Complex, Intelligent and Software Intensive Systems Leonard Barolli,2023-06-18 This book aims to deliver a platform of scientific interaction between the three interwoven challenging areas of research and development of future ICT-enabled applications: software intensive systems, complex systems and intelligent systems. Software intensive systems are systems, which heavily interact with other systems, sensors, actuators, devices, other software systems and users. More and more domains are involved with software intensive systems, e.g., automotive, telecommunication systems, embedded systems in general, industrial automation systems and business applications. Moreover, the outcome of web services delivers a new platform for enabling software intensive

systems. Complex systems research is focused on the overall understanding of systems rather than its components. Complex systems are very much characterized by the changing environments in which they act by their multiple internal and external interactions. They evolve and adapt through internal and external dynamic interactions. The development of intelligent systems and agents, which is each time more characterized by the use of ontologies and their logical foundations, builds a fruitful impulse for both software intensive systems and complex systems. Recent research in the field of intelligent systems, robotics, neuroscience, artificial intelligence and cognitive sciences are very important factor for the future development and innovation of software intensive and complex systems.

Lite is Dangerous Henriette Chardak,2023-07-04 In 6,000 food products, aspartame is found everywhere in so-called diet nutrition. However, several scientific studies show

that this sweetener is harmful for children, pregnant women and epileptics. Used to replace sugar and reduce the caloric intake of food, aspartame actually works in the opposite direction, it develops obesity and diabetes. In this first in-depth investigation of the diet industry, Henriette Chardak exposes a health scandal. She shows why the use of aspartame continues despite the risks it generates. How people were pushed into consuming these chemical substances—whose harmlessness had been questioned for many years. Between Chicago and Tokyo, top-secret files and complacency of the authorities, the author offers us a breathless thriller, behind-the-scenes of the world chemical industry. The story begins in Chicago and ends up in our plates and our medicines. A real cold case, where readers will find the keys to a thriller that was played out in the 1970s. They will make up their minds about the usefulness—or danger—of this fake sugar. Two scoops: • super sweeteners from aspartame are given to cattle to make them grow fatter faster; • Japan, which manufactures aspartame, does not consume it. This book also lays bare what is was not meant to be told—the conflicts of interest, colossal stakes, secret files forbidden to the public. Henriette Chardak is a journalist and television producer. She studied criminology with Professor Jacques Léauté during her journalism studies, which led her to prefer long investigations to short news flashes. After working as a journalist and director for France 2, she devoted herself to biographies, to introduce the general public to unique and exemplary pioneers: Kepler, Brahe, Pythagoras, Rabelais, Cervantes, Reclus, Shakespeare.

Digital Libraries in Computer Science: The MeDoc Approach Andreas Barth, Michael Breu, Albert Endres, Arnoud de Kemp, 2006-07-28 This book coherently documents the

results and experiences of a major digital library pilot effort, the MeDoc project (Multimedia Electronic Documents). This two-year project was initiated by the German Informatics Society (GI) and involved authors, publishers, librarians, and computer science departments. The prototype distributed digital library system developed during the initiative was operated in a nationwide trial for several months. The book presents the technical and operational results achieved during the project as well as input from foreign digital library activities. Besides professionals active in the area of digital library research and design, this book addresses librarians and others engaged in scientific publishing.
