Airports Hugh Pearman,2004 Since their emergence at the start of the 20th century, airports have become one of the most distinctive and important of architectural building types. Often used to symbolize progress, freedom and trade, they offer architects the chance to design on a grand scale. At the beginning of the 21st century, airports are experiencing a new and exciting renaissance as they adapt and evolve into a new type of building; one that is complete, adaptable and catering to a new range of demands. As passengers are held in airports far longer than they used to be, they have also now become destinations in their own right. Airports celebrates the most important airport designs in the world. Beginning with an exploration of the first structures of aviation, and early designs such as the Berlin Tempelhof, the book explores the key airports of the century up to the present day, including Eero Saarinen's TWA Terminal in New York, Renzo Piano's Kansai Airport and Norman Foster's Chek Lap Kok in Hong Kong.
