Digital Forensics and Cyber Crime Pavel Gladyshev, Marcus K. Rogers, 2012-11-28 This book contains a selection of thoroughly refereed and revised papers from the Third International ICST Conference on Digital Forensics and Cyber Crime, ICDF2C 2011, held October 26-28 in Dublin, Ireland. The field of digital forensics is becoming increasingly important for law enforcement, network security, and information assurance. It is a multidisciplinary area that encompasses a number of fields, including law, computer science, finance, networking, data mining, and criminal justice. The 24 papers in this volume cover a variety of topics ranging from tactics of cyber crime investigations to digital forensic education, network forensics, and the use of formal methods in digital investigations. There is a large section addressing forensics of mobile digital devices.

**The Book Thieves** Anders Rydell, 2018-02-06 A chilling reminder of Hitler's twisted power. —BBC For readers of *The Monuments Men* and *The Hare with Amber Eyes*, the story of the Nazis' systematic pillaging of Europe's libraries, and the small team of heroic librarians now working to return the stolen

books to their rightful owners. While the Nazi party was being condemned by much of the world for burning books, they were already hard at work perpetrating an even greater literary crime. Through extensive new research that included records saved by the Monuments Men themselves—Anders Rydell tells the untold story of Nazi book theft, as he himself joins the effort to return the stolen books. When the Nazi soldiers ransacked Europe's libraries and bookshops, large and small, the books they stole were not burned. Instead, the Nazis began to compile a library of their own that they could use to wage an intellectual war on literature and history. In this secret war, the libraries of Jews, Communists, Liberal politicians, LGBT activists, Catholics, Freemasons, and many other opposition groups were appropriated for Nazi research, and used as an intellectual weapon against their owners. But when the war was over, most of the books were never returned. Instead many found their way into the public library system, where they remain to this day. Now, Rydell finds himself entrusted with one of these stolen volumes, setting out to return it to its rightful owner. It was passed to him by the small team of heroic librarians who have begun the monumental task of combing through Berlin's public libraries to

identify the looted books and reunite them with the families of their original owners. For those who lost relatives in the Holocaust, these books are often the only remaining possession of their relatives they have ever held. And as Rydell travels to return the volume he was given, he shows just how much a single book can mean to those who own it.

**Scientific Computing with Multicore and Accelerators** Jakub Kurzak, David A. Bader, Jack Dongarra, 2010-12-07 The hybrid/heterogeneous nature of future microprocessors and large high-performance computing systems will result in a reliance on two major types of components: multicore/manycore central processing units and special purpose hardware/massively parallel accelerators. While these technologies have numerous benefits, they also pose substantial performance challenges for developers, including scalability, software tuning, and programming issues. Researchers at the Forefront Reveal Results from Their Own State-of-the-Art Work Edited by some of the top researchers in the field and with contributions from a variety of international experts, **Scientific Computing with Multicore and Accelerators** focuses on the architectural design and implementation of

multicore and manycore processors and accelerators, including graphics processing units (GPUs) and the Sony Toshiba IBM (STI) Cell Broadband Engine (BE) currently used in the Sony PlayStation 3. The book explains how numerical libraries, such as LAPACK, help solve computational science problems; explores the emerging area of hardware-oriented numerics; and presents the design of a fast Fourier transform (FFT) and a parallel list ranking algorithm for the Cell BE. It covers stencil computations, auto-tuning, optimizations of a computational kernel, sequence alignment and homology, and pairwise computations. The book also evaluates the portability of drug design applications to the Cell BE and illustrates how to successfully exploit the computational capabilities of GPUs for scientific applications. It concludes with chapters on dataflow frameworks, the Charm++ programming model, scan algorithms, and a portable intracore communication framework. Explores the New Computational Landscape of Hybrid Processors By offering insight into the process of constructing and effectively using the technology, this volume provides a thorough and practical introduction to the area of hybrid computing. It discusses introductory concepts and simple examples of parallel computing, logical and

performance debugging for parallel computing, and advanced topics and issues related to the use and building of many applications.

*The Spirit of Russia* Tomáš Garrigue Masaryk, 1967

**Expanded Cinema** Gene Youngblood, 2020-03-03 Fiftieth anniversary reissue of the founding media studies book that helped establish media art as a cultural category. First published in 1970, Gene Youngblood's influential *Expanded Cinema* was the first serious treatment of video, computers, and holography as cinematic technologies. Long considered the bible for media artists, Youngblood's insider account of 1960s counterculture and the birth of cybernetics remains a mainstay reference in today's hypermediated digital world. This fiftieth anniversary edition includes a new Introduction by the author that offers conceptual tools for understanding the sociocultural and sociopolitical realities of our present world. A unique eyewitness account of burgeoning experimental film and the birth of video art in the late 1960s, this far-ranging study traces the evolution of cinematic language to the end of fiction, drama, and realism. Vast in scope, its prescient formulations include "the paleocybernetic age,"

