The Christian Writer's Manual of Style Robert Hudson,2016-08-30 The standard style guide of the Christian publishing industry, *The Christian Writer's Manual of Style*, 4th Edition, compiled by veteran Zondervan editor Robert Hudson, contains clear guidance on style questions related to religious writing, including many topics not addressed in other references or online. Nearly half of this fourth revision is made up of new material, including information about turning blogs into books, the effects of digital media on writing, "adverbial doubles," "vanishing accents," word-choice strategies, endorser guidelines, and much more. It also contains an all-new "Word List" which makes up more than a third of the book. The most needful information remains—entries on capitalization, abbreviation, citations, fictional dialogue, and more—but it has all been updated to keep pace with changes in English language usage. This fourth edition also corresponds with *The Chicago Manual of Style*, 16th Edition (2010), though it isn't afraid to chart new territory

where that reference is unhelpful on issues of religious writing. Comprehensive yet easy-to-use, *The Christian Writer's Manual of Style*, 4th Edition, is a go-to resource for Christian authors, pastors, teachers, copy writers, editors, proofreaders, publishing and ministry professionals, executive assistants, and students—anyone who writes or edits as a part of their work or study—and for grammar aficionados everywhere.

Synthetic Data for Deep Learning Sergey I. Nikolenko, 2021-06-26 This is the first book on synthetic data for deep learning, and its breadth of coverage may render this book as the default reference on synthetic data for years to come. The book can also serve as an introduction to several other important subfields of machine learning that are seldom touched upon in other books. Machine learning as a discipline would not be possible without the inner workings of optimization at hand. The book includes the necessary sinews of optimization though the crux of the discussion centers on the increasingly popular tool for training deep learning models, namely synthetic

data. It is expected that the field of synthetic data will undergo exponential growth in the near future. This book serves as a comprehensive survey of the field. In the simplest case, synthetic data refers to computer-generated graphics used to train computer vision models. There are many more facets of synthetic data to consider. In the section on basic computer vision, the book discusses fundamental computer vision problems, both low-level (e.g., optical flow estimation) and high-level (e.g., object detection and semantic segmentation), synthetic environments and datasets for outdoor and urban scenes (autonomous driving), indoor scenes (indoor navigation), aerial navigation, and simulation environments for robotics. Additionally, it touches upon applications of synthetic data outside computer vision (in neural programming, bioinformatics, NLP, and more). It also surveys the work on improving synthetic data development and alternative ways to produce it such as GANs. The book introduces and reviews several different approaches to synthetic data in various domains of machine learning, most notably the following fields: domain adaptation for making synthetic data more realistic and/or adapting the models to be trained on synthetic data and differential privacy for generating synthetic data with privacy guarantees. This discussion is accompanied by an introduction into generative adversarial networks (GAN) and an introduction to differential privacy.

Translating the Social World for Law Elizabeth Mertz, William K. Ford, Gregory Matoesian, 2016-06-22

This volume examines the linguistic problems that arise in efforts to translate between law and the social sciences. We usually think of translation as pertaining to situations involving distinct languages such as English and Swahili. But realistically, we also know that there are many kinds of English or Swahili, so that some form of translation may still be needed even between two people who both speak English—including, for example, between English speakers who are members of different professions. Law and the social sciences certainly qualify as disciplines with quite distinctive language patterns and practices, as well as different orientations and goals. In coordinated papers that are grounded in empirical research, the volume contributors use careful linguistic analysis to understand how attempts to translate between different disciplines can misfire in systematic ways. Some contributors also point the way toward more fruitful translation practices. The contributors to this volume are members of an interdisciplinary working group on Legal Translation that met for a number of years. The group includes scholars from law, philosophy, anthropology, linguistics, political science, psychology, and religious studies. The members of this group approach interdisciplinary communication as a form of translation between distinct disciplinary languages (or, registers). Although it may seem obvious that professionals in different fields speak and think differently about the world, in fact experts in law and in social science too often assume that they can communicate easily when they are speaking what appears to be the same language. While such experts may intellectually understand that they differ regarding their fundamental assumptions and uses of language, they may nonetheless consistently underestimate the degree to which they are actually talking past one another. This problem

takes on real-life significance when one of the fields is law, where how knowledge is conveyed can affect how justice is meted out.

The Ethics of Virtual and Augmented Reality
Erick Jose Ramirez, 2021-12-29 This book offers new ways of thinking about and assessing the impact of virtual reality on its users. It argues that we must go beyond traditional psychological concepts of VR presence to better understand the many varieties of virtual experiences. The author provides compelling evidence that VR simulations are capable of producing virtually real experiences in people. He also provides a framework for understanding when and how simulations induce virtually real experiences. From these insights, the book shows that virtually real experiences are responsible for several unaddressed ethical issues in VR research and design. Experimental philosophers, moral psychologists, and institutional review boards must become sensitive to the ethical issues involved between designing realistic virtual dilemmas, for good data collection, and avoiding virtually real trauma. Ethicists and game designers must do more to ensure that their simulations don't inculcate harmful character traits. Virtually real experiences, the author claims, can make virtual relationships meaningful, productive, and conducive to welfare but they can also be used to systematically mislead and manipulate users about the nature of their experiences. *The Ethics of Virtual and Augmented Reality* will appeal to philosophers working in applied ethics, philosophy of technology, and aesthetics, as well as researchers and students interested in game studies and game design.

Proceedings of the 27th International Symposium on Advancement of Construction Management and Real Estate
Jing Li, Weisheng Lu, Yi Peng, Hongping Yuan, Daikun Wang, 2023-08-07 This book presents the

proceedings of CRIOCM 2022 (27th International Conference on Advancement of Construction Management and Real Estate), sharing the latest developments in real estate and construction management around the globe. The conference was organized by the Chinese Research Institute of Construction Management (CRIOCM) working in close collaboration with The Chinese University of Hong Kong. Written by international academics and professionals, the book discusses the latest achievements, research findings, and advances in frontier disciplines in the field of construction management and real estate. Covering a wide range of topics, including spatial planning and land use innovation, integration and application of BIM and GIS, low-carbon built environment, post-pandemic resilient cities development, housing and social governance, real estate market and urban policy, real estate finance and economics, intelligent construction and smart city, built environment for healthy living, and construction management in the post-COVID-19 era, the discussions provide valuable insights into the implementation of advanced construction project management and real estate market in China and abroad. The book offers an outstanding resource for academics and professionals
