Immersive Multimodal Interactive Presence Angelika Peer,Christos D. Giachritsis,2012-03-14 Immersive Multimodal Interactive Presence presents advanced interdisciplinary approaches that connect psychophysical and behavioral haptics research with advances in haptic technology and haptic rendering. It delivers a summary of the results achieved in the IMMERSENCE European project and includes selected chapters by international researchers. Organized into two parts: I. Psychophysical and Behavioral Basis and II. Technology and Rendering, it is an excellent example of interdisciplinary research directed towards the advancement of multimodal immersive virtual environments with particular focus on haptic interaction. The twelve chapters of the book are grouped around three different scenarios representing different types of interactions in virtual environments: Person-Object (PO), Person-Object-Person (POP) and Person-Person (PP) interaction. Recent results of psychophysical and behavioral studies are reported along with new technological developments for haptic displays and novel haptic rendering techniques.

Handbook of Virtual Environments Kelly S. Hale,Kay M. Stanney,2002-01-01 This Handbook, with contributions from leading experts in the field, provides a comprehensive, state-of-the-art account of virtual environments (VE). It serves as an invaluable source of reference for practitioners, researchers, and students in this rapidly evolving discipline. It also provides practitioners with a reference source to guide their development efforts and addresses technology concerns, as well as the social and business implications with which those associated with the technology are likely to grapple. While each chapter has a strong theoretical foundation, practical implications are derived and illustrated via the many tables and figures presented throughout the book. The Handbook presents a systematic and extensive coverage of the primary areas of research and development within VE technology. It brings together a comprehensive set of contributed articles that address the principles required to define system requirements and design, build, evaluate, implement, and manage the effective use of VE applications. The contributors provide critical insights and principles associated with their given area of expertise to provide extensive scope and detail on VE technology. After providing an introduction to VE technology, the Handbook organizes the body of knowledge into five main parts: *System Requirements--specifies multimodal system requirements, including physiological characteristics that affect VE system design. *Design Approaches and Implementation Strategies--addresses cognitive design strategies; identifies perceptual illusions that can be leveraged in VE design; discusses navigational issues, such as becoming lost within a virtual world; and provides insights into structured approaches to content design. *Health and Safety Issues--covers direct physiological effects, signs, symptoms, neurophysiology and physiological correlates of motion sickness, perceptual and perceptual-motor adaptation, and social concerns. *Evaluation--addresses VE usability engineering and ergonomics, human performance measurement in VEs, usage protocols; and provides means of measuring and managing visual, proprioceptive, and vestibular aftereffects, as well as measuring and engendering sense of presence. *Selected Applications of Virtual Environments--provides a compendium of VE applications. The Handbook closes with a brief review of the history of VE technology. The final chapter provides information on the VE profession, providing those interested with a number of sources to further their quest for the keys to developing the ultimate virtual world.

Everyone Loves Live Music Fabian Holt,2021-01-27 For decades, millions of music fans have gathered every summer in parks and fields to hear their favorite bands at festivals such as Lollapalooza, Coachella, and Glastonbury. How did these and countless other festivals across the globe evolve into glamorous pop culture events, and how are they changing our relationship to music, leisure, and public culture? In Everyone Loves Live Music, Fabian Holt looks beyond the marketing hype to show how festivals and other institutions of musical performance have evolved in recent decades, as sites that were once meaningful sources of community and culture are increasingly subsumed by corporate giants. Examining a diverse range of cases across Europe and the United States, Holt upends commonly-held ideas of live music and introduces a pioneering theory of performance institutions. He explores the fascinating history of the club and the festival in San Francisco and New York, as well as a number of European cities. This book also explores the social forces shaping live music as small, independent venues become corporatized and as festivals transform to promote mainstream Anglophone culture and its consumerist trappings. The book further provides insight into the broader relationship between culture and community in the twenty-first century. An engaging read for fans, industry professionals, and scholars alike, Everyone Loves Live Music reveals how our contemporary enthusiasm for live music is more fraught than we would like to think.

