INSULATING YOUR HOUSE Andy McCrea,2012-08-01 Our dependence on fossil fuels is at an all-time high and for economic and environmental reasons it is vitally important that we save energy and reduce our carbon footprint. This book is essential reading for all those homeowners who wish to insulate their properties effectively in order to save energy, permanently reduce fuel bills and increase the comfort of their homes. The author emphasizes the 'do-it-yourself' elements of house insulation and provides readers with information to take the practical steps that will make them significant financial savings. In this book, the author: demonstrates the opportunities for real financial savings that insulation can provide year on year; emphasizes why insulation is such a good idea and discusses the main areas of the house that lose heat, concentrating on the building fabric; describes the tools, special clothing, materials and techniques that are required for DIY house insulation; explains why refurbishments, repairs or extensions all offer the opportunity to introduce insulation into your home; examines the Building Regulations, which set the quality, best practice and safety standards for home improvements and construction work; reviews the range of insulation materials that can be used, from natural substances such as hemp and sheep's wool, to mineral insulation such as glass wool, polystyrene and phenolic foam; considers the DIY opportunities to reduce the heat lost through external walls and through floors and roofs; demonstrates how heat is lost through draughts and ventilation and suggests some DIY jobs to minimize this; discusses energy-efficient glazing and potential savings by installing double and triple, gas-filled, high-efficiency glazing systems.

Performance of 8 Cold-Climate Envelopes for Passive Houses Rolf Jacobson,2012-09-10 Master's Thesis from the year 2011 in the subject Art - Architecture / History of Construction, grade: none, University of Minnesota - Twin Cities (College of Design), language: English, abstract: Exterior envelopes for Passive Houses in very cold climates have not been developed, tested, and used as extensively as those in more mild climates such as central Europe. The purpose of this investigation was to push that development further by testing and comparing the performance of a variety of North American and Scandinavian envelope types that have been used in limited numbers for Passive Houses in those regions. A group of eight envelopes were selected and tested with a number of software analyses: Athena life cycle analysis, WUFI hygrothermal modeling, and THERM and EN ISO 6946 2-D U-value calculations for thermal bridging. Finally, the Passive House Planning Package (PHPP) was used to confirm that the envelopes met Passive House energy performance requirements in a very cold climate using a basic passive solar house design. Although significant variation was found in the performance of these eight envelope types, almost all of them were found capable of meeting the energy efficiency and thermal bridging requirements of the Passive House certification in a very cold climate, while maintaining moisture safety, durability, and significant life-cycle energy and carbon savings. These findings demonstrate that even in cold climates, a variety of envelope types can be used successfully for certified Passive Houses. Envelope types: 1) Advanced 2x6 framing24" on center with interior cross strapping and exterior insulation, insulated with mineral wool, 2) Advanced 2x6 framing24" on center, insulated with high-density spray polyurethane foam and exterior rigid foam, 3) Double 2x4 stud wall with studs 16" on center, insulated with blown cellulose, 4) I-joist (TJI) balloon framing 24" on center, insulated with blown fiberglass, 5) Insulated concrete form wall (ICF), using integral rigid EPS foam insulation, 6) Concrete block wall, insulated with exterior mineral wool, 7) Massivtre/Structural engineered panel (SEP), insulated with exterior rigid foam, and 8) Structural insulated panel (SIP), using integral EPS rigid foam insulation. For comparison, a base option was also studied: Standard 2x6 framing 16" on center with fiberglass batt insulation. See Appendix for diagrams of each envelope.

Insulating Modernism Kiel Moe,2014-08-20 What is the best way to consider energy in buildings? For over a century, the building industry has largely focused on ideas of insulation and isolation for its energetic practices. A growing movement of designers claim that other concepts and practices are required for the non-isolated energy systems of architecture. This book describes the history, theory and facts of the mainstream isolation technologies and the emerging alternative design approaches. It is a book on the scientific, material, and design history of building isolation; but more importantly, it is a book on isolated and non-isolated perspectives on energy in architecture. Written by a registered practicing architect with detailed technical knowledge, who is at the same time a researcher and experienced teacher, the aim is to understand the different scientific, architectural and cultural approaches to energy and to promote a non-isolated perspective: a thermodynamically accurate, ecologically powerful, culturally relevant, and architecturally ambitious perspective on energy in architecture.

This Cold House Colin Smith,2007-06-30 A "witty, erudite, and accessible" guide to creating an environmentally friendly home without sacrificing comfort (Jeffrey C. May, author of *My House Is Killing Me!*). Does turning the thermostat down on a winter's night offset the costs of reheating the house in the morning? What will best prevent energy loss: new windows or insulation in the attic? Is

heating oil cheaper than natural gas? In *This Cold House*, Colin Smith blends science with anecdote and example to help homeowners identify heating and cooling priorities and choose the most appropriate methods, tools, and equipment. Basic equations allow you to estimate possible savings in annual heating and cooling bills and determine payback times for improvement projects. Practical and entertaining, *This Cold House* illuminates the concepts behind energy efficiency and translates them into ideas you can use, whether you live in a castle, igloo, or house. “Packs in important insights and is a pick for any general interest lending library catering to homeowners and those concerned with energy savings and the environment.” —Midwest Book Review “Smith . . . has a wonderful way with words, and his storytelling is superb. This guy sure knows how to hang an analogy on a scientific principle to make it delightfully understandable.” —Dan Holohan, heatinghelp.com
