Wild Visions BEN A. MINTEER,Mark Klett,Stephen J. Pyne,2022-11-22 A stunning combination of landscape photography and thematic essays exploring how the concept of wilderness has evolved over time Our ideas of wilderness have evolved dramatically over the past one hundred and fifty years, from a view of wild country as an inviolable place apart to one that exists only within the matrix of human activity. This shift in understanding has provoked complicated questions about the importance of the wild in American environmentalism, as well as new aesthetic expectations as we reframe the wilderness as (to some degree) a human creation. Wild Visions is distinctive in its union of landscape photography and environmental thought, a merging of short, thematic essays with a striking visual narrative. Often, the wild is viewed in binary terms: either revered as sacred and ecologically pure or dismissed as spoiled by human activities. This book portrays wilderness instead as an evolving gamut of understandings, a collage of views and ideas that is still in process.

Performing Image Isobel Harbison,2019-04-09 An examination of how artists have combined performance and moving image for decades, anticipating our changing relation to images in the internet era. In Performing Image, Isobel Harbison examines how artists have combined performance and moving image in their work since the 1960s, and how this work anticipates our changing relations to images since the advent of smart phones and the spread of online prosumerism. Over this period, artists have used a variety of DIY modes of self-imaging and circulation—from home video to social media—suggesting how and why Western subjects might seek alternative platforms for self-expression and self-representation. In the course of her argument, Harbison offers close analyses of works by such artists as Robert Rauschenberg, Yvonne Rainer, Mark Leckey, Wu Tsang, and Martine Syms. Harbison argues that while we produce images, images also produce us—those that we take and share, those that we see and assimilate through mass media and social media, those that we encounter in museums and galleries. Although all the artists she examines express their relation to images uniquely, they also offer a vantage point on today's productive-consumptive image circuits in which billions of us are caught. This unregulated, all-encompassing image performativity, Harbison writes, puts us to work, for free, in the service of global corporate expansion. Harbison offers a three-part interpretive framework for understanding this new proximity to images as it is negotiated by these artworks, a detailed outline of a set of connected practices—and a declaration of the value of art in an economy of attention and a crisis of representation.

Practical Retinal Photography and Digital Imaging Techniques Marshall E. Tyler,Patrick J. Saine,Timothy J. Bennett,2003 Producing quality fundus photographs requires more than just a camera; it also calls for substantial knowledge and skill. Perfect for non-expert ophthalmic professionals, this new resource provides step-by-step guidance for producing high-quality retinal images. With over 225 full-colour illustrations, it covers every aspect of retinal, fundus, and digital imaging. Provides only need to know information omitting coverage pertinent only to certified retinal photographers. Explains how to produce sharp retinal photographs with a traditional or non-mydratic camera. Describes how to effectively capture, process, and output digital images. Features hundreds of color illustrations, tables, and boxes that show how to proceed and demonstrate the difference that proper technique can make.

Leonardo da Vinci Tamra B. Orr,2018-12-15 The term Renaissance man is used to describe a number of talented individuals today, but it got its real start with Leonardo da Vinci. As an artist, inventor, and scholar, he produced everything from the Mona Lisa to drawings of the world's first airplanes. Through informative main text and sidebars, annotated quotes from scholars, and detailed examples of da Vinci's work, readers are introduced to a genius who never went to formal school but invented machines that would not be made for centuries. Leonardo da Vinci is a fascinating historical figure, and his story is sure to inspire young artists.

The Image of Christ in Modern Art Richard Harries,2016-03-03 The Image of Christ in Modern Art explores the challenges presented by the radical and rapid changes of artistic style in the 20th century to artists who wished to relate to traditional Christian imagery. In the 1930s David Jones said that he and his contemporaries were acutely conscious of 'the break', by which he meant the fragmentation and loss of a once widely shared Christian narrative and set of images. In this highly illustrated book, Richard Harries looks at some of the artists associated with the birth of modernism such as Epstein and Rouault as well as those with a highly distinctive understanding of religion such as Chagall and Stanley Spencer. He discusses the revival of confidence associated with the rebuilding of Coventry Cathedral after World War II and the commissioning of work by artists like Henry Moore, Graham Sutherland and John Piper before looking at the very testing last quarter of the 20th century. He shows how here, and even more in our own time, fresh and important visual interpretations of Christ have been created both by well known and less well known artists. In conclusion he suggests that the modern movement in art has turned out to be a friend, not a foe of Christian art.Through a wide and beautiful range of images and insightful text, Harries explores the continuing challenge, present from the beginning of Christian art, as to how that which is visual can in some way

indicate the transcendent.

