Mastering Kali Linux for Advanced Penetration Testing Vijay Kumar Velu, 2022-02-28 Master key approaches used by real attackers to perform advanced pentesting in tightly secured infrastructure, cloud and virtualized environments, and devices, and learn the latest phishing and hacking techniques Key Features Explore red teaming and play the hackers game to proactively defend your infrastructure Use OSINT, Google dorks, Nmap, recon-ng, and other tools for passive and active reconnaissance Learn about the latest email, Wi-Fi, and mobile-based phishing techniques Book Description Remote working has given hackers plenty of opportunities as more confidential information is shared over the internet than ever before. In this new edition of Mastering Kali Linux for Advanced Penetration Testing, you'll learn an offensive approach to enhance your penetration testing skills by testing the sophisticated tactics employed by real hackers. You'll go through laboratory integration to cloud services so that you learn another dimension of exploitation that is typically forgotten during a penetration test. You'll explore different ways of installing and running Kali Linux in a VM and containerized environment and deploying vulnerable cloud services on AWS using containers, exploiting misconfigured S3 buckets to gain access to EC2 instances. This book delves into passive and active reconnaissance, from obtaining user information to large-scale port scanning. Building on this,

different vulnerability assessments are explored, including threat modeling. See how hackers use lateral movement, privilege escalation, and command and control (C2) on compromised systems. By the end of this book, you'll have explored many advanced pentesting approaches and hacking techniques employed on networks, IoT, embedded peripheral devices, and radio frequencies. What you will learn

Exploit networks using wired/wireless networks, cloud infrastructure, and web services

Learn embedded peripheral device, Bluetooth, RFID, and IoT hacking techniques

Master the art of bypassing traditional antivirus and endpoint detection and response (EDR) tools

Test for data system exploits using Metasploit, PowerShell Empire, and CrackMapExec

Perform cloud security vulnerability assessment and exploitation of security misconfigurations

Use bettercap and Wireshark for network sniffing

Implement complex attacks with Metasploit, Burp Suite, and OWASP ZAP

Who this book is for

This fourth edition is for security analysts, pentesters, ethical hackers, red team operators, and security consultants wanting to learn and optimize infrastructure/application/cloud security using advanced Kali Linux features. Prior penetration testing experience and basic knowledge of ethical hacking will help you make the most of this book.

System Overview of Cyber-Technology in a Digitally Connected Global Society Joseph O. Esin,2017-01-16 The author acknowledges the links between education, technology, network operating systems, data, and information transmission and communications, cybertechnology, culture of education, instruction, and learning. In essence, recognizing the correlation among the education and the world of codified technology, this book will assist in providing a deeper understanding and greater improvement of instructional methods and strategies. In addition, this book will provide a correlation between education and technology as a promising and systematic approach for moving away from or conventional methods of classroom instruction and learning endeavors. The readers, in essence, will see the integration of education and cybertechnology as a pinnacle of educational reform for current and future generations. Furthermore, the contents of this book also help expound the benefits and the broad range of possibilities that technology can offer in education, instruction, and the learning process. The proliferation of the uncertain telegraph and mechanized printing machines changed the quality of human writing. We can also expect the use of a well-synthesized educational technology textbook for instruction and learning to lead to the same startling changes in human society. It is the authors view that the anticipated changes should not assume any deficiency on the part of the professors, instructors, and allied educators. Rather, it should ascertain that educators need to be proficient in the use of technology to manage and deliver instruction in different subject areas, such as computer information technology, network technology, wired and wireless technology, and cyber security threats. The author firmly believes that current and future learners are essentially the conglomeration of unfurnished learner materials that are ready and willing to be furnished by the educational system.
