Regularity of Optimal Transport Maps and Applications Guido Philippis,2013-06-28 In this thesis, we study the regularity of optimal transport maps and its applications to the semi-geostrophic system. The first two chapters survey the known theory, in particular there is a self-contained proof of Brenier' theorem on existence of optimal transport maps and of Caffarelli's Theorem on Holder continuity of optimal maps. In the third and fourth chapter we start investigating Sobolev regularity of optimal transport maps, while in Chapter 5 we show how the above mentioned results allows to prove the existence of Eulerian solution to the semi-geostrophic equation. In Chapter 6 we prove partial regularity of optimal maps with respect to a generic cost functions (it is well known that in this case global regularity can not be expected). More precisely we show that if the target and source measure have smooth densities the optimal map is always smooth outside a closed set of measure zero.

Transportation and Traffic Theory 2009: Golden Jubilee William H. K. Lam,S. C. Wong,Hong K. Lo,2009-09-01 th It is our great privilege and honor to present the proceedings of the 18 International Symposium on Transportation and Traffic Theory (ISTTT), held at The Hong Kong Polytechnic University in Hong Kong, China on 16-18 July 2009. th The 18 ISTTT is jointly organized by the Hong Kong Society for Transportation Studies and Department of Civil and Structural Engineering of The Hong Kong Polytechnic University. The ISTTT series is the main gathering for the world's transportation and traffic theorists, and those who are interested in contributing to or gaining a deep understanding of traffic and transportation phenomena in order to better plan, design and manage the transportation system. Although it embraces a wide range of topics, from traffic flow theories and demand modeling to road safety and logistics and supply chain modeling, the ISTTT is hallmarked by its intellectual innovation, research and development excellence in the treatment of real-world transportation and traffic problems. The ISTTT prides itself in the extremely high quality of its proceedings. Previous ISTTT conferences were held in Warren, Michigan (1959), London (1963), New York (1965), Karlsruhe (1968), Berkeley, California (1971), Sydney (1974), Kyoto (1977), Toronto (1981), Delft (1984), Cambridge, Massachusetts (1987), Yokohama (1990), Berkeley, California (1993), Lyon (1996), Jerusalem (1999), Adelaide (2002), College Park, Maryland (2005), and London (2007). th th This 18 ISTTT celebrates the 50 Anniversary of this premier conference series.

Cell Biology and Membrane Transport Processes ,1994-05-24 This volume brings together contributors from several different fields of cell biology, physiology, and molecular biology. The common thread that runs through all of the work presented is that cell processes regulate the activities of membrane transport proteins and classes of membrane transport proteins participate in a number of critical cell phenomena. This volume is unique in covering three different members of the ATP Binding Cassette family (MDR, CFTR and STE6) in one place, as well as in including structure and function analysis of the sodium pump in the same forum where its cell biology is considered. The book will appeal to a broad range of biologists with interests in membrane transport, membrane biology, cell biology, and sorting.

International Textbook of Diabetes Mellitus R. A. De Fronzo,Ele Ferrannini,Harry Keen,Paul Zimmet,2004-06-25 This new edition is the most comprehensive reference on both the clinical and scientific aspects of diabetes, and is truly global in perspective with the inclusion of epidemiology and the nature and care of diabetes in different parts of the world. Following a similar format to the previous editions, the primary philosophy of the book is to comprehensively cover the basic science of metabolism, linking this closely to the pathophysiology and clinical aspects of the disease. A valuable resource for the whole diabetes community, the new edition offers: * Fully revised, updated and expanded chapters * Comprehensive coverage of all aspects of diabetes * 116 extensively referenced chapters * Full colour throughout * Available in print and online The International Textbook of Diabetes Mellitus, Third Edition is also available online via Wiley InterScience. With the flexibility afforded by the powerful search and navigation capabilities of Wiley InterScience, you can search the Textbook by subject, article and keyword. New and revised articles added regularly ensure that both professionals and students working within diabetes are kept abreast of rapidly developing areas such as genetics, treatment and epidemiology. This excellent work is an essential reference tool for all members of diabetes and endocrine teams, medical students, medical schools and libraries, and provides a valuable resource for pharmaceutical companies and industries which have an interest in this important field. FROM REVIEWS OF THE SECOND EDITION: The scope is extraordinarily wide and truly international...a must for all libraries and any individuals who are seriously interested in the diabetes epidemic... (Diabetologia) ...a cornerstone in the field of diabetes... (The European Journal of Medicine) ...This multi-authored textbook provides a wealth of information spanning virtually all aspects of diabetes... (Trends in Endocrinology and Metabolism)

