### **101 Questions and Answers about Hypertension**

William M. Manger, Norman M. Kaplan, 2001-10

Hypertension, or high blood pressure, affects an estimated 50 million Americans and is a major contributor to cardiovascular disease, the leading cause of death in the United States. Through proper management the effects of hypertension can be minimized. Dr. William Manger's 101 Questions & Answers About Hypertension is a comprehensive Q&A format book providing the reader all the information they need to help manage hypertension and prevent its often lethal effects. 101

Questions & Answers About Hypertension answers all the most important questions about hypertension and its relationship to other diseases, from hypothyroidism and Alzheimer's to arteriosclerosis and preeclampsia, among others. It also has suggestions for positive lifestyle changes as well as information on alternative and traditional treatment options and questions related to change of life and the effectiveness of blood pressure machines in pharmacies, shopping malls, etc.

Question 8 addresses the enormous magnitude of hypertension in the United States. Hypertension is a precursor to stroke and cardiovascular disease. Cardiovascular disease kills nearly 1 million Americans every year and cripples and disables the same; it's also responsible for more than 52 million lost workdays. In addition, every year more than one-million people suffer heart attacks and 600,000 suffer strokes, a large percentage of

both proving fatal. However, Dr. Manger is convinced these statistics can be reduced. Inspired by the decrease in the incidence of heart attack and stroke, Manger saw that with improved medical management and healthy lifestyle changes, hypertension could be controlled and its complications minimized or prevented. He believes a close patient-doctor relationship and a clear understanding of what hypertension is and how to manage it is essential for bringing it under control and minimizing the risk of further health complications. Even though Manger is positive overall about statistics, still there is room for improvement: nearly 30% of people suffering from hypertension go undiagnosed and only 27% of the 50 million people with this condition have their blood pressure under control. 101 Questions & Answers About Hypertension seeks to reduce the statistical gap by giving readers a comprehensive understanding of hypertension so they are able to knowledgeably communicate with their doctors and make informed decisions and choices to improve their health and reduce health risk.

**Home Blood Pressure Monitoring** George S. Stergiou, Gianfranco Parati, Giuseppe Mancia, 2019-10-31 Hypertension remains a leading cause of disability and death worldwide. Self-monitoring of blood pressure by patients at home is currently recommended as a valuable tool for the diagnosis and management of hypertension. Unfortunately, in clinical practice, home blood pressure monitoring is often inadequately implemented, mostly due to the use of inaccurate devices and inappropriate methodologies. Thus, the potential of the method to improve the management

of hypertension and cardiovascular disease prevention has not yet been exhausted. This volume presents the available evidence on home blood pressure monitoring, discusses its strengths and limitations, and presents strategies for its optimal implementation in clinical practice. Written by distinguished international experts, it offers a complete source of information and guide for practitioners and researchers dealing with the management of hypertension.

In order to bridge the gap between available resources and the significant need for services, the World Health Organization launched the Mental Health Gap Action Programme (mhGAP). The objective of mhGAP is to scale-up care and services using evidence-based interventions for prevention and management of priority MNS conditions. The mhGAP Intervention Guide version 1.0 for MNS disorders

for non-specialist health settings was developed in 2010 as a simple technical tool to allow for integrated management of priority MNS conditions using protocols for clinical decision-making. With uptake in over 90 countries, mhGAP-IG 1.0 version has had widespread success. It is our pleasure to present mhGAP version 2.0, with updates incorporating new evidence-based guidance, enhanced usability, and new sections to expand its use by both health care providers as well as programme managers. It is our hope that this guide will continue to provide the road-map to deliver care and services for people with MNS disorders around the world and lead us closer to achieving the goal of universal health coverage.
