ActionScript 3.0 Design Patterns William Sanders, Chandima Cumaranatunge, 2007-07-16

Now that ActionScript is reengineered from top to bottom as a true object-oriented programming (OOP) language, reusable design patterns are an ideal way to solve common problems in Flash and Flex applications. If you're an experienced Flash or Flex developer ready to tackle sophisticated programming techniques with ActionScript 3.0, this hands-on introduction to design patterns is the book you need. ActionScript 3.0 Design Patterns takes you step by step through the process, first by explaining how design patterns provide a clear road map for structuring code that actually makes OOP languages easier to learn and use. You then learn about various types of design patterns and construct small abstract examples before trying your hand at building full-fledged working applications outlined in the book. Topics in ActionScript 3.0 Design Patterns include: Key features of ActionScript 3.0 and why it became an OOP language OOP characteristics, such as classes, abstraction, inheritance, and polymorphism The benefits of using design patterns Creational patterns, including Factory and Singleton patterns Structural patterns, including Decorator, Adapter, and Composite patterns

Behavioral patterns, including Command, Observer, Strategy, and State patterns Multiple design patterns, including Model-View-Controller and Symmetric Proxy designs During the course of the book, you'll work with examples of increasing complexity, such as an e-business application with service options that users can select, an interface for selecting a class of products and individual products in each class, an action game application, a video record and playback application, and many more. Whether you're coming to Flash and Flex from Java or C++, or have experience with ActionScript 2.0, ActionScript 3.0 Design Patterns will have you constructing truly elegant solutions for your Flash and Flex applications in no time.

Enabling Smart Urban Services with GPS Trajectory Data Chao Chen, Daqing Zhang, Yasha Wang, Hongyu Huang, 2021-04-01 With the proliferation of GPS devices in daily life, trajectory data that records where and when people move is now readily available on a large scale. As one of the most typical representatives, it has now become widely recognized that taxi trajectory data provides rich opportunities to enable promising smart urban services. Yet, a considerable gap still exists between the raw data available, and the extraction of actionable intelligence. This gap poses

fundamental challenges on how we can achieve such intelligence. These challenges include inaccuracy issues, large data volumes to process, and sparse GPS data, to name but a few. Moreover, the movements of taxis and the leaving trajectory data are the result of a complex interplay between several parties, including drivers, passengers, travellers, urban planners, etc. In this book, we present our latest findings on mining taxi GPS trajectory data to enable a number of smart urban services, and to bring us one step closer to the vision of smart mobility. Firstly, we focus on some fundamental issues in trajectory data mining and analytics, including data map-matching, data compression, and data protection. Secondly, driven by the real needs and the most common concerns of each party involved, we formulate each problem mathematically and propose novel data mining or machine learning methods to solve it. Extensive evaluations with real-world datasets are also provided, to demonstrate the effectiveness and efficiency of using trajectory data. Unlike other books, which deal with people and goods transportation separately, this book also extends smart urban services to goods transportation by introducing the idea of crowdshipping, i.e., recruiting taxis to make package deliveries on the basis of real-time information. Since

people and goods are two essential components of smart cities, we feel this extension is both logical and essential. Lastly, we discuss the most important scientific problems and open issues in mining GPS trajectory data.

Restructuring The Medical Profession: The Intraprofessional Relations Of Gps And Hospital Consultants Baeza, Juan, 2005-11-01 What is the relationship between general practitioners (GPs) and hospital consultants in the United Kingdom? How does government health policy impact upon GPs and hospital consultants? What influence does the medical profession have upon policy makers in the United Kingdom? The medical profession occupies a dominant position within the British health care system and as such is able to influence the development and implementation of health policy. The main division within the medical profession lies between general practitioners and hospital consultants. This book provides a comprehensive analysis of British health policy over the past twenty-five years. Drawing on data from case studies, it provides empirical evidence of the impact of recent health policies upon the National Health Service (in general) and the medical profession (in particular). The case studies provide an analysis of the impact of

the 1991 NHS reforms, as well as examining the ongoing influence of the post 1999 NHS reforms upon these intraprofessional relations. What emerges is that the relationship between GPs and hospital consultants is transforming from a collegial to a more managerial relationship. This book sheds light on the resulting development of intraprofessional relations between GPs and hospital consultants within the NHS. Restructuring the Medical Profession is key reading for undergraduate and postgraduate students, researchers and professionals in the fields of social policy and health policy. It is also of interest to health service practitioners, health service researchers and health policy makers.

