Access to Mobile Services Xu Yang, Athman Bouguettaya, 2009-04-09 Access to Mobile Services focuses on methods for accessing broadcast based M-services from multiple wireless channels. This book presents a novel infrastructure that provides a multi-channel broadcast framework for mobile users to effectively discover and access composite M-services. Multi-channel algorithms are proposed for efficiently accessing composite services. Access to Mobile Services provides an in-depth survey of wireless data access and motivates the need to treat mobile services differently. A wireless adaptation of Service Oriented Architecture (SOA) is also covered. Designed for researchers and practitioners who work in the general area of mobile services, this book is also suitable for advanced-level students in computer science. Forewords by: Michael P. The relations between climate change and child labour in agriculture Food and Agriculture Organization of the United Nations, 2023-06-07 Climate change-related events undermine children's educational attainment, exposing them to child labour, hazardous work and forced migration. This nexus is particularly relevant for agriculture and its subsectors: indeed, they absorb about 26 percent of the economic impacts of climate change-related disasters and host 70 percent of all child labour. This study aims to identify the extent to which climate change-related events and impacts affect child labour in agriculture by exploring the underlying connection between the two challenges as the initial step towards integrating a child labour lens within the international community's work on climate change. It showcases the multi-dimensional relationship through a mixed-methods approach in four countries: Côte d'Ivoire, Ethiopia, Nepal and Peru. The qualitative and quantitative findings propose a set of policy implications that are in line with the concept that one-size-fits-all policy prescriptions are unlikely to work, as they must be tailored to different communities based on their characteristics.

Mobile Virtual Work J.H. Erik Andriessen, Matti Vartiainen, 2005-12-27 Dear Reader This is a book about mobile virtual work. It aims at clarifying the basic concepts and showing present practices and future challenges. The roots of the book are in the collaboration of few European practitioners and - searchers, who met each other under the umbrella of the Swedish SALTSA programme (see next page) in January 2002 in Stockholm. The group was first called 'ICT, Mobility and Work Organisation' but redefined itself quickly as 'Mobile Virtual Cooperative Work' group. The change of the name reflects the development of reasoning in the group. We could not find much material on mobile work, certainly not systematic studies, - though a growing interest in mobile technologies and services could be found. Practices of telework and virtual organizations were better known, but we were convinced that the combination with mobile work was so- thing different and new. Our main target became to understand what it was all about. The next step was an expert meeting in October 2004 at Rånäs Castle again in Sweden. A wider group of experts was invited to present their views on mobile virtual work and ideas about book chapters from different perspectives of working life. Some of the expertise could be found through the network of the AMI@Work family created by the New Working En-ironments unit of the European Commission's Information Society Dir- torate-General. Also close collaboration was developed with the related MOSAIC program.
