

Hepatitis C Guidelines

Mark Jenkins

Recommendations and guidance on hepatitis C virus self-testing World Health Organization,2021-07-15 WHO has set a global goal to eliminate HCV as a public health problem by 2030. WHO estimates that 58 million people had chronic hepatitis C virus (HCV) infection globally in 2019, and less than a quarter of them were diagnosed. New and innovative approaches are needed to accelerate progress toward the HCV elimination targets. Self-testing is one such approach. These guidelines provide a new recommendation and guidance on HCV self-testing to complement existing HCV testing services in countries. These guidelines also highlight operational considerations to support strategic implementation and scale up of HCV self-testing.

Guidelines for the Screening Care and Treatment of Persons with Chronic Hepatitis C Infection Updated Version April 2016 World Health Organization,2016-04-30 The field of HCV therapeutics continues to evolve rapidly and since the World Health Organization (WHO) issued its first Guidelines for the screening care and treatment of persons with hepatitis C infection in 2014 several new medicines have been approved by at least one stringent regulatory authority. These medicines called direct-acting antivirals (DAAs) are transforming the treatment of HCV enabling regimens that can be administered orally are of shorter duration (as short as eight weeks) result in cure rates higher than 90% and are associated with fewer serious adverse events than the previous interfere on containing regimens. WHO is updating its hepatitis C treatment guidelines to provide recommendations for the use of these new medicines. The objectives of these WHO guidelines are to provide updated evidence-based recommendations for the treatment of persons with hepatitis C infection using where possible all DAA-only combinations. The guidelines also provide recommendations on the preferred regimens based on a patient's HCV genotype and clinical history and assess the appropriateness of continued use of certain medicines. This document also includes existing recommendations on screening for HCV infection and care of persons infected with HCV that were first issued in 2014. The key audience for these guidelines are policy-makers in low- and middle-income countries who formulate country-specific treatment guidelines and who plan infectious disease treatment programmes and services in addition to those people responsible for delivering treatment. The guidelines are appropriate for all countries including high-income countries.

Guidelines on Hepatitis B and C Testing World Health Organization,2017 Testing and diagnosis of hepatitis B (HBV) and C (HCV) infection is the gateway for access to both prevention and treatment services, and is a crucial component of an effective response to the hepatitis epidemic. Early identification of persons with chronic HBV or HCV infection enables them to receive the necessary care and treatment to prevent or delay progression of liver disease. Testing also provides an opportunity to link people to interventions to reduce transmission, through counselling on risk behaviors and provision of prevention commodities (such as sterile needles and syringes) and hepatitis B vaccination. These are the first WHO guidelines on testing for chronic HBV and HCV infection and complement published guidance by WHO on the prevention, care and treatment of chronic hepatitis C and hepatitis B infection. These guidelines outline the public health approach to strengthening and expanding current testing practices for HBV and HCV, and are intended for use across age groups and populations.

Guidelines for the Screening Care and Treatment of Persons with Hepatitis C Infection World Health Organization,2015-04-20 These are the first guidelines dealing with hepatitis C treatment produced by the World Health Organization (WHO) and complement existing guidance on the prevention of transmission of bloodborne viruses, including HCV. They are intended for policy-makers, government officials, and others working in low- and middleincome countries who are developing programmes for the screening, care and treatment of persons with HCV infection. These guidelines serve as a framework that can allow the expansion of clinical services to patients with HCV infection, as they provide key recommendations in these areas and discuss considerations for implementation. The guidelines are also intended for health-care providers who care for persons with HCV infection in low- and middle-countries and provide them guidance in the management of patients infected with HCV.

Hepatitis C Quick Start Kathleen M Davis Np,Kathleen M. Davis,2020-04-26 Hepatitis C Quick Start: A guide for the clinician is written for clinicians

and other health care professionals who need quick access to the fundamentals of chronic Hepatitis C virus (HCV) infection. With the U.S. Preventative Services Task Force (USPSTF) recommendation that all people ages 18 and up be tested for HCV infection, it is anticipated that 800,000 new cases will be diagnosed. What is chronic hepatitis C? What is the current treatment? Is the treatment curative? Can any medical provider treat HCV? The author has taken her years of research and experience treating patients with chronic HCV and put it in this accessible and comprehensive format to provide you with evidence based guidelines, patient testimonies, practical applications, and patient education handouts. After reading Quick Start you will be comfortable and confident with your understanding of hepatitis C and the guidelines for treatment and prevention, and in turn will be able to render evidence based care and direction to your patients.

Guidelines for the Screening Care and Treatment of Persons with Hepatitis C Infection World Health Organization, 2014 These are the first WHO guidelines on the screening care and treatment of persons with HCV infection. They are intended to complement existing guidance on the primary prevention of HCV and other bloodborne viruses by improving blood and injection safety and health care for people who inject drugs (PWID) and other vulnerable groups including those living with HIV (see section 2.4 for related WHO guidelines). These guidelines are primarily targeted at policy-makers in ministries of health working in low- and middle-income countries who formulate country-specific treatment guidelines and who plan infe.

A Clinician's Guide to HCV Treatment in the Primary Care Setting Sherilyn Brinkley, MSN, CRNP, Graham Foster, FRCP, PhD, 2022-07-19 The ability to treat and cure hepatitis C virus (HCV) infection is one of the greatest achievements of modern medicine. The simplified guidelines and the availability of highly effective and manageable direct-acting antiviral agents (DAA) regimens make it increasingly feasible to treat uncomplicated HCV in the primary care setting. This HCV eHealth Source™ activity was developed to empower primary care clinicians, who are ideally positioned to lead frontline efforts to achieve the worldwide goal of eliminating HCV. Practices such as universal screening for HCV, the implementation of treatment regimens, and strategies for supporting, as well as monitoring, patients post-cure will be provided.