Digital Radiography and PACS E-Book Christi Carter,Beth Veale,2022-07-26 Gain a full understanding of the basic principles and techniques of digital imaging! Using an easy-to-understand format and style, Digital Radiography and PACS, 4th Edition provides the latest information on digital imaging systems. It offers tips on producing clear radiographic images, and helps you build skills in computed radiography (CR) and digital radiography (DR), as well as picture archiving and communications systems (PACS). Coverage also includes quality control and management guidelines for PACS, CR, and DR. Written by noted educators Christi Carter and Beth Veale, this book provides excellent preparation for the ARRT credentialing exam and for success as a practicing radiographer or technologist. Coverage of digital imaging and PACS is provided at the right level for student radiographers and for practicing technologists transitioning to digital imaging. Chapter outlines, learning objectives, and key terms at the beginning of each chapter introduce the chapter content, and help students organize study and boost their comprehension. More than 200 photographs and illustrations help to illuminate digital imaging concepts. Practical information addresses topics such as working with CR/DR workstations, including advanced image processing and manipulation functions; PACS workstations, archiving solutions, and system architectures; and effective techniques for digitizing film, printing images, and preparing image files. Bulleted summaries recap the main points of each chapter, ensuring that students focus on the most important concepts. Review questions at the end of chapters are linked to the chapter objectives and help students assess their understanding of the material, with answers provided to instructors on the Evolve website. NEW! Latest information on digital imaging systems includes computed radiography (CR), digital radiography (DR), and picture archiving and communications systems (PACS), as well as the data required by practicing technologists who are transitioning to digital imaging. NEW! Updates reflect the latest ARRT and ASRT content specifications. NEW! Full-color design is added to this edition.

Image Bite Politics Maria Elizabeth Grabe,Erik Page Bucy,2009-03-02 Image Bite Politics is the first book to systematically assess the visual presentation of presidential candidates in network news coverage of elections and to connect these visual images with shifts in public opinion. Presenting the results of a comprehensive visual analysis of general election news from 1992-2004, encompassing four presidential campaigns, the authors highlight the remarkably potent influence of television images when it comes to evaluating leaders. The book draws from a variety of disciplines, including political science, behavioral biology, cognitive neuroscience, and media studies, to investigate the visual framing of elections in an incisive, fresh, and interdisciplinary fashion. Moreover, the book presents findings that are counterintuitive and challenge widely held assumptions--yet are supported by systematic data. For example, Republicans receive consistently more favorable visual treatment than Democrats, countering the conventional wisdom of a liberal media bias; and image bites are more prevalent, and in some elections more potent, in shaping voter opinions of candidates than sound bites. Finally, the authors provide a foundation for promoting visual literacy among news audiences and bring the importance of visual analysis to the forefront of research.

Front-End Vision and Multi-Scale Image Analysis Bart M. Haar Romeny,2008-10-24 Many approaches have been proposed to solve the problem of finding the optic flow field of an image sequence. Three major classes of optic flow computation techniques can discriminated (see for a good overview Beauchemin and Barron IBeauchemin19951): gradient based (or differential) methods; phase based (or frequency domain) methods; correlation based (or area) methods; feature point (or sparse data) tracking methods; In this chapter we compute the optic flow as a dense optic flow field with a multi scale differential method. The method, originally proposed by Florack and Nielsen [Florack1998a] is known as the Multiscale Optic Flow Constrain Equation (MOFCE). This is a scale space version of the well known computer vision implementation of the optic flow constraint equation, as originally proposed by Horn and Schunck [Horn1981]. This scale space variation, as usual, consists of the introduction of the aperture of the observation in the process. The application to stereo has been described by Maas et al. [Maas 1995a, Maas 1996a]. Of course, difficulties arise when structure emerges or disappears, such as with occlusion, cloud formation etc. Then knowledge is needed about the processes and objects involved. In this chapter we focus on the scale space approach to the local measurement of optic flow, as we may expect the visual front end to do. 17. 2 Motion detection with pairs of receptive fields As a biologically motivated start, we begin with discussing some neurophysiological findings in the visual system with respect to motion detection.
