Environment and Statecraft : The Strategy of Environmental Treaty-Making Scott

Barrett, 2003-01-09 Environmental problems like global climate change and stratospheric ozone depletion can only be remedied if states cooperate with one another. But sovereign states usually care only about their own interests. So states must somehow restructure the incentives to make cooperation pay. This is what treaties are meant to do. A few treaties, such as the Montreal Protocol on Substances that Deplete the Ozone Layer, succeed. Most, however, fail to alter the state behaviour appreciably. This book develops a theory that explains both the successes and the failures. In particular, the book explains when treaties are needed, why some work better than others, and how treaty design can be improved. The best treaties strategically manipulate the incentives states have to exploit the environment, and the theory developed in this book shows how treaties can do this. The theory integrates a number of disciplines, including economics, political science, international law, negotiation analysis, and game theory. It also offers a coherent and consistent approach. The essential assumption is that treaties be self-enforcing—that is, individually rational, collectively rational, and fair. The book applies the theory to a number of environmental problems. It provides information on more than three hundred treaties, and analyses a number of case studies in detail. These include depletion of the ozone layer, whaling, pollution

of the Rhine, acid rain, over-fishing, pollution of the oceans, and global climate change. The essential lesson of the book is that treaties should not just tell countries what to do. Treaties must make it in the interests of countries to behave differently. That is, they must restructure the underlying game. Most importantly, they must create incentives for states to participate in a treaty and for parties to comply.

Soon after the apparent suicide of a close friend, Christopher Cornwell receives several photos the friend mailed before his death. Lee Harvey Oswald is in one of the pictures—but how could Oswald be photographed in a small English village when he was supposed to be living in Russia as a defector at the same time? The mystery deepens as Cornwell becomes the target of a shadowy agency as determined to keep its secrets now as it was in 1963.

Diverse Spaces of Childhood and Youth Ruth Evans, Louise Holt, 2016-04-08 Diverse Spaces of Childhood and Youth focuses on the diverse spaces and discourses of children and youth globally. The chapters explore the influence of gender, age and other socio-cultural differences, such as race, ethnicity and migration trajectories, on the everyday lives of children and youth in a range of international contexts. These include the diverse urban environments of Istanbul, Copenhagen,

Helsinki, Toronto, London, and Bratislava and the contrasting rural settings of Ghana and England. The analyses of children's, young people's, parents' and professionals' experiences and discourses provide critical insights into how gender and other socio-cultural differences intersect. The importance of everyday practices and performances in the formation of children's and young people's identities is revealed, through for example, friendships and everyday sociality, mobilities and movements across space in both rural and urban environments. The volume shows how discourses of childhood, particularly those associated with risk, intersect with difference. The recognition of young people's agency and participation is central to many of the chapters, whilst also raising methodological questions about how discourses of childhood and youth are researched. Overall, the book provides an original contribution to geographies of children, youth and families and research on diversity and difference in global contexts. This book was published as a special issue of *Children's Geographies*.

Basic Data on the Economy of Finland Harold A. McNitt, 1966

Teachers' Perspectives on Finnish School Education Eduardo Andere M, 2013-12-11 This superbly researched study offers a chalk-face perspective on the secret of Finland's educational success. Providing an intimate and revealing portrait of the Nordic nation's schools and its teacher training system, it sets out to explain why Finland's students consistently rank top, with

low variance and moderate inputs, among OECD countries across the range of criteria, from reading to mathematics. Alongside the detailed analysis culled from many hours of interviews with teachers and principals and dozens of visits to school throughout the country, the author maps the educational landscape of Finland: the sector's history, culture and development, its guiding principles, methodologies, and learning environments. The result is a cogent assessment of how and why Finland is universally regarded as a high-grade educational exemplar. The volume provides the hundreds of researchers, teaching professionals, and policy makers who visit Finland in search of inspiration with essential background material on the country's magic educational ingredients, which include a highly motivated cohort of well-trained teachers, a recognition of the vital importance of early years education and nurture, functional and inviting learning environments, and a rejection of pedagogical dogma in favour of developing methodologies that produce results at the same time as fostering students' confidence and collegiality. At the same age, Finland's schoolchildren have roughly one less year of formal schooling than most of their international counterparts, do not consider themselves to be overworked, and rank alongside hot-housed Singaporean or South Korean youngsters in international assessments of achievement. They are the educational equivalent of world-beating sports stars who make success appear effortless. This volume lifts the lid on the hard work and careful planning that underpin their achievements.
