Paul Clarence Challen, Paul Challen

Hurricane and Typhoon Alert! Paul Clarence Challen, Paul Challen, 2004

Explains what a hurricane is, how it forms, the damage it can cause, and precautions that can be taken to stay safe during hurricane season.

Hurricane Watch Jack Williams, Bob Sheets, 2002-02-05 The ultimate guide to the ultimate storms, Hurricane Watch is a fascinating blend of science and history from one of the world's foremost meteorologists and an award-winning science journalist. This in-depth look at these awe-inspiring acts of nature covers everything from the earliest efforts by seafarers at predicting storms to the way satellite imaging is revolutionizing hurricane forecasting. It reveals the latest information on hurricanes: their effects on ocean waves, the causes of the variable wind speeds in different parts of the storm, and the origins of the super-cooled shafts of water that vent at high altitudes. Hurricane Watch is a compelling history of man's relationship with the deadliest storms on earth. Includes: - The story of the nineteenth-century Cuban Jesuit whose success at predicting the great cyclones was considered almost mystical. - A new look at Isaac Cline, whose infamous failure to predict the Galveston Hurricane left him obsessed with the devastating effects of storm surge. - The story of the Hurricane Hunters, including the first man ever to deliberately fly into a hurricane. - A complete account of how computer modeling has changed hurricane tracking. - A history of Project Stormfury: the only significant, organized effort to reduce the damaging

strength of severe hurricanes. - A unique firsthand account of Hurricane Andrew by both authors, who were at the National Hurricane Center when Andrew struck. - A listing of the deadliest storms in history.

This picture book also includes a Find Out More section with an activity on air pressure, web research prompts, and a glossary of storm and weather vocabulary. Both text and artwork were vetted by Dr. William J. Brennan of the National Oceanic and Atmospheric Administration for accuracy. Adequacy of the National Weather Service's Hurricane and Flood Warning System United States. Congress. House. Committee on Government Operations. Government Activities Subcommittee, 1972

Emergency Alert and Warning Systems National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on the Future of Emergency Alert and Warning Systems: Research Directions, 2018-04-19 Following a series of natural disasters, including Hurricane Katrina, that revealed shortcomings in the nation's ability to effectively alert populations at risk, Congress passed the Warning, Alert, and Response Network (WARN) Act in 2006. Today, new technologies such as smart phones and social media platforms offer new ways to communicate with the public, and the information ecosystem is much broader, including additional official channels, such as government social media accounts, opt-in short message service (SMS)-based alerting systems, and reverse 911 systems; less official channels, such as main stream media outlets and weather applications on connected devices; and unofficial channels, such as first person reports via social media. Traditional media have also taken advantage of these new tools,

including their own mobile applications to extend their reach of beyond broadcast radio, television, and cable. Furthermore, private companies have begun to take advantage of the large amounts of data about users they possess to detect events and provide alerts and warnings and other hazard-related information to their users. More than 60 years of research on the public response to alerts and warnings has yielded many insights about how people respond to information that they are at risk and the circumstances under which they are most likely to take appropriate protective action. Some, but not all, of these results have been used to inform the design and operation of alert and warning systems, and new insights continue to emerge. Emergency Alert and Warning Systems reviews the results of past research, considers new possibilities for realizing more effective alert and warning systems, explores how a more effective national alert and warning system might be created and some of the gaps in our present knowledge, and sets forth a research agenda to advance the nation's alert and warning capabilities.

Hurricane Almanac Bryan Norcross,2007-05-29 Essential Information from CBS News' Hurricane Analyst Bryan Norcross's pioneering and courageous TV

coverage of Hurricane Andrew in 1992 helped millions of people in Florida cope with the killer storm. This revised and updated version of last year's popular almanac adds detailed stories of the powerful hurricanes of the past that would be catastrophes if they happened today and explores how explosive coastal development during a time of relatively few hurricanes has set the stage for mega-disasters. If hurricanes make landfall today at the rate they did in much of the twentieth century, how could we prevent the unimaginable destruction? A new section will also help you better understand hurricane advisories. Bryan Norcross's Hurricane Almanac is two books in one. The first half is hurricane science, history, and perspectives on how we, as a society, deal with hurricanes. The second half is a personal guide to Living Successfully in the Hurricane Zone. In addition to reviewing and explaining the relatively mild 2006 hurricane season, it looks forward to hurricane seasons to come, highlights the fascinating history of hurricanes interacting with civilization, and details our rapidly increasingly ability---but still with limitations---to predict the severity and tracks of storms. With preparation checklists and shopping lists, an easy-to-understand guide to the technical information coming from the National Hurricane Center, and critical practical information, Hurricane Almanac is your essential guide to coping with Mother Nature's greatest storms. A provocative chapter entitled: How I'd Do It Better details Norcross's ideas for a better hurricane system. -Family Communications -Evacuation Decision-making -Staying in a House -Staying in an

Hurricane Warning Franklyn Mansfield Branley, Leonard P. Kessler, 1977

Hurricane , 1990

Storm Surge and Hurricane Safety with North Atlantic Tracking Chart United States. National Weather Service, 1979

Storm Warning Nancy Mathis, 2007-03-06 The Perfect Storm on the prairie, Storm Warning is a compulsively readable account of one of the most terrible tornadoes in history -- and the extraordinary people who kept it from becoming the deadliest. May 3, 1999, is a day that Oklahomans will never forget. By the time the sun set over a ravaged plain, some 71 tornadoes had claimed 11,000 homes and businesses and caused a billion dollars in damages. One of them was a mile-wide monster of incredible power, the fiercest F5 twister to hit a metropolitan area, and whose 300 mph winds were the fastest ever recorded on the planet. Veteran journalist Nancy Mathis draws on numerous interviews to weave the story of those few terrifying hours that irrevocably changed the lives of many Oklahomans. Storm Warning features Kara Wiese, who fought to save her son from the fatal winds, and Charlie Cusack, who followed the tornado's progress on television until it came knocking on his front door. Amazingly, only thirty-eight people perished at the hands of the Oklahoma F5. Many lives were saved by the efforts of professionals such

as Ted Fujita, the creator of the Fujita Scale (dubbed Mr. Tornado for his relentless pursuit to unravel a twister's mysteries); the oft-criticized but dogged government meteorologists; and Gary England, a resourceful TV weatherman whose tireless efforts prepared hundreds of people in the tornado's path. Storm Warning alternates between personal stories and the history of the struggle to understand this bewildering force of Mother Nature, creating a nail-biting, captivating look at surviving the fury from the skies.
