How to Hunt Deer Like a Pro John Phillips, 2017-10-11 How do you know if the land you hunt has a trophy deer on it? Wildlife manager Bob Zaiglin, of Uvalde, Texas and Jim Crumley, the father of modern-day hunting camouflage, tell you how to find out. GPS can make finding and taking that trophy buck easier. This hunting guide will teach you how to hunt big bucks where no one else can find them, how to call deer, and how to become versatile as a deer hunter, so that if one deer tactic doesn't work, another one will. Dr. Keith Causey, retired professor of Wildlife Science at Auburn University, says, Deer of both sexes and all ages leave a wide variety and a large amount of information for other deer in their geological locations at scrapes. Although most people believe that dominant bucks in an area utilize these signposting regions, other deer use these signposts too for information. In the chapter, How to find Bucks at Scrape, Causey describes the best way to hunt a scrape. Brad Harrison of Neosho, Missouri, is a nationally-known videographer, professional deer hunter and master at calling deer. Another master is Will Primos of Primos Game Calls. These two experts will tell the best deer calls and when to use them in this book. One question that's mystified deer hunters for many years, is how to know when bucks move. And for over 20 years, Bo Pitman, lodge manager of White Oak Plantation, has been studying deer movement patterns. He explains what types of conditions are best for predicting deer movement. How do you hunt deer in the snow? Norm LeBrun, of Quebec, Canada, a guide at Anticosti Island, hunts deer in the snow almost all year long and provides timely insights on how and where to take big bucks under these conditions. Eddie Salter lives in Alabama and Mark Drury in Missouri, and these two master deer hunters give

you hunting tips for when the weather is hot and for hunting in swamps. Dr. Robert Sheppard tells you about some tricks that bucks play on whitetail deer hunters. There are also two chapters on how to hunt bucks at the end of deer season and a chapter on how to train bucks to come to you, so you don't have to go find them. For 50 years, I've been studying and hunting with some of the best whitetail hunters from around the country and in Canada, and this book is the combined knowledge of these time-tested, deer-hunting professionals. If you want to learn how to be a hunter, you need to have this book.

In addition, there is a unique reference chapter of all potential conditions a deer may suffer from, with full descriptions and images, and advice on suitability for entering the food chain. Noninvasive Survey Methods for Carnivores Robert A. Long, Paula MacKay, Justina Ray, William Zielinski, 2012-09-26 The status of many carnivore populations is of growing concern to scientists and conservationists, making the need for data pertaining to carnivore distribution, abundance, and habitat use ever more pressing. Recent developments in “noninvasive” research techniques—those that minimize disturbance to the animal being studied—have resulted in a greatly expanded toolbox for the wildlife practitioner. Presented in a straightforward and readable style, *Noninvasive Survey Methods for Carnivores* is a comprehensive guide for wildlife researchers who seek to conduct carnivore surveys using the most up-to-date scientific approaches. Twenty-five experts from throughout North America discuss strategies for implementing surveys across a broad range of habitats, providing input on survey design, sample collection, DNA and endocrine analyses, and data analysis. Photographs from the field, line drawings, and detailed case studies further illustrate on-the-ground application of the survey methods discussed. Coupled with cutting-edge laboratory and statistical techniques, which are also described in the book, noninvasive survey methods are efficient and effective tools for sampling carnivore populations. *Noninvasive Survey Methods for Carnivores* allows practitioners to carefully evaluate a diversity of detection methods and to develop protocols specific to their survey objectives, study area, and species of interest. It is an essential resource for anyone interested in the study of carnivores, from scientists engaged in primary research to agencies or organizations requiring carnivore detection data to develop management or conservation plans.
