Why Diets Make Us Fat Sandra Aamodt, 2016-06-07 "If diets worked, we'd all be thin by now. Instead, we have enlisted hundreds of millions of people into a war we can't win. What's the secret to losing weight? If you're like most of us, you've tried cutting calories, sipping weird smoothies, avoiding fats, and swapping out sugar for Splenda. The real secret is that all of those things are likely to make you weigh more in a few years, not less. In fact, a good predictor of who will gain weight is who says they plan to lose some. Last year, 108 million Americans went on diets, to the applause of doctors, family, and friends. But long-term studies of dieters consistently find that they're more likely to end up gaining weight in the next two to fifteen years than people who don't diet. Neuroscientist Sandra Aamodt spent three decades in her own punishing cycle of starving and regaining before turning her scientific eye to the research on weight and health. What she found defies the conventional wisdom about dieting: ·Telling children that they're overweight makes them more likely to gain weight over the next few years. Weight shaming has the same effect on adults. ·The calories you absorb from a slice of pizza depend on your genes and on your gut bacteria. So does the number of calories you're burning right now. ·Most people who lose a lot of weight suffer from obsessive thoughts, binge eating, depression, and anxiety. They also burn less energy and find eating much more rewarding than it was before they lost weight. ·Fighting against your body's set

point—a central tenet of most diet plans—is exhausting, psychologically damaging, and ultimately counterproductive. If dieting makes us fat, what should we do instead to stay healthy and reduce the risks of diabetes, heart disease, and other obesity-related conditions? With clarity and candor, Aamodt makes a spirited case for abandoning diets in favor of behaviors that will truly improve and extend our lives.

Weight Management Institute of Medicine, Food and Nutrition Board, Committee on Military Nutrition Research, Subcommittee on Military Weight Management, 2003-12-01 The primary purpose of fitness and body composition standards in the U.S. Armed Forces has always been to select individuals best suited to the physical demands of military service, based on the assumption that proper body weight and composition supports good health, physical fitness, and appropriate military appearance. The current epidemic of overweight and obesity in the United States affects the military services. The pool of available recruits is reduced because of failure to meet body composition

standards for entry into the services and a high percentage of individuals exceeding military weight-for-height standards at the time of entry into the service leave the military before completing their term of enlistment. To aid in developing strategies for prevention and remediation of overweight in military personnel, the U.S. Army Medical Research and Materiel Command requested the Committee on Military Nutrition Research to review the scientific evidence for: factors that influence body weight, optimal components of a weight loss and weight maintenance program, and the role of gender, age, and ethnicity in weight management.

Why Women Need Fat William D. Lassek M.D., Steven Gaulin, 2011-12-29 The groundbreaking discovery that shows why women need fat to lose fat. Why do women struggle so much with weight? Can women ever lose weight and keep it off? In this research-driven and counterintuitive book, an anthropologist and a public health doctor team up to answer those questions. Blending anecdotal evidence with hard science, they explain how women's weight is controlled by evolution-but more important- they reveal how a change in diet three decades ago may be the reason women today are bigger than their grandmothers were. Explaining why fat (both in our diet and in our body) is crucial to long-term health, the authors show not only why women tend (and need) to get heavier after having their first child, but also destroy cultural myths like all fat is bad for you. Providing a plan that can help any woman achieve a natural, healthy weight- without dieting- Why Women Need Fat not only gives women the tools they need to shed weight, but also a better understanding of why those last five pounds seem impossible to lose.
