Recent Trends in Renewable Energy Sources and Power Conversion R.

Seyezhai,S. Karuppuchamy,L. Ashok Kumar,2021-07-02 This book presents selected papers from the International Conference on Renewable Energy Systems (ICRES 2020). It throws light over the state of the art of renewable energy sources and their technological advances. Renewable energy sources discussed in this book include solar, wind, biomass, fuel cells, hydropower , hydrogen, nuclear, and geothermal. This book comprehensively explains each of these sources, materials associated, technological development, economics and their impact on the environment. As the renewable energy sources are intermittent, they require specific power electronic converter to convert the generated power into useful form that can be used for utility. Hence, this book describes different forms of power converter such as AC-DC, DC-DC, DC-AC and AC-AC. Advanced power semiconductor devices, their gate drive and protection circuits, heat sink design and magnetic components for power converter are the additional topics included in this book. The topics covered in these proceedings will have a large impact among academicians, researchers, policy makers, scientists, practitioners and students in fields of electronics and electrical engineering, energy engineering, automotive engineering, and so on.

Integrated Computer Technologies in Mechanical Engineering - 2021 Mykola Nechyporuk,Vladimir Pavlikov,Dmitriy Kritskiy,2022-02-21 The International Scientific and Technical Conference “Integrated Computer Technologies in Mechanical Engineering” – Synergetic Engineering (ICTM) was established by National Aerospace

University “Kharkiv Aviation Institute”. The Conference ICTM’2021 was held in Kharkiv, Ukraine, during October 28-29, 2021. During this conference, technical exchanges between the research community were carried out in the forms of keynote speeches, panel discussions, as well as special session. In addition, participants were treated to a series of receptions, which forge collaborations among fellow researchers. ICTM’2021 received 203 papers submissions from different countries. Target Groups ICTM was formed to bring together outstanding researchers and practitioners in the field of information technology in the design and manufacture of engines; creation of rocket space systems, aerospace engineering from all over the world to share their experience and expertise.

Project Independence Blueprint United States. Federal Energy Administration,1974

What is Project Independence? The sources and uses of energy in the United States have changed dramatically in the last several decades. As a result, in just one generation, we have shifted from a position of domestic energy abundance to a substantial and continually growing reliance on foreign energy sources. Project Independence is a wide-ranging program to evaluate this growing dependence on foreign sources of energy, and to develop positive programs to reduce our vulnerability to future oil cut-offs and price increases.

Food, Energy, and Water Nexus Chittaranjan Ray, Sekhar Muddu, Sudhirendar Sharma, 2022-01-17 In this book, major issues surrounding importance of water and energy for food security in the United States and India are described representing two extremes in yield, irrigation efficiency, and automation. The farming systems in these two countries face different risks in terms of climatic shifts and systems' resiliency to handle the shocks. One may have comparative advantage over the other, but both are susceptible. Innovations in irrigation for food and fuel production, improvements in nitrogen and water use efficiency, and rural sociological issues are discussed here. We also look into some of the unintended consequences of high productivity agriculture in terms of surface and ground water quality and impacts on ecosystem services. Finally, we present ways to move forward to meet the food demands in the next half-century in both countries. As the current world population of 7 billion is expected to reach or exceed 10 billion in the next 40 years, there will be significant additional demand for food. A rising middle class and its preference for a meat-based diet also increases the demand for animal feed. This additional food and feed production needs special considerations in water and energy management besides the development of appropriate crop hybrids to withstand future climatic shifts and other environmental factors. A resilient agricultural landscapes will also be needed to withstand climatic fluctuations, disease pressures, etc. While the upper and many middle income countries have made significant improvements in crop yield due to pressurized irrigation and automation in farming systems, the lower income countries are struggling with yield enhancements due to such limitations. The rise in population is expected to be more in Sub-Saharan Africa and Middle East (Low to middle-income

countries) where the crop yields are expected to be low.

Functionality and Application of Colored Cereals Sneh Punia,Manoj

Kumar,2022-11-25 Functionality and Application of Colored Cereals: Nutritional, Bioactive and Health Aspects focuses on exploiting the full and functional possibilities of these grains. From their physical chemistry to their health benefits, this book highlights cereals with potential for enhanced products. Plant-based food colorants play an important role in conferring colors to food to increase attractiveness for consumers, improve appetite, minimize synthetic colorants, and conform to food culture. Over the last decades, the presence of anthocyanin and other bioactive compounds in colored cereal grains (maize, rice, wheat, barley, sorghum, millet, and rye) have attracted the attention of various food processors and researchers. Colored cereals are imperative for food processing industries as high-value pigments present in the bran layer can easily be extracted and utilized as functional foods and natural colorants. The extracted pigments such as anthocyanin can replace synthetic dyes currently used in foods, drugs and cosmetics. Additionally, natural additives improve the nutritional value, appearance, texture, flavor and storage properties of food products. Reviews colored cereal grains morphology, composition and the diversity of the different uses of cereal grains Includes content on the functionality and therapeutic significance of functional components of colored cereal grains Contains global coverage of the latest research on the bioactive potential, food applications and health benefits of colored cereals
