Advances in Manufacturing Technology XXXII P. Thorvald, K. Case, 2018-08-29 The urgent need to keep pace with the accelerating globalization of manufacturing in the 21st century has produced rapid advancements in technology, research and innovation. This book presents the proceedings of the 16th International Conference on Manufacturing Research incorporating the 33rd National Conference on Manufacturing Research (ICMR 2018), held in Skövde, Sweden, in September 2018. The aim of the conference is to create a friendly and inclusive environment, bringing together researchers, academics and industrialists with practical and theoretical knowledge to share and discuss emerging trends and new challenges. The book is divided into 12 parts, covering areas such as the manufacturing process; robots; product design and development; smart manufacturing; and lean, among others. Covering both cutting-edge research and recent industrial applications, the book will appeal to all those with an interest in recent advances in manufacturing technology.

Internet of Things Based on Smart Objects Giancarlo Fortino, Paolo Trunfio, 2014-04-04 The Internet of Things (IoT) usually refers to a world-wide network of interconnected heterogeneous objects (sensors, actuators, smart devices, smart objects, RFID, embedded computers, etc) uniquely addressable, based on standard communication protocols. Beyond such a definition, it is emerging a new definition of IoT seen as a loosely coupled, decentralized system of cooperating smart objects (SOs). A SO is an autonomous, physical digital object augmented with sensing/actuating, processing, storing, and networking capabilities. SOs are able to sense/actuate, store, and interpret information created within themselves and around the neighbouring external world where they are situated, act on their own, cooperate with each other, and exchange information with other kinds of electronic devices and human users. However, such SO-oriented IoT raises many in-the-small and in-the-large issues involving SO programming, IoT system architecture/middleware and methods/methodologies for the development of SO-based applications. This Book will specifically focus on exploring recent advances in architectures, algorithms, and applications for an Internet of Things based on Smart Objects. Topics appropriate for this Book include, but are not necessarily limited to: - Methods for SO development - IoT Networking - Middleware for SOs - Data Management for SOs - Service-oriented SOs - Agent-oriented SOs - Applications of SOs in Smart Environments: Smart Cities, Smart Health, Smart Buildings, etc. Advanced IoT Projects.

The First Green Wave Ryan O'Connor,2015-10-15 The First Green Wave traces the rise of Ontario's environmental movement. At the heart of the story is Pollution Probe, an organization founded in 1969 by students and faculty at the University of Toronto. In its first year of operation, Pollution Probe confronted Toronto's City Hall over its use of pesticides, Ontario Hydro over air pollution, and the detergent industry over pollution of the Great Lakes. The success of these actions inspired the founding of other environmental organizations across Canada and led to the development of initiatives now taken for granted, such as waste reduction and energy policy.

Introducing Ken Wilber Lew Howard,2005-05-17 Ken Wilbers revolutionary thinking is beginning to shift the orientation of Western culture. Wilber combines his knowledge as mystic, scientist, psychologist and philosopher to create comprehensive concepts for understanding our world and our place in it. This integral approach is much needed in a world torn by conflicts of religion, culture, and ideology. Lew Howard says, I wrote this book to make the work of Ken Wilber accessible to the average person. Wilbers integral understanding (which is an interlocking whole) is broken down into concepts that can be individually understood. These understandings result in an integral conception of the Kosmos. Wilbers insights revolutionized my spiritual practiceand can do the same for you.

Eat Like a Fish Bren Smith,2020-03-27 JAMES BEARD AWARD WINNER IACP Cookbook Award finalist In the face of apocalyptic climate change, a former fisherman shares a bold and hopeful new vision for saving the planet: farming the ocean. Here Bren Smith–pioneer of regenerative ocean agriculture–introduces the world to a groundbreaking solution to the global climate crisis. A genre-defining “climate memoir,” *Eat Like a Fish* interweaves Smith’s own life—from sailing the high seas aboard commercial fishing trawlers to developing new forms of ocean farming to surfing the frontiers of the food movement—with actionable food policy and practical advice on ocean farming. Written with the humor and swagger of a fisherman telling a late-night tale, it is a powerful story of environmental renewal, and a must-read guide to saving our oceans, feeding the world, and—by creating new jobs up and down the coasts—putting working class Americans back to work.

Multimedia and Sensory Input for Augmented, Mixed, and Virtual Reality Tyagi, Amit Kumar,2021-01-08 Augmented and virtual reality (AR and VR) offer exciting opportunities for human computer interaction (HCI), the enhancement of places, and new business cases. Though VR is most popular for video games, especially among younger generations, AR and VR can also be used in applications that include military, medical, navigational, tourism, marketing, and maintenance uses. Research in these technologies along with 3D user interfaces has gained momentum in recent years and has solidified it as a staple technology for the foreseeable future. Multimedia and Sensory Input for Augmented, Mixed, and Virtual Reality includes a collection of business case studies covering a variety of topics related to AR, VR, and mixed reality (MR) including their use in possible applications. This book also touches on the diverse uses of AR and VR in many industries and discusses their importance, challenges, and

opportunities. While discussing the use these technologies in sectors such as education, healthcare, and computer science, this book is ideal for computer scientists, engineers, practitioners, stakeholders, researchers, academicians, and students who are interested in the latest research on augmented, mixed, and virtual reality.

Energy and Environment Michel André,Zissis Samaras,2016-06-15 Transport systems are facing an impossible dilemma: satisfy an increasing demand for mobility of people and goods, while decreasing their fossil-energy requirements and preserving the environment. Additionally, transport has an opportunity to evolve in a changing world, with new services, technologies but also new requirements (fast delivery, reliability, improved accessibility). In this book, recent research works are reported around the triptych: “transport, energy and environment”, which demonstrates that vehicle technologies and fuels can still improve, but it is necessary to prepare their implementation (e.g. electro-mobility), to think of new services, and to involve all actors, particularly enterprises, who will be the drivers of innovation. Mitigation strategies are studied to promote innovative, multimodal and clean transports and services. Research progress is reported on air pollution, vibrations and noise, their mitigation and assessment methodologies.
