Forward-looking External Search as a Driver for Innovation Sara Polier, 2019-04-25 In this empirical analysis Sara Polier investigates forward-looking external search strategies and their impact on the value contribution of corporate foresight. Based on a mixed method approach combining a quantitative and qualitative analysis of large, R&D-intensive firms, the findings reveal a general positive influence of different search strategies with respect to the scope (i.e. breadth, depth, and distance) and direction of search (i.e. market, science, and intermediary-driven) on the role of foresight as a driver for innovation. This relationship is found to be mediated by a firm's exploratory learning capability, which appears to facilitate the effective transfer of external future-related knowledge into valuable outputs.

101 Damnations Ned Boulting, 2014-11-06 Join Ned Boulting as he reports on his dozen-th Tour de France, an event in which blokes do amazing things on bikes, and, we're oft told, the biggest annual sporting event in the world. 101 Damnations is a chance to relive the 2014 race, stage for stage, fall after fall, tantrum by tantrum; just the good bits mind, without all the aerial shots of castles. Or sunflowers. (Though it does wax lyrical about some stunning Alpine scenery . . . and, with the race starting in Yorkshire, even some stunning scenery not far from Bradford). From Leeds to Paris (how often do you say that?), Ned details the minutiae of his encounters with the likes of Vincenzo Nibali, David Millar, Chris Froome, Chris Boardman (or 'Broadman' as some would have it), Marcel Kittel, Mrs Cavendish (Mark's wife), Peter Sagan and the rest. Their endeavours, achievements, humour and occasional rancour, sit alongside his own decade-long quest for the ideal end-of-race T-shirt. Ned weaves together the interesting, amusing and unheralded threads of the race itself, and reflects on his own perennial struggle to get round, get on and get by. 101 Damnations encapsulates all that is incredible – and incredibly ordinary – about the greatest race on earth.

Cracks in the Pavement Martin Sanchez-Jankowski, 2008-09-02 Neighborhoods have been central to American sociology since its inception, yet we have understood little about how the institutions in urban communities evolve, disappear, or persist over time. Instead, as of late, many scholars have treated neighborhoods as collections of individuals and families, ignoring the institutional ecology. Understanding the dynamic role of local institutions is critical not only to sociological scholarship but also to important public policy debates about urban poverty. Martín Sánchez-Jankowski offers the reader an important, comprehensive look at how local institutions ranging from barbershops to street gangs to public housing both reflect and shape the culture and daily rhythms of the residents who live with them. His ecological perspective offers an important missing link in debates about 'neighborhood effects' and should be read by anyone interested in understanding urban poverty.—Dalton Conley, author of *Being Black, Living in the Red: Race, Wealth, and Social Policy in America* In his famous and moving preface to *Les Misérables*, Victor Hugo warns us that as long as there is poverty, such tales will be told. But stories are not often told about the resurgence of poor communities—their struggles to mobilize and change their condition. But this book does just that—filling in the rest of the picture; and not of individual Horatio Algiers, but with textured and critical analysis of the barriers these communities face and the pathways they take to achieve social change.—Troy Duster, New York University

How Biology Works DK,2023-06-27 Discover everything you need to know about biology, with the simplest most visual guide to the science of life. How do vaccines work? What is special about stem cells? How did we evolve from bacteria? The science of life can be dauntingly complex, and it can be hard to separate "good" science from "bad", fundamental truths from the much-hyped breakthroughs reported in the media. With clear, easy-to-understand graphics and packed with fascinating facts, *How Biology Works* demystifies both the core biology that may have eluded us at school, and the cutting-edge life science that makes the news, answering the questions that spark our curiosity. With power to every page, this striking science book: - Is illustrated entirely by specially commissioned, boldly-colored, distinctive, flat, vector graphics that explain each topic clearly and engagingly. - Uses clear, distinctive, eye-catching graphics to make even complex biology easy to understand. - Offers a practical, no-nonsense approach to each subject. Building from life's fundamental ingredients, such as carbon and water, the book explains chemical processes in living cells, controlled by the ultimate biochemical, DNA. It shows how DNA is made of units called genes, which are shuffled in each generation of offspring, leading to variation and evolution. It covers topics from school biology, such as how plants work and how animals, including humans, work, and goes on to ecology and biotechnology. Beyond school science, however, it covers the background to the latest medical technology and biotechnology: how gene therapy works, what stem-cell research is achieving, and how our immune systems, boosted by vaccines, are in an arms race with ever-mutating viruses and other pathogens. At DK, we believe in the power of discovery. So why stop there? *How Biology Works* is part of DK's widely successful *How Stuff Works* series. Discover the inner workings of the mind with *How the Brain Works*, succeed in all things science with *How Science Works* and discover the cosmos like you've never known before with *How Space Works*. Whatever topic sparks your interests, there's a plethora of knowledge to discover!

Biology Run Amok! Mark C. Glassy,2018-04-23 Science fiction movie audiences may sometimes wonder how fictitious the science in a film really is. Yet for many--call them the Jurassic Park generation--film and popular media can present a seemingly plausible melding of science and fiction that forms a distorted understanding of scientific facts and concepts. Recognizing that film is both the dominant entertainment medium and an effective tool for teaching, this book--featuring articles originally published in the magazine *Scary Monsters*--separates biological reality from fantasy in dozens of science fiction films, including *The Island of Lost Souls* (1933), *The Incredible Shrinking Man* (1957), *War of the Worlds* (1953), *A Clockwork Orange* (1971), *Scanners* (1980), *The Serpent and the Rainbow* (1987) and *Outbreak* (1995).