Guidelines for the Screening Care and Treatment of Persons with Chronic Hepatitis C Infection Updated Version April 2016 World Health Organization, 2016

The Effective Management of Hepatitis C Infection Maggie Bassendine, Graham R. Foster, Andrew Miles, 2003

Management of Hepatitis C, 2006

Handbook of Hepatitis C Nicolas Goossens, Sophie Clément, Francesco Negro, 2016-05-25 This book is a concise and up-to-date review of the clinical features, pathophysiology, diagnosis, and treatment of patients with hepatitis C. Busy health care professionals who want a quick review of hepatitis C and new developments in treatment for hepatitis C will benefit from this succinct guide. Hepatitis C virus primarily infects liver cells and can lead to chronic damage to the liver. Patients with hepatitis C infection often develop liver sequelae such as fibrosis, cirrhosis, and hepatocellular carcinoma if left untreated. It is estimated that 150 million people worldwide are infected with hepatitis C virus, and if eradication is to be achieved it is imperative to diagnose and treat such individuals.

Management of Hepatitis C, 1997

Hepatitis C Mark Jenkins, 2000 Practical, Medical and Spiritual Guidelines for Daily Living with HCV. For those facing the daily challenge of living with the hepatitis C virus (HCV), this handy book offers a healthy dose of hope and practical advice. A day-to-day guide to managing the disease, Hepatitis C combines up-to-date medical information with a spiritual program, rooted in the Twelve Steps, for coping with the issues associated with HCV infection. In clear, non-technical language, Mark Jenkins discusses the causes, symptoms, and progress of HCV, as well as the latest medical guidelines for containing the disease. He describes complementary treatments and provides information on liver transplantation. With attention to the mind-body connection, Jenkins focuses on strategies for maintaining physical, mental, emotional, and spiritual health. His authoritative, practical, and compassionate guide points the way to a life with HCV that is not just livable but also deeply rewarding.

Viral Hepatitis: Chronic Hepatitis C Resat Ozaras,Dominique Salmon-Ceron,2019-06-21 This book presents up-to-date, practically oriented information on major topics in chronic hepatitis C. The coverage encompasses epidemiology; diagnosis, including molecular methods; treatment and challenges; and the management of co-infections. Readers will find guidance on pretherapeutic evaluation with respect to disease severity and extrahepatic manifestations. Resistance to antiviral treatment and its management are discussed, and the nature of optimal follow-up is addressed in detail. Treatment of HCV/HIV co-infection is considered separately, and the approach in special patient populations is thoroughly examined. Chronic Hepatitis C will be of high value for general practitioners and specialists in gastroenterology, infectious diseases, and internal medicine. It will be international in scope in terms of both authorship and appeal.

Updated recommendations on treatment of adolescents and children with chronic HCV infection World Health Organization,2022-06-24 This policy brief focuses on the new recommendations on treatment of adolescents and children ages ≥3 years with chronic HCV infection. The new treatment recommendations that extend the 2018 “treat all” recommendation for adults with chronic HCV infection to include adolescents and children down to 3 years, and to align the existing recommended pangenotypic DAA regimens (SOF/DCV, SOF/VEL and G/P) for adults, to those for adolescents and children. This alignment is expected to simplify procurement, promote access to treatment among children in LMICs and contribute to global efforts to eliminate the disease.

A National Strategy for the Elimination of Hepatitis B and C National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Population Health and Public Health Practice,Committee on a National Strategy for the Elimination of Hepatitis B and C,2017-06-30 Hepatitis B and C cause most cases of hepatitis in the United States and the world. The two diseases account for about a million deaths a year and 78 percent of world's hepatocellular carcinoma and more than half of all fatal cirrhosis. In 2013 viral hepatitis, of which hepatitis B virus (HBV) and hepatitis C virus (HCV) are the most common types, surpassed HIV and AIDS to become the seventh leading cause of death worldwide. The world now has the tools to prevent hepatitis B and cure hepatitis C. Perfect vaccination could eradicate HBV, but it would take two generations at least. In the meantime, there is no cure for the millions of people already infected. Conversely, there is no vaccine for HCV, but new direct-acting antivirals can cure 95 percent of chronic infections, though these drugs are unlikely to reach all chronically-infected people anytime soon. This report, the second of two, builds off the conclusions of the first report and outlines a strategy for hepatitis reduction over time and specific actions to achieve them.

Clinical Rounds in Hepatology Virendra Singh,Akash Roy,2022-01-29 This book presents a comprehensive collection of classic cases and problem scenarios encountered as bedside case discussions during ward rounds. It facilitates the practical management of hepatic disorders. The unique aspect of hepatology involves the blend of the basic tenet of clinical medicine applied to liver disease and a multitude of interventional modalities in the management of liver, biliary, and pancreatic diseases. This book takes the reader through the process of ruling in and ruling out possibilities based on clinical data (history and examination) and then traces the logical trajectory of each case from recommended investigations to the analysis of test results and finally to making a syndromic diagnosis. By adopting an evidence-based approach, the book emphasizes analytical and need-based studies to exclude any mimics. This book helps practice hepatologists and gastroenterologists for a systematic approach towards the most common cases.
