**Android Tablets for Seniors in easy steps** Nick Vandome, 2013-06-05 Tablet  
computers are beginning to appear everywhere on the digital landscape and, at first sight, they can be slightly daunting in terms of what they can do and how to make best use of them. Tablets are by no means a passing gimmick, however, and in many ways they have the potential to replace desktop or laptop computers in many households. Tablets are powerful, portable and packed full of functionality for most computing tasks. Android is the operating system on a wide range of tablets and it is one of the major players in this market. As the appetite for mobile computing increases, the use of Android tablets is also likely to increase significantly. **Android Tablets for Seniors in easy steps** looks at the range of devices available and their specifications and functionality. It also explains the Android operating system and how to use it on your tablet in terms of navigating around, performing all of your favourite tasks, getting online and turning your tablet into a mobile library and entertainment centre. Android tablets offer an interactive, touch screen experience and the book shows how to get up and running with this so that you can quickly find your way around with Android. It also details how you can use the Android settings to ensure that your tablet looks and works in exactly the way that you want. Apps are the programs that give Android tablets their functionality and this is covered in depth, from using the preinstalled apps, to downloading and using the huge selection available

from the Google Play Store, which is linked directly to Android tablets. It also shows how to get the best apps for popular activities such as travel, health and wellbeing, family history and online shopping. Online connectivity is a vital element for tablets and the book looks at connecting to the web via Wi-Fi, using email, making phone and video calls to family and friends with Skype and diving into the world of social networking. Security on tablets is just as important as on any other computer and this is covered in terms of preventing access to your tablet and staying safe online and when using your apps. Overall, Android Tablets for Seniors in easy steps shows the value of having one of these devices and presents clear and visually attractive advice, in larger type for easier reading, about joining the latest computer revolution so that you can feel confident about participating in the world of mobile computing. The book features the Google Nexus but is applicable to all tablets running the Android operating system.

HOTEL REVIEW: SENTIMENT ANALYSIS USING MACHINE LEARNING AND DEEP LEARNING WITH PYTHON GUI Vivian Siahaan,Rismon Hasiholan Sianipar,2022-03-15

The data used in this project is the data published by Anurag Sharma about hotel reviews that were given by costumers. The data is given in two files, a train and test. The train.csv is the training data, containing unique User\_ID for each entry with the review entered by a costumer and the browser and device used. The target variable is Is\_Response, a variable that states whether the costumers was happy or not happy while staying in the hotel. This

type of variable makes the project to a classification problem. The test.csv is the testing data, contains similar headings as the train data, without the target variable. The models used in this project are K-Nearest Neighbor, Random Forest, Naive Bayes, Logistic Regression, Decision Tree, Support Vector Machine, Adaboost, LGBM classifier, Gradient Boosting, and XGB classifier, and LSTM. Three vectorizers used in machine learning are Hashing Vectorizer, Count Vectorizer, and TFIDF Vectorizer. Finally, you will develop a GUI using PyQt5 to plot cross validation score, predicted values versus true values, confusion matrix, learning curve, performance of the model, scalability of the model, training loss, and training accuracy.
