Proceedings of the Future Technologies Conference (FTC) 2022, Volume 2 Kohei Arai,2022-10-12 The seventh Future Technologies Conference 2022 was organized in a hybrid mode. It received a total of 511 submissions from learned scholars, academicians, engineers, scientists and students across many countries. The papers included the wide arena of studies like Computing, Artificial Intelligence, Machine Vision, Ambient Intelligence and Security and their jaw- breaking application to the real world. After a double-blind peer review process 177 submissions have been selected to be included in these proceedings. One of the prominent contributions of this conference is the confluence of distinguished researchers who not only enthralled us by their priceless studies but also paved way for future area of research. The papers provide amicable solutions to many vexing problems across diverse fields. They also are a window to the future world which is completely governed by technology and its multiple applications. We hope that the readers find this volume interesting and inspiring and render their enthusiastic support towards it.

Design and Implementation of Real-Time Multi-Sensor Vision Systems Vladan Popovic,Kerem Seyid,Ömer Cogal,Abdulkadir Akin,Yusuf Leblebici,2017-07-03 This book discusses the design of multi-camera systems and their application to fields such as the virtual reality, gaming, film industry, medicine, automotive industry, drones, etc. The authors cover the basics of image formation, algorithms for stitching a panoramic image from multiple cameras, and multiple real-time hardware system architectures, in order to have panoramic videos. Several specific applications of multi-camera systems are presented, such as depth estimation, high dynamic range imaging, and medical imaging.

Crafting Feminism from Literary Modernism to the Multimedia Present Amy E. Elkins,2022-10 Crafting Feminism develops a dynamic study of craft and art-making in modern and contemporary feminist writing. In evocative readings of literary works from Virginia Woolf to Zadie Smith, this book expands our sense of transartistic modernist scholarship to encompass process-oriented and medium-specific analyses of textile arts, digital design, collage, photography, painting, and sculpture in literary culture. By integrating these craft practices into the book's enlightening archive, Elkins's theoretical argument extends a reading of craft metaphors into the material present. Crafting Feminism demonstrates how writers have engaged with handiwork across generations and have undertaken the crafting of a new modernity, one that is queer and feminist-threaded, messy, shattered, cut-up, pasted together, preserved, repaired, reflected, and spun out. An avant-garde work of scholarship, this book interweaves queer research methods and interdisciplinary rigor with a series of surprising archival discoveries. Making visible the collaborative, creative features of craft, Elkins captivates readers with generous illustrations and a series of *Techne* interchapters-interludes between longer chapters, which powerfully convey the symbiosis between feminist theory and method, and detail the network of archival influences that underpin this volume's hybrid approach. Foregrounding the work of decentering patriarchal and Eurocentric legacies of artistic authority, Elkins champions the diverse, intergenerational history of craft as a way to reposition intersectional makers at the heart of literary culture. An original and compelling study, *Crafting Feminism* breaks new ground in modernist and visual studies, digital humanities, and feminist, queer, and critical race theory.

Guidebook for Systems Applications in Astrobiology Vera M. Kolb,2023-12-20 This book addresses the timely subject of systems applications in astrobiology. It demonstrates how astrobiology – a multidisciplinary, interdisciplinary, and transdisciplinary field of science – can benefit from adopting the systems approach. Astrobiology draws upon its founding sciences, such as astronomy, physics, chemistry, biochemistry, geology, and planetary sciences. However, astrobiologists can encounter difficulties working across these fields. The systems approach, we believe, is the best contemporary approach to consider astrobiology holistically. The approach is currently used in other fields, such as engineering, which uses systems analysis routinely. Such an approach needs to be learned, both in principle and through examples, from the field. This book features chapters from experts across the field of astrobiology who have applied the systems approach. It will be a valuable guide for astrobiology students at the advanced undergraduate and graduate levels, in addition to researchers in the field, both in academia and the space industry. Key Features: Offers a unique and novel approach to studying and understanding astrobiology Encourages astrobiologists to apply a holistic systems approach to their work, rather than being bogged down in details Imparts practical knowledge to readers which can be adopted in different research and job opportunities in the field of astrobiology Vera M. Kolb obtained degrees in chemical engineering and organic chemistry from Belgrade University, Serbia, and earned her PhD in organic chemistry from Southern Illinois University, Carbondale, Illinois, United States. Following a 30-year career, she is Professor Emerita of Chemistry at the University of Wisconsin-Parkside, Kenosha, Wisconsin. During her first sabbatical leave with the NASA Specialized Center of Research and Training (NSCORT) in Astrobiology, she conducted research with Dr. Leslie Orgel at the Salk Institute and Prof. Stanley Miller at UC San Diego. Her second sabbatical was with Prof. Joseph Lambert at Northwestern University, where she studied sugar silicates and their potential astrobiological relevance. She is credited for authoring over 160 publications, in the fields of organic and medicinal chemistry, green chemistry, and astrobiology, including several books. Recently, she authored *Green*

Organic Chemistry and Its Interdisciplinary Applications (CRC 2016). In the astrobiology field, she edited *Astrobiology: An Evolutionary Approach* (CRC 2015) and *Handbook of Astrobiology* (CRC 2019). She co-authored (with Benton C. Clark) *Astrobiology for a General Reader: A Questions and Answers Approach* (CSP 2020) and *Systems Approach to Astrobiology* (CRC 2023).