“intermedia,” the “artist as design scientist,” the “artist as ecologist,” “synaesthetics and kinesthetics,” and “the technosphere: man/machine symbiosis.” Outstanding works are analyzed in detail. Methods of production are meticulously described, including interviews with artists and technologists of the period, such as Nam June Paik, Jordan Belson, Andy Warhol, Stan Brakhage, Carolee Schneemann, Stan VanDerBeek, Les Levine, and Frank Gillette. An inspiring Introduction by the celebrated polymath and designer R. Buckminster Fuller—a perfectly cut gem of countercultural thinking in itself—places Youngblood’s radical observations in comprehensive perspective. Providing an unparalleled historical documentation, Expanded Cinema clarifies a chapter of countercultural history that is still not fully represented in the arthistorical record half a century later. The book will also inspire the current generation of artists working in ever-newer expansions of the cinematic environment and will prove invaluable to all who are concerned with the technologies that are reshaping the nature of human communication.

*Multiple Attribute Decision Making* Gwo-Hshiung Tzeng, Jih-Jeng Huang, 2011-06-22 Decision makers are often faced with several conflicting alternatives. How do they evaluate trade-offs when there are more than three criteria? To help people make optimal decisions, scholars in the discipline of multiple criteria decision making (MCDM) continue to develop new methods for structuring preferences and determining the correct relative weights for criteria. A compilation of modern decision-making techniques, *Multiple Attribute Decision Making: Methods and Applications* focuses on the fuzzy set approach to multiple attribute decision making (MADM). Drawing on their experience, the authors bring together current methods and real-life applications of MADM techniques for decision analysis. They also propose a novel hybrid MADM model that combines DEMATEL and analytic network process (ANP) with VIKOR procedures. The first part of the book focuses on the theory of each method and includes examples that can be calculated without a computer, providing a complete understanding of

the procedures. Methods include the analytic hierarchy process (AHP), ANP, simple additive weighting method, ELECTRE, PROMETHEE, the gray relational model, fuzzy integral technique, rough sets, and the structural model. Integrating theory and practice, the second part of the book illustrates how methods can be used to solve real-world MADM problems. Applications covered in the book include: AHP to select planning and design services for a construction project TOPSIS and VIKOR to evaluate the best alternative-fuel vehicles for urban areas ELECTRE to solve network design problems in urban transportation planning PROMETEE to set priorities for the development of new energy systems, from solar thermal to hydrogen energy Fuzzy integrals to evaluate enterprise intranet web sites Rough sets to make decisions in insurance marketing Helping readers understand how to apply MADM techniques to their decision making, this book is suitable for undergraduate and graduate students as well as practitioners.

Public and Situated Displays K. O'Hara, M. Perry, E. Churchill, D. Russell, 2013-03-09 Public and situated display technologies can have an important impact on individual and social behaviour and

present us with particular interesting new design considerations and challenges. While there is a growing body of research exploring these design considerations and social impact this work remains somewhat disparate, making it difficult to assimilate in a coherent manner. This book brings together the perspectives of key researchers in the area of public and situated display technology. The chapters detail research representing the social, technical and interactional aspects of public and situated display technologies. The underlying concern common to these chapters is how these displays can be best designed for collaboration, coordination, community building and mobility. Presenting them together allows the reader to examine everyday display activities within the context of emerging technological possibilities.

*Warhol-isms* Andy Warhol, 2022-05-10 A unique collection of brilliant quotations from the legendary Pop artist One of the most influential artists of his time and ours, Andy Warhol is nearly as renowned for what he said as for what he did. Indeed, he is so quotable that things he never said are endlessly and plausibly attributed to him, including, fittingly, the most celebrated fake Warhol saying—“In the

future, everyone will be world-famous for 15 minutes.” Warhol-isms separates legend from fact to present a unique and comprehensive collection of authentic quotations from the Pop artist. Gathered from interviews and other primary sources, these deadpan, droll, ironic, and sincere gems—in which a superficial embrace of superficiality often disguises provocative, unconventional ideas—provide compelling insights into the life and work of an artist who has left an indelible mark on art and popular culture. Select quotations from the book: I think an artist is anybody who does something well. I went to [a psychiatrist] once, and he never called me back. They always say that time changes things, but you actually have to change them yourself. I’ve never met a person I couldn’t call a beauty. New things are always better than old things. I’m still a commercial artist. I was always a commercial artist.

100 Words To Make You Sound Smart American Heritage Dictionaries, 2006-10-04 Find the right words to make a point, seal the deal, or just keep folks listening! Chosen by the editors of the American Heritage Dictionaries, these words can help anyone who wants to be a more compelling communicator—as a worker, consumer, advocate, friend, dinner companion, or even romantic prospect.

