Carbon Capture and Storage José Carlos Magalhães Pires,2019-08-23 Climate change is one of the main threats to modern society. This phenomenon is associated with an increase in greenhouse gas (GHGs, mainly carbon dioxide—CO₂) emissions due to anthropogenic activities. The main causes are the burning of fossil fuels and land use change (deforestation). Climate change impacts are associated with risks to basic needs (health, food security, and clean water), as well as risks to development (jobs, economic growth, and the cost of living). The processes involving CO₂ capture and storage are gaining attention in the scientific community as an alternative for decreasing CO₂ emissions, reducing its concentration in ambient air. The carbon capture and storage (CCS) methodologies comprise three steps: CO₂ capture, CO₂ transportation, and CO₂ storage. Despite the high research activity within this topic, several technological, economic, and environmental issues as well as safety problems remain to be solved, such as the following needs: increase of CO₂ capture efficiency, reduction of process costs, and verification of the environmental sustainability of CO₂ storage.

Lignocellulose Biorefinery Engineering Hongzhang Chen,2015-03-03 Biomass resources and their refining are key research topics internationally as alternatives to fossil fuel resources and oil refining. This book explores the heterogeneous nature of lignocellulosic biomass, which restricts its use as a raw material, and describes the theoretical basis of the lignocellulose refinery. It puts forward the theory of the integrated biomass refinery system, which produces multiple products, including biofuels, biomaterials, biochemicals, food and feed based on careful fractionation of the raw material. Chapter 1 introduces the significance and development of lignocellulose biorefining. Chapter 2 gives the theoretical basis of lignocellulose biorefinery engineering. Chapters 3 to 6 describe in detail biomass refinery engineering from the perspectives of feedstocks, conversions, products and processes respectively. Models of integrated industrial biomass refinery chains are presented in Chapter 7. Finally, Chapter 8 considers future trends in lignocellulose biorefining. Explores mechanisms of selective fractionation of biomass based on biomass structural characteristics and product requirements Addresses biological, physical and chemical conversion technologies, as well as combinations of different methods based on the biomass material characteristics This thorough exploration of lignocellulose biorefining is written by an expert from a key research institute in this field

Emulating Natural Forest Landscape Disturbances Ajith H. Perera, Lisa J. Buse, Michael G. Weber, 2008-01-11 What is a natural forest disturbance? How well do we understand natural forest disturbances and how might we emulate them in forest management? What role does emulation play in forest management? Representing a range of geographic perspectives from across Canada and the United States, this book looks at the escalating public debate on the viability of natural disturbance emulation for sustaining forest landscapes from the perspective of policymakers, forestry professionals, academics, and conservationists. This book provides a scientific foundation for justifying the use of and a solid framework for examining the ambiguities inherent in emulating natural forest landscape disturbance. It acknowledges the divergent expectations that practitioners face and offers a balanced view of the promises and challenges associated with applying this emerging forest management paradigm. The first section examines foundational concepts, addressing questions of what emulation involves and what ecological reasoning substantiates it. These include a broad overview, a detailed review of emerging forest management paradigms and their global context, and an examination of the ecological premise for emulating natural disturbance. This section also explores the current understanding of natural disturbance regimes, including the two most prevalent in North America: fire and insects. The second section uses case studies from a wide geographical range to address the characterization of natural disturbances and the development of applied templates for their emulation through forest management. The emphasis on fire regimes in this section reflects the greater focus that has traditionally been placed on understanding and managing fire, compared with other forms of disturbance, and utilizes several viewpoints to address the lessons learned from historical disturbance patterns. Reflecting on current thinking in the field, immediate challenges, and potential directions, the final section moves deeper into the issues of practical applications by exploring the expectations for and feasibility of emulating natural disturbance through forest management.

Author Bio Introduction A keen young budding botanist once asked me, "Ma'am, how do we know the difference between herbs, shrubs and trees?" Well, the answer is that a majority of herbal plants are definitely soft stemmed and smaller in size when compared to shrubs which are woody and often branched. Herbs are annuals and sometimes perennials. Shrubs are perennials like trees. And trees are definitely different, because they have long woody trunks, which are branched, grow to huge heights, and live really long. Herbs have been used since ancient times, for medicinal value, and also for cookery purposes. Shrubs are mainly ornamental plants, with their leaves and flowers being used as culinary accompaniments, and also for medicinal purposes. Herbs can be shrubs. Shrubs can be herbs. Woody stemmed bushes like rosemary, thyme, lavender, winter savory, and Sage come in the herbal category. The serious use of plants in medicine is in the province of homeopathic practitioners and natural herbalists who employ most species of herbs from mosses to trees in making their herbal remedies. This book

is going to give you an introduction to some of the herbs, which are easy to grow and you can obtain easily fresh or dried. How did people get to know about herbs in ancient times? The awareness of the edible as well as the remedial qualities of herbs must have been gained by happy and sad experiences in prehistoric days. When food was scarce and often very nasty, pungent herbs made it more palatable. The larger succulent leaves, and plants provided salads and vegetables as an accompaniment to hunted mastodons and other prehistoric beasties. Soon, man found out that some of these herbs could cure and heal wounds and ease suffering, as even the tastiest culinary herb has a real medicinal value and virtue. This is how prehistoric man found out that Moss - sphagnum - was an excellent healer of wounds. Just imagine he went hunting and got into an argument with a sabertooth. And there he was with wounds all over his body, lying nose down on the mossy ground. So he found himself clutching a handful of moss, squeezing it, and trying to stop the blood flow from the wounds. Hey, the Moss was so absorbent, that it stopped the wound from bleeding any more. So back he came back to his tribal camp with Moss sticking all over his body. After a week or so, he noticed that his wounds were healing really well. Now, most of this was just by trial and error, and luck. His genetic makeup was strong, and his diet conducive to good natural healing. But that meant that the next time he went on the warpath with other tribes in the vicinity, he made sure that the healer had packed lots of sphagnum, along with food in a pouch for every warrior. Early civilizations inherited this knowledge and developed it even further, and both doctors and cooks used herbs appreciatively and with increasing beneficial effects. Doctors experimented with every kind of plant and cooks with the more deliciously flavored types.

Herb-Drug Combinations Shanmugam Hemaiswarya,Pranav Kumar Prabhakar,Mukesh Doble,2022-10-05 Plant extracts or their pure natural constituents have been used traditionally for thousands of years for treating diseases with considerable success in India and other Asian countries. In addition, they have also been used as complements or supplements with conventional medicine. This book discusses the latest research in the application of combination therapy, namely herbs and drugs, in the treatment of a range of communicable and non-communicable diseases to achieve a synergistic effect. This synergy may help in reducing the amount of drug, its toxicity, side effects, and development of resistance as well as improve its efficacy. The book also discusses the pharmacodynamic and pharmacokinetic parameters, experimental tools to determine the impact of combination, computational approaches to identify synergy, statistical analysis of data, and clinical and regulatory issues. The book is useful for researchers in the fields of pharmacology, pharmacy and medicinal chemistry and those working in pharmaceutical and nutraceutical industries. This book could open up new strategies to focus on multiple targets to combat complex diseases unlike the single targeted drugs that are being currently marketed by the pharmaceuticals industries.