MediaSync Mario Montagud,Pablo Cesar,Fernando Boronat,Jack Jansen,2018-03-26 This book provides an approachable overview of the most recent advances in the fascinating field of media synchronization (mediasync), gathering contributions from the most representative and influential experts. Understanding the challenges of this field in the current multi-sensory, multi-device, and multi-protocol world is not an easy task. The book revisits the foundations of mediasync, including theoretical frameworks and models, highlights ongoing research efforts, like hybrid broadband broadcast (HBB) delivery and users' perception modeling (i.e., Quality of Experience or QoE), and paves the way for the future (e.g., towards the deployment of multi-sensory and ultra-realistic experiences). Although many advances around mediasync have been devised and deployed, this area of research is getting renewed attention to overcome remaining challenges in the next-generation (heterogeneous and ubiquitous) media ecosystem. Given the significant advances in this research area, its current relevance and the multiple disciplines it involves, the availability of a reference book on mediasync becomes necessary. This book fills the gap in this context. In particular, it addresses key aspects and reviews the most relevant contributions within the mediasync research space, from different perspectives. *Mediasync: Handbook on Multimedia Synchronization* is the perfect companion for scholars and practitioners that want to acquire strong knowledge about this research area, and also approach the challenges behind ensuring the best mediated experiences, by providing the adequate synchronization between the media elements that constitute these experiences.

Virtual and Remote Control Tower Norbert Fürstenau,2022-07-01 This book presents the interdisciplinary and international “Virtual and Remote Tower” research and development work. It has been carried out since nearly twenty years with the goal of replacing the conventional aerodrome control tower by a new “Remote Tower Operation” (RTO) work environment for enhancing work efficiency and safety and reducing cost. The revolutionary human–system interface replaces the out-of-windows view by an augmented vision video panorama that allows for remote aerodrome traffic control without a physical tower building. It enables the establishment of a (multiple) remote control center (MRTO, RTC) that may serve several airports from a central location. The first (2016) edition of this book covered all aspects from preconditions over basic research and prototype development to initial validation experiments with field testing. Co-edited and -authored by DLR RTO-team members Dr. Anne Papenfuss and Jörn Jakobi, this second extended edition with nearly doubled number of chapters includes further important aspects of the international follow-up work towards the RTO-deployment. Focus of the extension with new contributions from ENRI/Japan and IAA/Dublin with Cranfield University, is on MRTO, workload, implementation, and standardization. Specifically, the two revised and nine new Chapters put the focus on inclusion of augmented vision and virtual reality technologies, human-in-the-loop simulation for quantifying workload and deriving minimum (technical) requirements according to standards of the European Organization for Civil Aviation Equipment (EUROCAE), and MRTO implementation and certification. Basics of optical / video design, workload measures, and advanced psychophysical data analysis are presented in four appendices.

Photographer's Guide to the Sony RX1R II Alexander S. White,2016-02-27 This book is a complete guide to using the Sony Cyber-shot DSC-RX1R II camera. With this book, author Alexander White provides users of the RX1R II with a manual covering all aspects of the camera’s operation. Using a tutorial-like approach, the book shows beginning and intermediate photographers how to accomplish things with this premium full-frame camera, and explains when and why to use the camera’s many features. The book provides details about the camera’s shooting modes as well as its menu options for shooting, playback, setup, and special effects. The book covers all of the features of the RX1R II, including its variable low pass filter, fast autofocus system, HD video recording, and features for continuous shooting. The book includes more than 450 color photographs that illustrate the camera’s controls, display screens, and menus. The images provide examples of photographs taken using the RX1R II’s Scene mode, with settings optimized for subjects such as landscapes, sunsets, portraits, and action shots; and the Creative Style and Picture Effect menu options, with settings for altering the appearance of images. The book also provides introductions to topics such as street photography, astrophotography, and digiscoping. It includes a full discussion of the video features of the RX1R II, which can shoot HD movies with manual control of exposure and focus during movie recording. In three appendices, the book discusses accessories for the RX1R II, including cases, power sources, remote controls, and external flash units, and includes a list of websites and other resources for further information. The book includes an appendix with “quick tips” on how to take advantage of the camera’s features in the most efficient ways possible. This guide to the RX1R II includes a detailed index, so the reader can quickly find needed information about any particular feature or aspect of the camera.
