High-yield Histopathology Dudek,2011 High-yield histopathology reviews the relationships of basic histology to the pathology, physiology, and pharmacology of clinical conditions that are tested on the USMLE Step 1 and seen in clinical practice.

Basic Histology Luiz Carlos Uchôa Junqueira,José Carneiro,Robert O. Kelley,1998 This is the leading textbook for medical histology and microscopic anatomy courses. It features an updated description of the structure and function of cells and the function and specialization of the four tissue groups: epithelial, connective, adipose, and nerve. Chapters on the cytoplasm and cell nucleus are updated to include the most recent discoveries on cell biology. It also describes the cellular function of each organ. Clinical correlations are highlighted throughout the book.

Histology - An Essential Textbook D. J. Lowrie, Jr.,2020-03-16 Learn to identify histological structures and their correlated functions! Histology: An Essential Textbook is a concise, multimedia study guide for medical students who need to learn the functions and related correlations of cells, tissues, and organs of the human body. Professor D.J. Lowrie, Jr. has written a unique and practical medical histology resource based on self-directed modules originally created to replace live histology laboratory sessions. This resource will help medical students learn how to identify histological structures on slide preparations and electron micrographs. Short videos by the author, who demonstrates structures via digitized histology slides, provide additional guidance. Shorter, targeted concepts and brief explanations accompanied by numerous illustrations, self-assessment quizzes, and videos demonstrating key features of histological structures set this resource apart from existing, text-dense books. Key Features Nearly 850 images, consisting primarily of electron and light micrographs, aid in identification of histological structures and long-term retention Correlation of histological structure with other basic science disciplines, such as gross anatomy, embryology, and pathology allows students to integrate material effectively Over 1000 online multiple choice questions and answers mirror exam topics students frequently encounter in curriculum and the USMLE® Nearly 375 videos provide a personal tutor that teaches students histological structures, while providing tips for proper identification This is a must-have self-study guide for medical students, as well as a stellar teaching tool for instructors.

Cells and Tissues Rogers,2012-12-02 Cells and Tissues: An Introduction to Histology and Cell Biology begins by explaining why histology should be studied. Some chapters follow on the techniques for studying cells and tissues, the anatomy of the cell, the epithelia, the connective tissues, and the blood. This book also covers topics on the immunity against foreign material; contractility, specifically at how it is brought about and at how the system changes in a stationary cell; and harnessing of contraction to produce movement. This text also looks into the communication systems within cells, the life and death of cells, and the histological sections of small intestine. The responses of the body to injury in the processes of inflammation and repair are also explored. This book will be useful to students starting in histology, though it does assume some elementary knowledge of biochemistry and of the structure of the mammalian body.

Compendium of Histology Anders Rehfeld,Malin Nylander,Kirstine Karnov,2017-09-07 This book has been designed to help medical students succeed with their histology classes, while using less time on studying the curriculum. The book can both be used on its own or as a supplement to the classical full-curriculum textbooks normally used by the students for their histology classes. Covering the same curriculum as the classical textbooks, from basic tissue histology to the histology of specific organs, this book is formatted and organized in a much simpler and intuitive way. Almost all text is formatted in bullets or put into structured tables. This makes it quick and easy to digest, helping the student get a good overview of the curriculum. It is easy to locate specific information in the text, such as the size of cellular structures etc. Additionally, each chapter includes simplified illustrations of various histological features. The aim of the book is to be used to quickly brush up on the curriculum, e.g. before a class or an exam. Additionally, the book includes guides to distinguish between the different histological tissues and organs that can be presented to students microscopically, e.g. during a histology spot test. This guide lists the specific characteristics of the different histological specimens and also describes how to distinguish a specimen from other similar specimens. For each histological specimen, a simplified drawing and a photomicrograph of the specimen, is presented to help the student recognize the important characteristics in the microscope. Lastly, the book contains multiple “memo boxes” in which parts of the curriculum are presented as easy-to-remember mnemonics.
