Virtual Environments and Advanced Interface Design Woodrow Barfield,Thomas A. Furness III,1995-06-01 This sweeping introduction to the science of virtual environment technology masterfully integrates research and practical applications culled from a range of disciplines, including psychology, engineering, and computer science. With contributions from the field's foremost researchers and theorists, the book focuses in particular on how virtual technology and interface design can better accommodate human cognitive, motor, and perceptual capabilities. Throughout, it brings the reader up-to-date with the latest design strategies and cutting-edge virtual environments, and points to promising avenues for future development. The book is divided into three parts. The first part introduces the reader to the subject by defining basic terms, identifying key components of the virtual environment, and reviewing the origins and elements of virtual environments. The second part focuses of current technologies used to present visual, auditory, tactile, and kinesthetic information. The book concludes with an in-depth analysis of how environments and human perception are integrated to create effective virtual systems. Comprehensive and splendidly written, Virtual Environments and Advanced Interface Design will be the bible on the subject for years to come. Students and researchers in computer science, psychology, and cognitive science will all want to have a copy on their shelves.

The Elite Leigh Neville,2019-11-28 Using rare and previously unpublished images from around the world, The Elite: The A-Z of Modern Special Operations Forces is the ultimate guide to the secretive world of modern special operations forces. It sends the reader back in time to operations such as Eagle Claw in Iran and the recapture of the Iranian Embassy in London and then forward to recent operations against al-Shabaab and Islamic State. Entries also detail units ranging from the New Zealand SAS Group to the Polish GROM, and key individuals from Iraq counter-terrorism strategist General Stanley McChrystal to Victoria Cross recipient SASR Corporal Mark Donaldson. Answering questions such as how much the latest four-tube night vision goggles worn by the SEALs in Zero Dark Thirty cost, which pistol is most widely employed by special operators around the world and why, and if SOF still use HALO jumps, this book is the definitive single-source guide to the world's elite special forces.

The Netherlands East Indies Campaign 1941-42 Marc Lohnstein,2021-06-24 At the end of 1941, Imperial Japan targeted The East Indies in an attempt to secure access to precious oil resources. The Netherlands East Indies Campaign featured complex Japanese and Allied operations, and included the first use of airborne troops in the war. This highly illustrated study is one of the less well-known campaigns of the Pacific War. Imperial Japan's campaigns of conquest in late 1941/early 1942 were launched in order to achieve self-sufficiency for the Japanese people, chiefly in the precious commodity of oil. The Netherlands (or Dutch) East Indies formed one of Japan's primary targets, on account of its abundant rubber plantations and oilfields. The Japanese despatched an enormous naval task force to support the amphibious landings over the vast terrain of the Netherlands East Indies. The combined-arms offensive was divided into three groups: western, centre and eastern. The isolated airfields and oilfields were, however, picked off one by one by the Japanese, in the rush to secure the major islands before major Allied reinforcements arrived. This superbly illustrated title describes the operational plans and conduct of the fighting by the major parties involved, and assesses the performance of the opposing forces on the battlefield, bringing to life an often-overlooked campaign of the Pacific War.
