Technology Organisation (Australia). Information Sciences Laboratory,2005 This technical report describes a method for assessing the performance of automatic tracking systems against various metrics. These metrics are grouped in the categories of track establishment, track maintenance, track error and false tracks. A desired performance level is defined for each metric, and the probability that a particular track will meet this performance level is empirically approximated from archived sensor data. The individual metric probabilities are combined using a weighted average to produce an overall tracker rating. An important feature of the approach is that absolute truth is assumed to be unavailable, and output of the trackers under test is instead compared with incomplete truth. The incomplete truth is produced by a manual inspection of the data and through editing the output of the best available tracking algorithm. This report also discusses an implementation of the assessment method for Over-the-Horizon Radar. This software package is referred to as the Tracker Assessment Tool, and is used to compare four alternative tracking algorithms.

*The Tracker* Thomas McDonald,2019-10-15 Gary Mitchell went to Houston to set the world on fire. He was good at his job and made a lot of money, but he had bad luck with women, always picking the wrong woman. He had bought a large ranch in Sugarland but lost his woman to cheating. He went into the wilds of west Texas and almost lost his life. He was saved by a wolf which he brought back to the ranch as his partner. They started a business You lose it and we find it. They tracked down anything that was lost, animal or human. He met Judy and was going to marry her, but she was killed by a drunk driver. Gary took a job to go to Colombia to rescue a woman from a drug lord. Would he finally find true love? Kristine didn't know James Lopez was married until she went to Colombia with him. She had been a fool.

*GPS* Paul E. Ceruzzi,2018-11-06 A concise history of GPS, from its military origins to its commercial applications and ubiquity in everyday life. GPS is ubiquitous in everyday life. GPS mapping is standard equipment in many new cars and geolocation services are embedded in smart phones. GPS makes Uber and Lyft possible; driverless cars won't be able to drive without it. In this volume in the MIT Press Essential Knowledge series, Paul Ceruzzi offers a concise history of GPS, explaining how a once-obscure space technology became an invisible piece of our infrastructure, as essential to modern life as electric power or clean water. GPS relays precise time and positioning information from orbiting satellites to receivers on the ground, at sea, and in the air. It operates worldwide, and its basic signals are free, although private companies can commodify the data provided. Ceruzzi recounts the origins of GPS and its predecessor technologies, including early aircraft navigation systems and satellites. He describes the invention of GPS as a space technology in the post-Apollo, pre-Space Shuttle years and its first military and commercial uses. Ceruzzi explains how the convergence of three major technological developments—the microprocessor, the Internet, and cellular telephony—enabled the development and application of GPS technology. Recognizing the importance of satellite positioning systems in a shifting geopolitical landscape—and perhaps doubting U.S. assurances of perpetual GPS availability—other countries are now building or have already developed their own systems, and Ceruzzi reports on these efforts in the European Union, Russia, India, China, and Japan.

**Pinpoint** Greg Milner,2016-05-17 A Financial Times Best Book of 2016 A Sunday Times Best Book of 2016 Pinpoint tells the story of GPS, a scientific marvel that enables almost all modern technology—but is changing us in profound ways. Over the last fifty years, humanity has developed an extraordinary shared utility: the Global Positioning System. Even as it guides us across town, GPS helps land planes, route mobile calls, anticipate earthquakes, predict weather, locate oil deposits, measure neutrinos, grow our food, and regulate global finance. It is as ubiquitous and essential as another Cold War technology, the Internet. In Pinpoint, Greg Milner takes us on a fascinating tour of a hidden system that touches almost every aspect of our modern life. While GPS has brought us breathtakingly accurate information about our planetary environment and physical space, it has also created new forms of human behavior. We have let it saturate the world's systems so completely and so quickly that we are just beginning to confront the possible consequences. A single GPS timing flaw, whether accidental or malicious, could bring down the electrical grid, hijack drones, or halt the world financial system. The use, and potential misuse, of GPS data by government and corporations raise disturbing questions about ethics and privacy. GPS may be altering the nature of human cognition—possibly even rearranging the gray matter in our heads. Pinpoint tells the sweeping story of GPS from its conceptual origins as a bomb guidance system to its presence in almost everything we do. Milner examines the different ways humans have understood physical space, delves into the neuroscience of cognitive maps, and questions GPS's double-edged effect on our culture. A fascinating and original story of the scientific urge toward precision, Pinpoint offers startling insight into how humans understand their place in the world.