GPs, Politics and Medical Professional Protest in Britain, 1880–1948 Chris Locke, 2023-11-08 This book charts the journey of British General Practitioners (GPs) towards professional self-realisation through the development of a political consciousness manifested in a series of bruising encounters with government. GPs are an essential part of the social fabric of modern Britain but as a group have always felt undervalued, clashing with successive governments over the terms on which they offered their services to the public. Explaining the background to these disputes and the motives of GPs from a sociological perspective, this research casts

new light on some defining moments in the creation of the modern British state, from National Health Insurance to the National Health Service, and the history of the British medical profession. It examines these events from the point of view of the professionals intimately involved in and affected by them, using both established sources, like Ministry of Health records, an in-depth analysis of rarely studied records of professional bodies, and previously unresearched archive material. The result is a fascinating account of conflict and cooperation, and of heroic, and less-than-heroic, defiance of political authority, involving interactions between complex personalities and competing ideologies. Scholarly yet readable, this book will be of interest to the general reader as much as to medical practitioners and historians.

Monitoring the Performance and Operation of Cellular Radio Interfaces using Professional Measurement Tools. Baldomero Coll-Perales, Miguel Sepulcre Ribes, Javier Gozálvez

Sempere., 2014-11-11 El presente libro ha sido diseñado para ayudar a los estudiantes del Grado en Ingeniería de Tecnologías de Telecomunicación en el empleo de las herramientas utilizadas en las prácticas de las asignaturas de comunicaciones móviles, y para mostrarles cómo analizar y entender los resultados que se

obtienen con dichas herramientas. Para ello, en primer lugar el libro describe de forma didáctica cómo utilizar las herramientas de medida profesionales empleadas en las prácticas de comunicaciones móviles en la UMH. Dichas herramientas se emplean habitualmente por ingenieros de planificación radio para monitorizar en tiempo real el rendimiento de las redes de comunicaciones móviles mediante drive tests. Dicha descripción incluye una presentación detallada de la herramienta de testeo profesional Nemo Handy desarrollada por Anite. Dicha herramienta se incluye en un terminal celular en modo ingeniería, empleado para monitorizar en tiempo real el funcionamiento y rendimiento de las redes celulares, y tomar medidas para su posterior análisis. Dicho análisis se realiza empleando la herramienta Nemo Outdoor, descrita con detalle también en el libro, incluyendo ejemplos sobre cómo realizar los procesados más relevantes. Finalmente, el libro incluye y analiza una serie de medidas se han realizado en un sistema celular UMTS/HSDPA en activo en Elche. En particular, se explica el proceso seguido para realizar dichas medidas empleando Nemo Handy, y se analizan mediante Nemo Outdoor las principales funcionalidades de un sistema celular, como el establecimiento y finalización de llamadas, la selección y re-

selección de celdas, el traspaso y el análisis de las descargas de datos y parámetros radio. This book has been designed to guide the students of the Bachelor's in Telecommunications Technology Engineering towards a clear understanding of how to use the laboratory tools, and show them how to analyze and understand the collected measurements. In this context, the book first introduces and describes how to use the professional measurement tools employed in the laboratory activities of the mobile communications course at UMH. These tools are commonly used by cellular radio engineers to monitor in real-time the performance of cellular networks through drive tests. The book first presents the Nemo Handy professional measurement testing tool developed by Anite. This tool is included in an engineering-mode cellular handset used to monitor in real-time the operation of cellular networks, and collect measurements for post-processing. Such processing is done using the Nemo Outdoor tool that is also introduced in the book, including examples of how to perform the most relevant processing actions. Finally, this book shows how to conduct some measurement and analysis processes using Nemo Handy and Nemo Outdoor. The measurements have been conducted over live UMTS and HSDPA networks in the city of

Elche, and cover the analysis of important cellular functionalities like establishment and release of a call, cell selection and reselection, handovers, and analysis of data downloads and cellular parameters. This chapter shows with practical examples how to conduct the measurements using Nemo Handy, and how to interpret with Nemo Outdoor the exchanged cellular signaling messages in order to monitor the operation of cellular networks.

