What Your Doctor Won't Tell You David Sherer, 2021-03-16

THIS BOOK WILL SAVE YOUR LIFE! — NEWSMAX In WHAT YOUR DOCTOR WON'T TELL YOU: The Real Reasons You Don't Feel Good and What YOU Can Do About It, Dr. Sherer provides readers with verifiable information about current medicine, healthcare and relevant public policy so they can make their own best judgments as to whether a change in their behavior will, if they are inclined, effect a positive change in your life. He strips away the veneer of political correctness when it comes to health and provides the basic truths behind the implications of the daily decisions we make that affect our health. These decisions, mostly based in how we approach food, physical activity, our mental and emotional states, our interactions with others and our approach to accessing healthcare, have profound effects on our physical, mental and emotional states. And with power, there is the potential for positive change. Bold enough to tell you what many medical professionals haven't the courage to say, Dr. David Sherer's book is chock-full of inside information on health, healthcare, related public policy, as well as the latest in prevention, diagnosis, and treatment of diseases from depression, diabetes, and heart disease to autoimmune disorders, neurological diseases, and asthma. Human-Machine Shared Contexts William

Lawless, Ranjeev Mittu, Donald Sofge, 2020-06-10 *Human-Machine Shared Contexts* considers the foundations, metrics, and applications of human-machine systems. Editors and authors debate whether machines, humans, and systems should speak only to each other, only to humans, or to both and how. The book establishes the meaning and operation of "shared contexts

between humans and machines; it also explores how human-machine systems affect targeted audiences (researchers, machines, robots, users) and society, as well as future ecosystems composed of humans and machines. This book explores how user interventions may improve the context for autonomous machines operating in unfamiliar environments or when experiencing unanticipated events; how autonomous machines can be taught to explain contexts by reasoning, inferences, or causality, and decisions to humans relying on intuition; and for mutual context, how these machines may interdependently affect human awareness, teams and society, and how these machines may be affected in turn. In short, can context be mutually constructed and shared between machines and humans? The editors are interested in whether shared context follows when machines begin to think, or, like humans, develop subjective states that allow them to monitor and report on their interpretations of reality, forcing scientists to rethink the general model of human social behavior. If dependence on machine learning continues or grows, the public will also be interested in what happens to context shared by users, teams of humans and machines, or society when these machines malfunction. As scientists and engineers think through this change in human terms, the ultimate goal is for AI to advance the performance of autonomous machines and teams of humans and machines for the betterment of society wherever these machines interact with humans or other machines. This book will be essential reading for professional, industrial, and military computer scientists and engineers; machine learning (ML) and artificial intelligence (AI) scientists and engineers, especially those engaged in research on autonomy, computational context, and human-machine shared contexts; advanced robotics scientists and engineers; scientists working with or interested in data issues for autonomous systems such as with the use of scarce data for training and operations with and without user interventions; social psychologists,

scientists and physical research scientists pursuing models of shared context; modelers of the internet of things (IOT); systems of systems scientists and engineers and economists; scientists and engineers working with agent-based models (ABMs); policy specialists concerned with the impact of AI and ML on society and civilization; network scientists and engineers; applied mathematicians (e.g., holon theory, information theory); computational linguists; and blockchain scientists and engineers. Discusses the foundations, metrics, and applications of human-machine systems Considers advances and challenges in the performance of autonomous machines and teams of humans Debates theoretical human-machine ecosystem models and what happens when machines malfunction

Deep Medicine Eric Topol, 2019-03-12 A Science Friday pick for book of the year, 2019 One of America's top doctors reveals how AI will empower physicians and revolutionize patient care Medicine has become inhuman, to disastrous effect. The doctor-patient relationship--the heart of medicine--is broken: doctors are too distracted and overwhelmed to truly connect with their patients, and medical errors and misdiagnoses abound. In *Deep Medicine*, leading physician Eric Topol reveals how artificial intelligence can help. AI has the potential to transform everything doctors do, from notetaking and medical scans to diagnosis and treatment, greatly cutting down the cost of medicine and reducing human mortality. By freeing physicians from the tasks that interfere with human connection, AI will create space for the real healing that takes place between a doctor who can listen and a patient who needs to be heard. Innovative, provocative, and hopeful, *Deep Medicine* shows us how the awesome power of AI can make medicine better, for all the humans involved.

Summary of Eric Topol's Deep Medicine Everest Media, 2022-06-10T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 I had my left knee replaced when I was 62 years old. The surgeon said

there was a 1 to 2 percent risk of infection, but I later learned that the pain from the surgery was beyond the reach of oxycodone. I became desperate for relief, and tried everything from acupuncture to electro-acupuncture to cold laser. #2 The book Arthrofibrosis, which my wife found, explained that arthrofibrosis is a complication that occurs in 2 to 3 percent of patients after a knee replacement. It is a vicious inflammation response to the joint that results in profound scarring. I was warned about the risk of infection, but not about the risk of arthrofibrosis. #3 AI is being used to help save lives already. My friend Dr. Stephen Kingsmore, a medical geneticist who heads up a pioneering program at the Rady Children's Hospital in San Diego, was awarded a Guinness World Record for taking a sample of blood to a fully sequenced and interpreted genome in only 19.5 hours. #4 The key to saving this boy's life was determining the root cause of his condition. Very experienced physicians might have eventually found the right course of treatment, but machines can do this work far quicker and better than people.

I'm Not Crazy... I'm Allergic Sherilyn Powers, 2015-07-16 I'm not crazy...I'm allergic After a lifetime of dealing with what she was told was depression, "Julie" found that her problem wasn't all mysterious and uncontrollable chemical reactions. Medically identified sensitivities and/or allergies to foods and environmental conditions seemed to have a strong correlation to the same emotional and mental states that she had experienced throughout the years as depression. These were sometimes accompanied by so-called typical allergy symptoms, but in some cases those medically-recognized symptoms were missing. In desperation she reached out to family member and author, Sherilyn Powers, who

had been exploring her own unusual reactions to foods and environment. Together they explored the connection between allergies and depression enabling Julie to take control of her life after fifty years of helplessness. This book is a journey of discovery and search for medical studies to help explain how every day things could be related to reactions like panic attacks, depression, uncontrollable crying, brain fog, body aches and pains and many more, when the popularly accepted allergic/sensitive reactions only include symptoms such as itchy eyes, a runny nose, and hives.