Turning Points Richard Jochum,Judith M. Burton,Jason Watson,2023 Turning Points invites readers to join in a dialogue about creating more responsive studio art pedagogies for all, following a global pandemic that forced art educators to do what many believed to be impossible: teach studio art online. Amidst this sudden shift, long-simmering social and political challenges pushed to the forefront, such as racial injustice, access to educational resources, economic inequality, and environmental degradation. As these issues compounded, art educators and art students navigated a radical shift in priorities—rethinking the materials, spaces, and relationships that form the foundation of the discipline. This collection of essays brings together international voices from across the field to share the lived experience of responsive teaching during the pandemic, and how we might rebuild a better educational ecosystem. Chapters address how new technologies, more inclusive spaces, and a heightened focus on relationships will reshape the studio art programs of the future. Book Features: Synthesizes diverse cultural viewpoints from both leaders and practitioners in the field of art education. Focuses on the impact of the pandemic and its aftermath on studio art teaching and learning.Connects art education to sociocultural world issues, student wellness, mentorship, equity, and racial inequality.Offers suggestions for how to move the field forward to meet the challenges of the 21st century. Contributors include David Bogen, Bill Gaskins, Michelle Grabner, Samuel Hoi, Steven Henry Madoff, Ernesto Pujol, Seph Rodney, Stacey Salazar, Kimberly Sheridan, Paul A. C. Sproll, Jessica Stockholder, Robert Storr, and Mick Wilson.

The VR Book Jason Jerald,2015-09-01 Virtual reality (VR) potentially provides our minds with direct access to digital media in a way that at first seems to have no limits.However, creating compelling VR experiences is an incredibly complex challenge.When VR is done well, the results are brilliant and pleasurable experiences that go beyond what we can do in the real world.When VR is done badly, not only is the system frustrating to use, but sickness can result.Reasons for bad VR are numerous; some failures come from the limitations of technology, but many come from a lack of understanding perception, interaction, design principles, and real users. This book discusses such issues, focusing upon the human element of VR rather than technical implementation, for if we do not get the human element correct, then no amount of technology will make VR anything more than an interesting tool confined to research laboratories. Even when VR principles are fully understood, first implementations are rarely novel and never ideal due to the complex nature of VR and the countless possibilities. However, the VR principles discussed within enable us to intelligently experiment with the rules and iteratively design towards innovative experiences.

The Touch Kinfolk,2019-09 The Touch is a new collaboration between Nathan Williams of Kinfolk and Jonas Bjerre-Poulsen of Norm Architects that welcome readers into over 25 inspiring spaces where interior design is not only visually appealing but engages all of the human senses. Through beautiful homes, hotels, museums, and retail stores--from contemporary designs by Ilse Crawford and Bijoy Jain to classic cases by Arne Jacobsen--readers are invited to explore how experiencing elements such as light, nature, materiality, color, and community can deliberately bring us back to our senses and imbue every day with a richer quality. In addition to

stunning photography and interviews with design industry leaders as John Pawson and David Thulstrup, the book also details philosophical and art history references that reflect the tradition of design and color theory. For a deeper understanding of the concepts explored, The Touch includes an appendix which profiles architects such as Lina Bo Bardi and Richard Neutra. Heritage design pieces that helped influence this movement are also listed in the book. The Touch--Spaces Designed for the Senses by Kinfolk & Norm Architects. Published by gestalten.

