Additional changes include the following: A new discussion on the mononuclear phagocytic system and the cell biology of resident tissue macrophage has been added. The latest research findings in immune cell activation have been incorporated. Updated cellular biology topics include beige adipose tissue, the epithelial-mesenchymal transition, conjunctiva-associated lymphatic tissue, biogenesis and function of peroxisomes, and

microsomes as the newest discovered form of cell-to-cell communication. New, more detailed information about the histology of the female and male external genitalia has been included. The skin chapter has been supplemented and updated with many new additions, including of skin color and aging. With the constant improvement in microscopic methods, a new basic discussion on three-dimensional (3D) microscopy methods was incorporated in the methods chapter.

Histopathology Enrique Poblet, 2012-12-05 This edition aims to present some relevant topics in the histopathology area that may be of interest for medical doctors and for other professionals interested in pathology. Histopathology applies basic knowledge obtained from biologic and anatomic science to make diagnosis, to determine the severity and progress of a condition and to evaluate the possible response to certain therapies. Thus, it is not surprising that this discipline constantly expands with progresses produced in biology. In addition, novel technologies that have been recently incorporated, and the adoption of the histopathological methods by different areas, contribute to enlarge the fields that may apply the histopathological methodology. The papers selected for this book comprise a cross-section of topics that reflect the variety of perspectives that histopathology contemplates. Selected representative reviews of topics that are considered relevant or introduce novel concepts are included in this book.