The book includes a colorful variety of words, including handy words of just one syllable (such as glib) and words derived from the names of famous people (such as Freudian slip and Machiavellian). There are expressions from popular culture (Catch-22) and words that date back to classical civilization (spartan and stoic). Each word is clearly defined and shown in context with quotations from magazines, newspapers, broadcast media, movies, and television. For many words, quotations from distinguished authors and speakers are also given and word histories are explained. 100 Words to Make You Sound Smart provides an enjoyable way to communicate more effectively, distinctively, and articulately.

Father's Day Murder Leslie Meier, 2013-03-05 A small-town reporter hunts a big-city killer in a novel by a New York Times-bestselling author who provides “a truly American version of the English cozy” (Tulsa World). When her part-time reporting gig gives Lucy the opportunity to attend a Boston newspaper conference, she looks forward to a vacation from domestic bliss. But upon leaving Tinker’s Cove, Maine, she quickly discovers that alone time can be kind of...lonely. And in between libel workshops and panel discussions, Lucy takes a guilt trip. She feels terrible that she won’t be home to help her husband celebrate Father’s Day. But when Luther Read—head of a nearly bankrupt newspaper dynasty—suddenly drops dead, Lucy has other things to think about. She’s not buying the theory that Luther died of an asthma attack. The man just had too many enemies. Always the intrepid snoop, Lucy vows to investigate. But she can’t help wondering if her name will end up on a byline—or in an obit... “Reading a new Leslie Meier mystery is like catching up with a dear old friend.”—Kate

Carlisle, New York Times bestselling author of the Bibliophile Mysteries “Leslie Meier writes with sparkle and warmth.”—Chicago Sun-Times “I like Lucy Stone a lot, and so will readers.”—Carolyn Hart, New York Times-bestselling author of the Bailey Ruth Mysteries

**Media Worlds in the Postjournalism Era** David Altheide, 2019-01-08 The concept of media logic, a theoretical framework for explaining the relationship between mass media and culture, was first introduced in Altheide and Snow's influential work, *Media Logic*. In *Media Worlds in the Postjournalism Era*, the authors expand their analysis of how organizational considerations promote a distinctive media logic, which in turn is conducive to a media culture. They trace the ethnography of that media culture, including the knowledge, techniques, and assumptions that encourage media professionals to acquire particular cognitive and evaluative criteria and thereby present events primarily for the media's own ends.

**Media Power** David L. Altheide, 1985-02 Altheide deals with a very simple paradox: in the past,

people communicated in order to get something done; now they must first do something in order to communicate. The role of the mass media in establishing, shaping, and maintaining basic communication formats is the main focus of his book. He looks at how mass-mediated versions of events differ from those experienced first-hand, and at what would happen if everyone had unlimited access to television broadcasting facilities. Using specific examples and case studies of current events, Altheide examines the impact and implications of the mass media on a range of phenomena from international relations down to self-concept. `(This book) is an important complement to that whol

The Disappearing Computer Norbert Streitz,Achilles Kameas,Irene Mavrommati,2007-07-20 This book examines how the computer, as we currently know it, will be replaced by a new generation of technologies, moving computing off the desktop and ultimately integrating it with real world objects and everyday environments. It provides a unique combination of concepts, methods and prototypes of ubiquitous and pervasive computing reflecting the current interest in smart environments and ambient intelligence.

**Dance of the Photons** Anton Zeilinger, 2010-10-12 Einstein's steadfast refusal to accept certain aspects of quantum theory was rooted in his insistence that physics has to be about reality. Accordingly, he once derided as spooky action at a distance the notion that two elementary particles far removed from each other could nonetheless influence each other's properties—a hypothetical phenomenon his fellow theorist Erwin Schrödinger termed quantum entanglement. In a series of ingenious experiments conducted in various locations—from a dank sewage tunnel under the Danube River to the balmy air between a pair of mountain peaks in the Canary Islands—the author and his colleagues have demonstrated the reality of such entanglement using photons, or light quanta, created by laser beams. In principle the lessons learned may be applicable in other areas, including the eventual development of quantum computers.

**Peripheral Interaction** Saskia Bakker, Doris Hausen, Ted Selker, 2016-03-29 Computing devices

have become ever more present in our everyday environments, however embedding these technologies into our routines has remained a challenge. This book explores the novel theory of peripheral interaction to rectify this. This theory examines how interactive systems can be developed in such a way to allow people to seamlessly interact with their computer devices, but only focus on them at relevant times, building on the way in which people effortlessly divide their attention over several everyday activities in day to day life. Capturing the current state of the art within the field, this book explores the history and foundational theories of peripheral interaction, discusses novel interactive styles suitable for peripheral interaction, addresses different application domains which can benefit from peripheral interaction and presents visions of how these developments can have a positive impact on our future lives. As such, this book's aim is to contribute to research and practice in fields such as human-computer interaction, ubiquitous computing and Internet of Things, a view on how interactive technology could be redesigned to form a meaningful, yet unobtrusive part of people's everyday lives. Peripheral Interaction will be highly beneficial to researchers and designers alike in areas such as HCI,

Ergonomics and Interaction Design.