Managing Healthcare Information Systems with Web-Enabled Technologies Eder, Lauren B., 1999-07-01 Healthcare organizations are undergoing major reorganizations and adjustments to meet the increasing demands of improved healthcare access and quality, as well as lowered costs. As the use of information technology to process medical data increases, much of the critical information necessary to meet these challenges is being stored in digital format. Web-enabled information technologies can provide the means for greater access and more effective integration of healthcare information from disparate computer applications and other information resources. Managing Healthcare Information Systems with Web-Enabled Technologies presents studies from leading researchers and practitioners focusing on the current challenges, directions, trends and opportunities associated with

healthcare organizations and their strategic use of Web-enabled technologies.

Prescribing costs in primary care Great Britain: National Audit Office,2007-05-18 The National Health Service spends £8 billion a year on prescription drugs in primary care in England. This has grown 60% in real terms over the last decade and the trend continues to be upward. This report examines how the money could be spent more efficiently, without compromising clinical outcomes. It looks principally at the scope for more cost-effective prescribing; supporting the GPs and PCTs in getting better value for money; and the wastage of drugs. For four groups of drugs (which account for 19% of the total drugs bill), it finds a wide disparity in prescribing behaviour. It estimates that if all PCTs attained the standard of the best 25%, £200 million could be saved. The analysis shows that there are several mechanism to improve value for money. They include: personalised communication with GPs from local experts, financial and practical incentives, and involving the whole primary and local care community in decisions about drug policy. Wastage of drugs is a problem but the level is not monitored and the uptake of initiatives to reduce the amount of waste is low. Assessing whether local

prescribing volumes are consistent with clinical need is complex, but combining prescription data with local prevalence data can provide benchmark information.

The Green Challenge Dick Richardson,Chris Rootes,2006-01-16 The Green Challenge is an up-to-date and comprehensive account of the development of Green parties in Western Europe, and includes an account of the development since 1989 of an East European Green movement. Blending theory and empirical analysis, the book contains chapters on each of the main western European cases and on a number of other less-studied ones. These are designed to demonstrate the shifting balance of party-political competition the factor the authors believe most strongly influences the fortunes of the Greens. The editors also integrate a valuable analysis of the environmentally-degraded Czech Republic, where the Green parties' lack of electoral success has puzzled many observers.

Geospatial Information Technology for Emergency Response

Sisi Zlatanova,Jonathan Li,2008-01-24 Disaster management is generally understood to consist of four phases: mitigation, preparedness, response and recovery. While these phases are all important and interrelated, response and recovery are often considered to be the most critical in terms of saving lives. Working together or pulling apart? Lupton, Carol, North, Nancy, 2001-09-26 In the context of the 'cross-cutting' policy ambitions of the current Labour government, *Working together or pulling apart?* examines the contribution of the NHS to the multi-agency and inter-professional child protection process. Applying the insights of policy network and inter-organisational analysis, the text: provides detailed information on the current role played by a range of health professionals within child protection; investigates the nature and operation of the central policy community and local provider networks; considers the tensions arising from differences of professional power and knowledge, organisational cultures and agendas, and governance and regulation; examines the impact of wider socio-political changes on the operation of the child protection process, at both central and local levels. *Working together or pulling apart?* will be essential reading for all those working in child protection, at both strategic and frontline levels, within the NHS and other agencies. In addition, it will be of interest to staff and students on undergraduate or postgraduate courses in health, social work, public and social policy.

GPS Mapping Rich Owings, 2005 A comprehensive guide to mapping software explains how to interface one's GPS receiver with a computer to create maps, annotate aerial photos, and create 3-D maps. Also includes where to find free software and maps, how to use aerial photos and satellite imagery, and how to view favorite backcountry locations in 3-D.

The Kerr/Haslam Inquiry [report] Kerr/Haslam Inquiry, 2005-07-18 This report sets out the findings and recommendations of the private inquiry into how the NHS dealt with complaints relating to the practice and conduct of two consultant psychiatrists, William Kerr and Michael Haslam, who worked in the same psychiatric hospital in North Yorkshire during the 1970s and 1980s, and who were both later convicted of the indecent assault of female psychiatric patients. The two-volume report examines a range of issues including: i) background events including the range of concerns considered in the provision of mental health services, the conduct of the inquiry and the report in context; ii) detailed examination of the complaints against William Kerr and Michael Haslam, the NHS procedures then in place for raising concerns about healthcare professionals and actions taken in response to concerns; iii) the actions of particular GPs and the

response of the GP community at large; iv) contributing factors which acted as a barrier to appropriate investigation and action, including organisational and structural issues, the prevailing medical culture and lack of a governance process, problems of professional practice and individual failings; and v) changes since the 1990s and recommendations for improvements in future practice.