Virtual Art Oliver Grau,2004-09-17 An overview of the art historical antecedents to virtual reality and the impact of virtual reality on contemporary conceptions of art. Although many people view virtual reality as a totally new phenomenon, it has its foundations in an unrecognized history of immersive images. Indeed, the search for illusionary visual space can be traced back to antiquity. In this book, Oliver Grau shows how virtual art fits into the art history of illusion and immersion. He describes the metamorphosis of the concepts of art and the image and relates those concepts to interactive art, interface design, agents, telepresence, and image evolution. Grau retells art history as media history, helping us to understand the phenomenon of virtual reality beyond the hype. Grau shows how each epoch used the technical means available to produce maximum illusion. He discusses frescoes such as those in the Villa dei Misteri in Pompeii and the gardens of the Villa Livia near Primaporta, Renaissance and Baroque illusion spaces, and panoramas, which were the most developed form of illusion achieved through traditional methods of painting and the mass image medium before film. Through a detailed analysis of perhaps the most important German panorama, Anton von Werner's 1883 The Battle of Sedan, Grau shows how immersion produced emotional responses. He traces immersive cinema through Cinerama, Sensorama, Expanded Cinema, 3-D, Omnimax and IMAX, and the head mounted display with its military origins. He also examines those characteristics of virtual reality that distinguish it from earlier forms of illusionary art. His analysis draws on the work of contemporary artists and groups ART+COM, Maurice Benayoun, Charlotte Davies, Monika Fleischmann, Ken Goldberg, Agnes Hegedues, Eduardo Kac, Knowbotic Research, Laurent Mignonneau, Michael Naimark, Simon Penny, Daniela Plewe, Paul Sermon, Jeffrey Shaw, Karl Sims, Christa Sommerer, and Wolfgang Strauss. Grau offers not just a history of illusionary space but also a theoretical framework for analyzing its phenomenologies, functions, and strategies throughout history and into the future.

Spatial Augmented Reality Oliver Bimber,Ramesh Raskar,2005-08-08 Like virtual reality, augmented reality is becoming an emerging platform in new application areas for museums, edutainment, home entertainment, research, industry, and the art communities using novel approaches which have taken augmented reality beyond traditional eye-worn or hand-held displays. In this book, the authors discuss spatial augmented r

The Re-Emergence of Virtual Reality Leighton Evans,2018-10-22 In this short book, Evans interrogates the implications of VR's re-emergence into the media mainstream, critiquing the notion of a VR revolution by analysing the development and ownership of VR companies while also exploring the possibilities of immersion in VR and the importance of immersion in the interest and ownership of VR enterprises. He assesses how the ideologies and desires of both computer programmers and major Silicon Valley industries may influence how VR worlds are conceived and experienced by users while also exploring the mechanisms that create the immersive experience that underpins interest in the medium.

Horizons of Difference Ruthanne Crapo Kim,Yvette Russell,Brenda Sharp,2022-07-01 Horizons of Difference offers twelve original essays inspired by Luce Irigaray's complex, nuanced critique of Western philosophy, culture, and metaphysics, and her call to rethink our relationship to ourselves and the world through sexuate difference. Contributors engage urgent topics in a range of fields, including trans feminist theory, feminist legal theory, film studies, critical race theory, social-political theory, philosophy of religion, environmental ethics, philosophical aesthetics, and critical pedagogy. In so doing, they aim to push the scope of Irigaray's work beyond its horizon. Horizons of Difference seeks conversations that Irigaray herself has yet to fully consider and explores areas that stretch the limits of the notion of sexuate difference itself. Sexuate difference is a unifying mode of thought, bringing disparate disciplines and groups together. Yet it also resists unification in demanding that we continually rethink the basic coordinates of space, place, and identity. Ultimately, Horizons of Difference insists that the fragmented, wounded subjectivities within the dominant regime of masculine sameness can inform how we negotiate space, find place, and transform identity.