Science By Simulation - Volume 1: A Mezze Of Mathematical Models Andrew French,2022-05-30 A Mezze of Mathematical Methods is Volume 1 of Science by Simulation. It is a recipe book of mathematical models that can be enlivened by the transmutation of equations into computer code. In this volume, the examples chosen are an eclectic mix of systems and stories rooted in common experience, rather than those normally associated with constrained courses on Physics, Chemistry or Biology which are taught in isolation and susceptible to going out of date in a few years. Rather than a 'what' of Science, this book is aimed at the 'how', readily applied to projects by students and professionals. Written in a friendly style based upon the author's expertise in teaching and pedagogy, this mathematically rigorous book is designed for readers to follow arguments step-by-step with stand-alone chapters which can be read independently. This approach will provide a tangible and readily accessible context for the development of a wide range of interconnected mathematical ideas and computing methods that underpin the practice of Science.

The Endocrine Pancreas and Regulation of Metabolism ,2001 This comprehensive and authoritative reference work examines the role of the endocrine pancreas in the regulation of fat, protein, and carbohydrate metabolism. The effects of hormones are broadly examined with emphasis on the gene, the cell and the organism as a whole. The functions of the pancreatic hormones in the integrated

response of the body to various physiologic challenges are discussed. Following a general introduction by Sir Philip Randle, the book is divided into four sections:1. The Islets of Langerhans, 2. Target Tissues for Metabolic Regulatory Hormones, 3. Influence of Hormones Acting as Acute Metabolic Regulators on the Actions of Islet Hormones, and 4. Integrated Hormonal Responses to Physiological Challenges. The fourth part covers many interesting conditions such as pregnancy, aging, obesity, hypoglycemia, insulin-dependent diabetes mellitus, and starvation.

Gromov-Witten Theory of Quotients of Fermat Calabi-Yau Varieties Hiroshi Iritani,Todor Milanov,Yongbin Ruan, Yefeng Shen,2021-06-21 Gromov-Witten theory started as an attempt to provide a rigorous mathematical foundation for the so-called A-model topological string theory of Calabi-Yau varieties. Even though it can be defined for all the Kähler/symplectic manifolds, the theory on Calabi-Yau varieties remains the most difficult one. In fact, a great deal of techniques were developed for non-Calabi-Yau varieties during the last twenty years. These techniques have only limited bearing on the Calabi-Yau cases. In a certain sense, Calabi-Yau cases are very special too. There are two outstanding problems for the Gromov-Witten theory of Calabi-Yau varieties and they are the focus of our investigation.

Optimal Transport Cédric Villani,2008-10-26 At the close of the 1980s, the independent contributions of Yann Brenier, Mike Cullen and John Mather launched a revolution in the venerable field of optimal transport founded by G. Monge in the 18th century, which has made breathtaking forays into various other domains of mathematics ever since. The author presents a broad overview of this area, supplying complete and self-contained proofs of all the fundamental results of the theory of optimal transport at the appropriate level of generality. Thus, the book encompasses the broad spectrum ranging from basic theory to the most recent research results. PhD students or researchers can read the entire book without any prior knowledge of the field. A comprehensive bibliography with notes that extensively discuss the existing literature underlines the book’s value as a most welcome reference text on this subject.

Cities Without Ground Adam Frampton,Clara Wong,Jonathan Solomon,2012 Hong Kong is a city without ground. This is true both physically (built on steep slopes, the city has no ground plane) and culturally (there is no concept of ground). Density obliterates figure-ground in the city, and in turn re-defines public-private spatial relationships. Without a ground, there can be no figure either. In fact, Hong Kong lacks any of the traditional figure-ground relationships that shape urban space: axis, edge, centre, even fabric. 'Cities without ground' explores this condition by mapping three-dimensional circulation networks that join shopping malls, train stations and public transport interchanges, public parks and private lobbies as a series of spatial models and drawings. These networks form a continuous space of variegated environments that serves as a fundamental public resource for the city. The emergence of the shopping malls as spaces of civil society rather than of global capital as grounds of resistance comes as a surprise. This continuous network and the microclimates of temperature, humidity, noise and smell which differentiate it constitute an entirely new form of urban spatial hierarchy. Air particle concentration is both logical and counterintuitive: outdoor air is more polluted, while the air in the higher-end malls is cleaner than air adjacent to lower value retail programs. Train stations, while significantly cooler than bus terminals, have only moderately cleaner air. Boundaries determined by sound or smell (a street of flower vendors or bird keepers, or an artificially perfumed mall) can ultimately provide more substantive spatial boundaries than a ground. While space in the city may be continuous, plumes of temperature differential or air particle intensity demonstrate that environments are far from equal.