Biomedical Visualisation Ourania Varsou,Paul M. Rea,Michelle Welsh,2022-12-16 This book focuses on the challenges to biomedical education posed by the lockdowns and restrictions to on campus teaching brought about by the COVID-19 pandemic and highlights the tools and digital visualization technologies that have been successfully developed and used for remote teaching. Biomedical education for science, medical, dental and allied health professionals relies on teaching visual and tactile knowledge using practice-based approaches. This has been delivered for decades via on-campus lectures, workshops and laboratories, teaching practical skills as well as fundamental knowledge and understanding. However, the arrival of the COVID-19 pandemic meant that education across the globe had to pivot very quickly to be able to deliver these skills and knowledge in a predominantly online environment. This brought with it many challenges, as Higher Education staff, had to adapt to deliver these visual subjects remotely. This book addresses the challenges and solutions faced by Higher Education staff in teaching visual content in distance education. Chapters include literature reviews, original research, and pedagogical reflections for a wide range of biomedical subjects, degrees such as medicine, dentistry and veterinary sciences with examples from undergraduate and postgraduate settings. The goal of the book is to provide a compendium of expertise based on evidence gathered during the COVID-19 pandemic, as well as reflections on the challenges and lessons learned from this dramatic shift in teaching. It also presents new examples of best practices that have emerged from this experience to ensure that they are not lost as we return to on-campus learning in a new era of biomedical teaching. This book will be of interest to anyone looking for a helpful reference point when designing online or blended teaching for visual practice-based subjects.

FABRIC[ated] Tolya Stonorov,2023-07-10 FABRIC[ated] examines fabric as a catalyst for innovation, reflection, change and transformation in architecture. This book explores the ways in which research and development of fabric can, and historically has, influenced and revolutionized architecture, teaching and design. Responsive, flexible, impermanent, fluid and adaptive—fabric interacts with, and influences architecture, offering innovative solutions and increased material responsibility. Foundation and theory chapters establish clear precedent and futures for fabric's position in architectural discourse. The case study section examines 14 international projects through three different threads: Veiling, Compression and Tension. Case studies include a diverse range of projects from the HiLo unit at Nest and CAST's fabric formed concrete projects to a discussion of the impact of fabric on SO-IL and Kennedy Violich Architect's professional work, demonstrating new and fresh methods for addressing sustainability and social justice through the use of fabric in architecture. Through the work of the many authors of this book, we see fabric as drape, skin, veil, mold, concept and inspiration. Fabric, in its broadest definition, is an important and innovative material in the development of socially conscious architecture. Offering readers pedagogical and practical models for international projects highlighting fabric's use in architecture, this book will appeal to the novice and the expert, architecture students and practitioners alike.

Playing Nature Alenda Y. Chang,2019-12-31 A potent new book examines the overlap between our ecological crisis and video games Video games may be fun and immersive diversions from daily life, but can they go beyond the realm of entertainment to do something serious—like help us save the planet? As one of the signature issues of the twenty-first century, ecological deterioration is seemingly everywhere, but it is rarely considered via the realm of interactive digital play. In Playing Nature, Alenda Y. Chang offers groundbreaking methods for exploring this vital overlap. Arguing that games need to be understood as part of a cultural response to the growing ecological crisis, Playing Nature seeds conversations around key environmental science concepts and terms. Chang suggests several ways to rethink existing game taxonomies and theories of agency while revealing surprising fundamental similarities between game play and scientific work. Gracefully reconciling new media theory with environmental criticism, Playing Nature examines an exciting range of games and related art forms, including historical and contemporary analog and digital games, alternate- and augmented-reality games, museum exhibitions, film, and science fiction. Chang puts her surprising ideas into conversation with leading media studies and environmental humanities scholars like Alexander Galloway, Donna Haraway, and Ursula Heise, ultimately exploring manifold ecological futures—not all of them dystopian.

The Tactile Eye Jennifer M. Barker,2009-05-27 The Tactile Eye expands on phenomenological analysis and film theory in its accessible and beautifully written exploration of the visceral connection between films and their viewers. Jennifer M. Barker argues that the experience of cinema can be understood as deeply tactile—a sensuous exchange between film and viewer that goes beyond the visual and aural, gets beneath the skin, and reverberates in the body. Barker combines analysis of embodiment and phenomenological film theory to provide an expansive description of cinematic tactility. She considers feminist experimental film, early cinema, animation, and horror, as well as classic, modernist, and postmodern cinema; films from ten national cinemas; and work by Chuck Jones, Buster Keaton, the Quay Brothers, Satyajit Ray, Carolee Schneemann, and Tom Tykwer, among others.
